ACKNOWLEDGMENTS

This report was prepared by Alma Vigil and Nima Rahimi of Mathematica for the U.S. Department of Agriculture's Food and Nutrition Service (FNS), Office of Policy Support. Many individuals made important contributions to this report. Linda Molinari, Xiaofan Sun, and Hanzhi Zhou of Mathematica provided programming support; John Carlo Maula, Bernadette Hicks, and Andrew Wen of Mathematica collected information for the report; John Carlo Maula also assisted with the report tables; Karen Cunyningham, Joshua Leftin, and Andrew Gothro of Mathematica reviewed the report; and Effie Metropoulos, Allison Pinckney, and Sharon Clark of Mathematica provided editing and production support. Yun Song and Girley Wright of the U.S. Department of Health and Human Services, and Dr. Jeffrey Passel of the Pew Hispanic Center provided supplemental data used in the analysis. The authors also thank Aja Weston, Moira Johnston, Catrina Kamau, Jess Luna, Caroline Milliken, Riley Link, Merrit Gillard, and Lauren Badger of FNS for providing guidance and program information.

This work was conducted under contract 12-3198-23-F-0047 with FNS. An electronic version of the report is available at <https://www.fns.usda.gov/research-analysis>.

EXECUTIVE SUMMARY

The Supplemental Nutrition Assistance Program (SNAP) provides nutrition assistance to eligible low-income individuals and households in need. SNAP is the largest of the domestic nutrition assistance programs administered by the Food and Nutrition Service (FNS) of the U.S. Department of Agriculture (USDA). In an average month in FY 2022, 41.2 million people received benefits.

The participation rates in this report are estimates of the percentage of individuals who were eligible for SNAP benefits under Federal income and resource rules that chose to participate in the program. Of the 38 million individuals eligible for SNAP in an average month during this period, nearly 34 million (88 percent) participated, and nearly 5 million did not. The FY 2022 participant total presented in this report differs from the official participation total of 41.2 million because it excludes certain individuals, such as those who lived in Guam and the Virgin Islands; those who were categorically eligible under State policies and did not meet the Federal SNAP income or resource rules; and those who received temporary disaster benefits. The individual participation rate increased by 7 percentage points— from 81 to 88 percent—from pre-pandemic FY 2020 to FY 2022.

The neediest individuals—those in households with income below the Federal poverty guidelines—participate in SNAP at higher rates than other eligible individuals do. Conversely, eligible individuals in households with incomes above the poverty guidelines participate at lower rates. In FY 2022, 59 percent of eligible individuals in households with income between 101 and 130 percent of the poverty guidelines and just 32 percent of eligible individuals in households with incomes more than 130 percent above the poverty guidelines participated in SNAP (Figure ES.1).

Figure ES.1. The neediest individuals participate in SNAP at higher rates than other eligible individuals, FY 2022

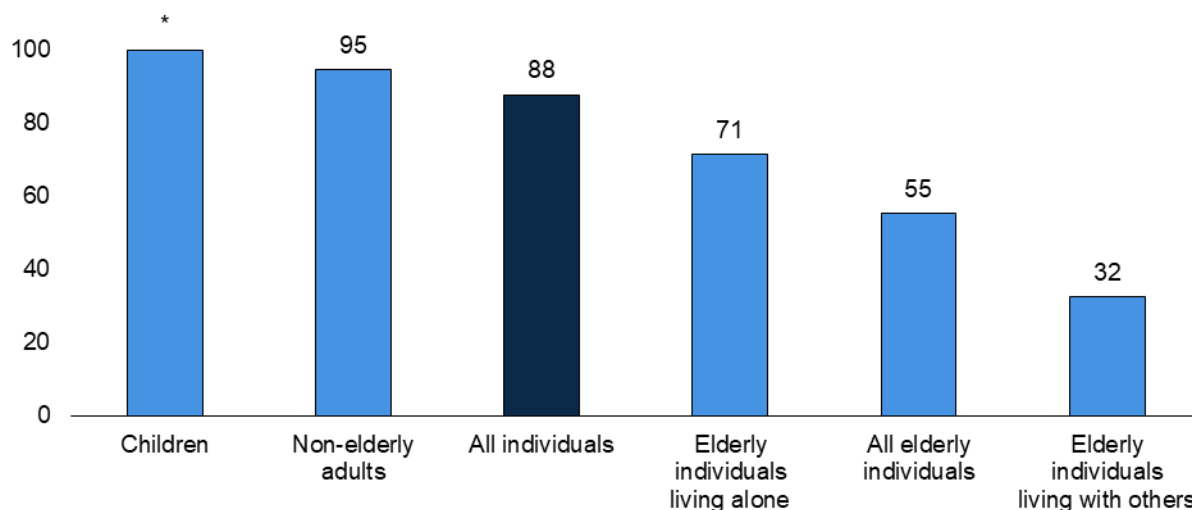

Sources: FY 2022 SNAP Program Operations and SNAP Quality Control data, and 2022 and 2023 Current Population Survey Annual Social and Economic Supplement data.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic that are lower than the corresponding estimates of participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent. See Appendix D for more information.

SNAP participation rates vary by age. The rate for children has historically been relatively high, and remained so in FY 2022. Conversely, just over half (55 percent) of eligible elderly adults (age 60 or older) participated in FY 2022 (Figure ES.2). The rate for elderly individuals living with others was particularly low—less than half the rate for those living alone.

Figure ES.2. Participation rates vary by age and living situation, FY 2022

Sources: FY 2022 SNAP Program Operations and SNAP Quality Control data, and 2022 and 2023 Current Population Survey Annual Social and Economic Supplement data.

Participation rates also vary by source of income. The participation rate for individuals in households without earned income (95 percent) is higher than the overall rate, and the rate for individuals in households with earned income (76 percent) is lower than the overall rate (Figure ES.3). The participation rate for individuals in households receiving Supplemental Security Income (SSI) benefits is similar to the overall participation rate. However, participation rates are lower than the national rate for individuals in households receiving Social Security (73 percent) or Temporary Assistance for Needy Families (TANF) income (55 percent).

Figure ES.3. Participation rates for individuals vary by household income sources, FY 2022

Sources: FY 2022 SNAP Program Operations and SNAP Quality Control data, and 2022 and 2023 Current Population Survey Annual Social and Economic Supplement data.

In addition to presenting participation rates for FY 2022, this report presents rates for the FY 2020 pre-pandemic period, defined as October 2019 through February 2020. The FY 2020 rates include only the pre-pandemic months due to data limitations related to the COVID-19 public health emergency.

We used methodologically similar approaches to estimate the pre-pandemic FY 2020 and FY 2022 participation rates. However, the COVID-19 public health emergency affected FY 2020 SNAP Quality Control (QC) data collection. As a result, the pre-pandemic FY 2020 rates are based on five months of data (October 2019 through February 2020) while the FY 2022 rates are based on the full twelve months of the fiscal year. Because of seasonality both in the data and introduced by our methodology, readers should use caution when comparing the pre-pandemic FY 2020 and FY 2022 participation rates. Specifically, using five rather than twelve months of data resulted in an overestimate of SNAP eligibility and thus an underestimate of the SNAP participation rate in pre-pandemic FY 2020. In addition, the FY 2020 participation rates presented in this report differ from those in Vigil (2022) because we re-estimated the FY 2020 estimates using new Current Population Survey (CPS) Annual Social and Economic Supplement (ASEC) weights that reflect the 2020 Census. Consequently, the rates in this report should not be compared to those in Vigil (2022).

We estimated participation rate denominators—the numbers of eligible individuals—from the CPS ASEC data. To estimate FY 2022 SNAP eligibility, we used the 2022 and 2023 CPS ASEC. Because SNAP participation is underreported in survey data, we estimated participation rate numerators—the numbers of participants—from SNAP Quality Control (QC) data. Differences between the CPS ASEC and SNAP QC data resulted in some estimated participation rates exceeding 100 percent. These differences reflect who is represented in the data, what household composition data are available, when and how income is reported, and the extent to which program participation is reported.

INTRODUCTION

The Supplemental Nutrition Assistance Program (SNAP) provides nutrition assistance to eligible low-income individuals and households in need. In fiscal year (FY) 2022, SNAP provided \$114 billion in annual benefits to an average of 41.2 million people per month.¹

Most individuals whose income and resources fall below certain thresholds are eligible for SNAP. Others are categorically eligible because they live in pure public assistance households. These are households in which each member receives Supplemental Security Income (SSI); Temporary Assistance for Needy Families (TANF) cash benefits; or, in some States, General Assistance cash benefits. The individual and household participation rates in this report are estimated percentages of individuals and households that were eligible for SNAP under Federal income and resource rules that chose to participate in the program. The benefit receipt rates indicate the amount of benefits received as a proportion of total benefits that would have been paid if every eligible household had participated. Some individuals may be eligible for SNAP because they meet other, broader State criteria for categorical eligibility. However, those eligible solely based on State criteria are not included in these estimates.

For this report, we estimated participation rates for the pre-pandemic period in FY 2020 and the full fiscal year in FY 2022. The COVID-19 public health emergency affected the quality of the SNAP Quality Control (QC) data for FY 2020, which are used to estimate the participation rate numerators. Specifically, FNS granted States temporary waivers for conducting QC reviews starting in March 2020. Very few States collected SNAP QC data from March 2020 to May 2020. Most States opted to conduct QC reviews from June 2020 through September 2020, although FNS was unable to provide its usual level of oversight of the sampling procedures. Furthermore, monthly State samples for this time period were often smaller than usual. In addition, economic and program circumstances changed during the public health emergency. For these reasons, we estimated FY 2020 rates for the pre-pandemic period of FY 2020, from October 2019 through February 2020. The public health emergency also affected data collection throughout most of FY 2021. Consequently, the edited FY 2021 SNAP QC data file was limited to three months of data (July 2021 through September 2021). Due to these data limitations, we were unable to estimate participation rates for FY 2021.

We used methodologically similar approaches to estimate the pre-pandemic FY 2020 and FY 2022 participation rates. However, the pre-pandemic FY 2020 rates are based on five months of data while the FY 2022 rates are based on twelve months. Because of seasonality in the estimates, using five rather than twelve months of data resulted in an overestimate of SNAP eligibility and thus an underestimate of the SNAP participation rate in pre-pandemic FY 2020. As a result, readers should use caution when interpreting the pre-pandemic FY 2020 participation rates and when comparing to the FY 2022 participation rates.

We estimated participation rate denominators from the Current Population Survey (CPS) Annual Social and Economic Supplement (ASEC) data. Both the FY 2020 and FY 2022 estimates presented in this report use CPS ASEC weights that reflect the 2020 Census. To

¹ The FY 2022 participant total presented elsewhere in this report differs from the official participation total of 41.2 million because it excludes certain individuals, such as those who (1) lived in Guam and the Virgin Islands, (2) were categorically eligible under State policies and did not meet the Federal SNAP income or resource rules, or (3) received temporary disaster benefits. Appendix D has more information.

estimate FY 2022 SNAP eligibility, we used the 2022 and 2023 CPS ASEC. To estimate pre-pandemic FY 2020 SNAP eligibility, we used the 2020 and 2021 CPS ASEC.

Readers should note that the FY 2020 participation rates presented in this report differ from those in Vigil (2022). We re-estimated the FY 2020 participation rates using new CPS ASEC weights that reflect the 2020 Census.

Because SNAP participation is underreported in survey data, we estimated participation from SNAP Quality Control (QC) data. Differences between the CPS ASEC and SNAP QC data resulted in some estimated participation rates exceeding 100 percent. These differences reflect who is represented in the data, what household composition data are available, when and how income is reported, and the extent to which program participation is reported.

In Appendix A, we present detailed tables showing the participation rates for FY 2022. In Appendix B, we present detailed tables showing the revised participation rates for pre-pandemic FY 2020. Tables showing historical SNAP participation rates appear in Appendix C. In Appendices D and E, we explain the methodology used to develop the rates and the sampling error of the participation rate estimates, respectively. Appendix F presents historical economic and policy influences on SNAP. In Appendix G, we outline SNAP eligibility policies from 1976 to 2022. Appendix H lists all previous reports in this series.

ESTIMATED PARTICIPATION RATES FOR FY 2022

In an average month in FY 2022, approximately 38 million individuals were eligible for SNAP under Federal rules. Of those, nearly 34 million participated in the program (Table 1).² The individual participation rate was 88 percent, and the household rate was 4 percentage points higher, at 92 percent. SNAP participation rates varied by demographic and economic subgroup (Table 2; Figure 1). Historically, the neediest individuals have participated at higher rates than other eligible individuals. The same pattern held in FY 2022. Conversely, eligible individuals in households with incomes above the poverty guidelines participate at lower rates. The participation rate for individuals in households without earned income (95 percent) is higher than the overall rate, and the rate for individuals in households with earned income (76 percent) is lower than the overall rate. Only 34 percent of individuals who were eligible for the minimum benefit or less participated in FY 2022; these individuals have higher incomes on average than other SNAP households do.³

Figure 1. Individual participation rate estimates by subgroup, FY 2022

Sources: FY 2022 SNAP Program Operations and SNAP Quality Control data, and 2022 and 2023 Current Population Survey Annual Social and Economic Supplement data.

* We do not report estimated rates higher than 100 percent. See Appendix D for more information.

² All tables are at the end of the main text.

³ The minimum benefit is applicable only to one- and two-person households.

Elderly individuals (age 60 or older) typically participate in SNAP at lower-than-average rates—55 percent in FY 2022. Among this group, the participation rate for those living alone (71 percent) was more than twice that of those living with others (32 percent) (Table 2; Figure 1). Social Security recipients, a group that typically includes many elderly individuals, also participate at lower-than-average rates (73 percent). Other groups with participation rates below the FY 2022 national rate (Figure 1) included individuals in households with earned income, those in households with TANF income, noncitizens, and citizen children living with noncitizen adults (76, 55, 50, and 59 percent, respectively). In contrast with the rate for citizen children living with noncitizen adults, the participation rate for children overall has historically been high and remained so in FY 2022.

CHANGES TO PARTICIPATION RATES FROM PRE-PANDEMIC FY 2020 TO FY 2022

The estimated individual participation rate was 81 percent in pre-pandemic FY 2020 and 88 percent in FY 2022 (Table 2). As mentioned in the Introduction, we advise caution when comparing the FY 2020 participation rates to the FY 2022 participation rates because the FY 2020 rates presented in this report are likely underestimated. The FY 2020 participation rates presented in Vigil (2022) similarly underestimated the SNAP participation rate in the pre-pandemic FY 2020 period and should be interpreted with caution.

The number of SNAP participants was 32.9 million in FY 2020 and 33.6 million in FY 2022 (Table 3; Figure 2). The increase in participation might be related to policies that States implemented in response to the COVID-19 public health emergency, such as applying for waivers to forgo eligibility interviews or extend certification periods. SNAP benefits also increased from both COVID-19 emergency allotments and a reevaluation of the Thrifty Food Plan. The estimated number of eligible individuals was 40.8 million in FY 2020 and 38.3 million in FY 2022. As noted, some of the decrease in estimated SNAP eligibility may be an artifact of using only five months that overestimated SNAP eligibility in that fiscal year.

Figure 2. Participating individuals and eligible individuals, pre-pandemic FY 2020 and FY 2022

Sources: SNAP Program Operations data; SNAP Quality Control data; Current Population Survey Annual Social and Economic Supplement data for the years shown.

Note: FY 2020 findings are for the pre-pandemic period (October 2019 to February 2020).

TRENDS IN PARTICIPATION RATES FOR SUBGROUPS

Similar to the overall participation rate, many demographic and economic subgroups had higher estimated participation rates in FY 2022 than in FY 2020. However, patterns in the participation rate levels for subgroups relative to the national average remained similar across the two years.

Similar to FY 2020, elderly individuals participated at a lower-than-average rate in FY 2022 while non-elderly individuals participated at a higher-than-average rate in FY 2022 (Figure 3). The participation rates for elderly individuals, overall and whether living alone or with others, remained below the national average participation rate in both FY 2020 and FY 2022. Among elderly individuals, those living alone participate at the highest rate, 71 percent in FY 2022. In contrast, the participation rate for non-elderly adults remained above the national average participation rate in both periods, at 84 percent in FY 2020 and 95 percent in FY 2022. The increase for non-elderly adults may be driven by the large increase in the estimated participation rate for adults ages 18–49 without disabilities living in childless households.

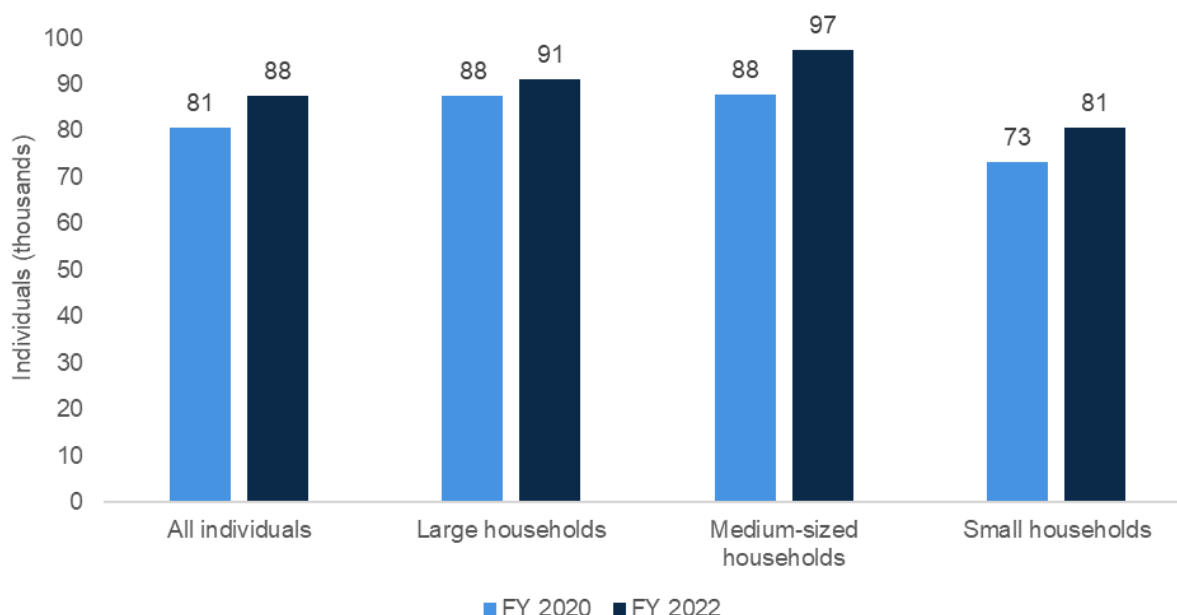

Figure 3. Participation rates for all individuals and selected subgroups, pre-pandemic FY 2020 and FY 2022

Sources: SNAP Program Operations data; SNAP Quality Control data; Current Population Survey Annual Social and Economic Supplement data for the years shown.

Participation rates varied by household size in pre-pandemic FY 2020 and FY 2022 (Figure 4). Similar to FY 2020, individuals in small households (one or two members) participated at a lower-than-average rate in FY 2022 and individuals in medium-sized (three or four members) and large households (five or more members) participated at a higher-than-average rate (97 percent and 91 percent, respectively). The participation rate for individuals living in medium-sized households remained the highest relative to the national average – at 9 percentage points higher – while individuals living in large households participated at a rate 3 percentage points higher than the average.

Figure 4. Participation for individuals by household size, pre-pandemic FY 2020 and FY 2022

Sources: SNAP Program Operations data; SNAP Quality Control data Current Population Survey Annual Social and Economic Supplement data for the years shown.

Note: Small households have one or two members; medium-sized households have three or four members; and large households have five or more members. The percentage point change for individuals in large households in the figure is not statistically significant.

In FY 2022, participation rates increased from pre-pandemic FY 2020 across most participants grouped by their household countable income as a percentage of poverty guidelines (Table 2). The participation rate among individuals in households with no income remained above the national average and had among the largest estimated increases from FY 2020. The participation rate for individuals in households with income greater than 100 percent of the Federal poverty guidelines similarly experienced a large increase in FY 2022 but remained below the national average participation rate in both FY 2020 and FY 2022. The participation rate for individuals in households that receive the minimum benefit or less continued to participate at among the lowest rates for subgroups we examined.

ESTIMATED BENEFIT RECEIPT RATES IN FY 2022

To calculate benefit receipt rates, we divided the benefits received by participating households by the potential benefits available to the eligible households. We calculated prorated benefit receipt rates for individual-level characteristics in a similar manner, using individuals' prorated benefits (the household benefit divided by the number of people in the household). Given that individuals eligible for larger benefits participate in SNAP at higher rates than those eligible for smaller benefits, prorated benefit receipt rates are higher than individual participation rates (Table 4).

The overall benefit receipt rate and the benefit receipt rate for many subgroups are estimated to be more than 100 percent. This is due to differences in the data sources between the CPS ASEC (used for the rate denominator) and the SNAP QC data (used for the rate numerator) that result in some estimated participation rates exceeding 100 percent. These differences reflect who

is represented in the data, what household composition data are available, when and how income is reported, and the extent to which program participation is reported. Among age groups, elderly individuals had the lowest individual prorated benefit receipt rate (70 percent), although elderly individuals living alone had a much higher benefit receipt rate than those living with others (33 percent) (Table 4). Similarly, households with elderly members had among the lowest household benefit receipt rates (62 percent) (Table 5). Households with TANF recipients also had a low household benefit receipt rate of 58 percent. Noncitizens and citizen children living with noncitizen adults had lower-than-average prorated benefit receipt rates of 62 percent and 72 percent, respectively (Table 4). Households with income at 101 to 130 percent of poverty had a benefit receipt rate of about 77 percent of the benefits for which they were eligible (Table 5).

Although the benefit receipt rates tend to be higher than household participation rates, this was not always the case in FY 2022. Households with non-elderly adults with disabilities and those with TANF recipients had benefit receipt rates (93 and 58 percent, respectively) that were lower than household participation rates (more than 100 percent and 63 percent, respectively) (Table 5).

METHODOLOGY

This report presents participation rates for FY 2022 and pre-pandemic FY 2020. We used methodologically similar approaches to estimate the pre-pandemic FY 2020 and FY 2022 participation rates. However, the COVID-19 public health emergency affected FY 2020 SNAP QC data collection. As a result, the pre-pandemic FY 2020 rates are based on five months of data (October 2019 through February 2020) while the FY 2022 rates are based on the full twelve months of the fiscal year. Because of seasonality both in the data and introduced in our methodology, readers should use caution when interpreting the pre-pandemic FY 2020 and comparing them to the FY 2022 participation rates. Specifically, using five rather than twelve months of data resulted in an overestimate of SNAP eligibility and thus an underestimate of the SNAP participation rate in pre-pandemic FY 2020. For more information, see Appendix D, Section A.5. In addition, the FY 2020 participation rates in Vigil (2022) should not be compared with the FY 2022 rates because we re-estimated the FY 2020 estimates using new CPS ASEC weights that reflect the 2020 Census. The FY 2020 participation rates presented in Vigil (2022) similarly underestimated the SNAP participation rate in the pre-pandemic FY 2020 period and should be interpreted with caution.

We estimated the number of eligible individuals with a microsimulation model, using two combined years of CPS ASEC data to simulate SNAP eligibility in an average month within the fiscal year. Because the CPS ASEC collects household income data for the previous calendar year, for the FY 2022 estimates we used data from the 2022 CPS ASEC to simulate October through December 2021 and data from the 2023 CPS ASEC to simulate January through September 2022. For the FY 2020 estimates, we used data from the 2020 CPS ASEC to simulate October through December 2019 and data from the 2021 CPS ASEC to simulate January through February 2020.

In the simulation procedure, we applied Federal SNAP eligibility policies to each household in the CPS ASEC. These policies included SNAP household formation rules, gross and net income thresholds, and resource limits. We also considered State-specific policies on vehicle assessment when determining household resources. We imputed some information that is

unavailable in the CPS ASEC, such as citizenship status, net income amounts, and resource eligibility. We describe the methodology in detail in Appendix D.

The numerator of the SNAP participation rate is the average monthly number of participants during the fiscal year. We used the FY 2022 SNAP QC data file to estimate the number of eligible SNAP participants. This file is an edited version of the raw data file generated by the SNAP Quality Control System and contains data on the demographic and economic characteristics of a sample of participating households.

We used the SNAP Statistical Summary of Operations (Program Operations) data to weight the SNAP QC data. The Program Operations data provide counts of individuals and households who were issued benefits and the total dollar value of benefits in each month. Before weighting, we adjusted the Program Operations data to exclude participants who are not represented in the SNAP QC data. This includes individuals who received benefits in error and individuals who received temporary disaster benefits in the wake of events such as hurricanes and floods that result in a Major Disaster Declaration with Individual Assistance. In FY 2022, we removed about 7 million individuals for the above-noted reasons, amounting to about 16 percent of individuals in the Program Operations data.

We also excluded 5.6 million categorically eligible participants from the official rates because they did not meet the Federal SNAP income or resource rules. Because limitations of the SNAP QC data prevent us from identifying participating households with resources above the Federal limits, we used a regression equation based on data from the Survey of Income and Program Participation (SIPP) to predict resource ineligibility. Finally, we removed households in Guam and the Virgin Islands because the CPS ASEC does not include them.

Table 1. Estimated individual and household participation rates and benefit receipt rates, FY 2022

	Participating (000)	Eligible (000)	Participation rate (percent) with 90 percent confidence interval
Individuals	33,551	38,279	88 +/- 1.5
SNAP households	17,736	19,362	92 +/- 1.6
Benefits (in dollars)	5,664,397	*	* +/-

Sources: FY 2022 SNAP Program Operations; FY 2022 SNAP Quality Control; and 2022 and 2023 Current Population Survey Annual Social and Economic Supplement data.

Note: Participating and eligible totals are monthly averages. The participant totals in this table do not include participants who received temporary disaster benefits or were ineligible for SNAP. Some categorically eligible participants who were not eligible under the Federal rules are also excluded. The eligible totals include only those eligible for SNAP under Federal income or resource rules.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic or of potential benefits to eligible individuals that are lower than the corresponding estimates of participants or benefits received by participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

Table 2. Estimated SNAP individual participation rates by characteristics, pre-pandemic FY 2020 and FY 2022

	Participation rate (percent)		
	Pre-pandemic FY 2020	FY 2022	Difference with 90 percent confidence interval
All individuals	81	88	7.1 +/- 1.8†
Household size			
Small (1 or 2 members)	73	81	7.5 +/- 2.4†
Medium (3 or 4 members)	88	97	9.3 +/- 6.7†
Large (5 or more members)	88	91	3.8 +/- 11.3
Age

Sources: SNAP Program Operations data; SNAP Quality Control data; Current Population Survey Annual Social and Economic Supplement data for the years shown.

Note: Readers should use caution when interpreting the pre-pandemic FY 2020 rates and comparing them to the FY 2022 participation rates.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic that are lower than the corresponding estimates of participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals. See Appendix D for more information.

† Indicates significance at the .10 level using a two-tailed t-test.

^a With some exceptions, these participants are subject to work requirements and time limits.

^b These estimates do not include noncitizens who are outside the SNAP household but reside in the same dwelling unit.

^c These estimates include citizen children living in a household with a noncitizen adult, regardless of SNAP participation or eligibility of the adult.

^d These income sources are not mutually exclusive.

Table 3. Estimated number of eligible and participating individuals and households, benefits, and participation rates, pre-pandemic FY 2020 and FY 2022

	Pre-pandemic FY 2020	FY 2022
Participating individuals		
Total (000)	32,883	33,551
Eligible individuals		
Total (000)	40,807	38,279
Households (000)		
Participating	16,740	17,736
Eligible	20,165	19,362
Benefits (\$000)		
Benefits received by participants	4,024,533	5,664,397
Potential benefits to eligible individuals	*	*
Participation rate (percent)		
Individual rate	80.6	87.6
Household rate	83.0	91.6
Benefit receipt rate (percent)	*	*

Sources: SNAP Program Operations data; SNAP Quality Control data; Current Population Survey Annual Social and Economic Supplement data for the years shown.

Note: Participating and eligible totals are monthly averages. The participant totals in this table do not include participants who received temporary disaster benefits or were ineligible for SNAP. Some categorically eligible participants who were not eligible under the Federal rules are also excluded. The eligible totals include only those eligible for SNAP under Federal income or resource rules.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic or of potential benefits to eligible individuals that are lower than the corresponding estimates of participants or benefits received by participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

Table 4. Estimated participation rates and benefit receipt rates, by individual-level demographic characteristics, FY 2022

Demographic characteristic	Individual participation rate (percent)	Pro-rated benefit receipt rate (percent)
Age		
Children (age 17 or younger)	*	*
Non-elderly adults (ages 18–59)	95	*
Elderly individuals (age 60 or older)	55	70
Living alone	71	*
Not living alone	32	33
Noncitizens^a	50	62
Citizen children living with noncitizen adults^b	59	72
Employment status of non-elderly adults		
Employed	78	98
Not employed	*	*

Sources: FY 2022 SNAP Program Operations; FY 2022 SNAP Quality Control, and 2022 and 2023 Current Population Survey Annual Social and Economic Supplement data.

Note: An individual's prorated benefits are calculated by dividing the household benefit by the number of people in the household. Benefit receipt rates by individual-level characteristics are calculated by summing the prorated benefits of individuals with the selected characteristic.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic or of potential benefits to eligible individuals that are lower than the corresponding estimates of participants or benefits received by participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

^a These estimates do not include noncitizens who are outside the SNAP household but reside in the same dwelling unit.

^b These estimates include citizen children living in a household with a noncitizen adult, regardless of SNAP participation or eligibility of the adult.

APPENDIX A

DETAILED PARTICIPATION RATE ESTIMATES FOR FY 2022

Table A.1. Estimated individual and household participation rates and benefit receipt rates, FY 2022

	Participating (QC)	Eligible (CPS)	Participation rate (QC/CPS)
Individuals	33,551,236	38,278,702	87.6
SNAP households	17,736,470	19,362,488	91.6
Benefits	5,664,396,632	*	*

Sources: SNAP Program Operations; SNAP Quality Control; Current Population Survey Annual Social and Economic Supplement data.

Note: Participating and eligible totals are monthly averages. The participant totals in this table do not include participants who received disaster assistance or were ineligible for SNAP. Some categorically eligible participants who were not eligible under the Federal rules are also excluded. The eligible totals include only those eligible for SNAP under Federal income or resource rules.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic or of potential benefits to eligible individuals that are lower than the corresponding estimates of participants or benefits received by participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

CPS = Current Population Survey; QC = SNAP Quality Control.

Table A.2. Estimated individual participation rates by household size, FY 2022

	Participating (QC)	Eligible (CPS)	Participation rate (QC/CPS)
Individuals by household size			
1 person	10,483,736	10,536,239	99.5
2 people	5,674,020	9,457,590	60.0
3 people	5,924,813	6,151,031	96.3
4 people	5,470,793	5,574,179	98.1
5 people	3,247,750	3,428,037	94.7
6 or more people	2,750,124	3,131,627	87.8
Individuals in all households	33,551,236	38,278,702	87.6

Sources: SNAP Program Operations; SNAP Quality Control; Current Population Survey Annual Social and Economic Supplement data.

Note: Participating and eligible totals are monthly averages. The participant totals in this table do not include participants who received disaster assistance or were ineligible for SNAP. Some categorically eligible participants who were not eligible under the Federal rules are also excluded. The eligible totals include only those eligible for SNAP under Federal income or resource rules.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic that are lower than the corresponding estimates of participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

Table A.3. Estimated individual participation rates by demographic characteristics, FY 2022

Demographic characteristic	Participating (QC)	Eligible (CPS)	Participation rate (QC/CPS)
All individuals	33,551,236	38,278,702	87.6
Age			
Children (age 17 or younger)	13,447,178	*	*
Preschool age (ages 0–4)	3,977,308	*	*
School age (ages 5–17)	9,469,870	*	*
Non-elderly adults (ages 18–59)	14,175,654	14,994,238	94.5
Elderly individuals (age 60 or older)	5,928,404	10,712,902	55.3
Living alone	4,501,903	6,308,367	71.4
Not living alone	1,426,501	4,404,535	32.4
Adults ages 18–49 without disabilities in childless households^a	2,971,624	2,979,219	99.7
Noncitizens^b	1,230,971	2,445,108	50.3
Citizen children living with noncitizen adults^c	1,891,027	3,181,808	59.4
Employment status of non-elderly adults			
Employed	3,360,914	4,335,483	77.5
Not employed	10,814,739	*	*
Individuals by household composition			
Living with children	20,834,629	*	*
Single-adult household	12,494,646	*	*
Married-head household	4,113,492	6,395,370	64.3
Other households	4,226,491	4,575,568	92.4
Not living with children	12,716,607	17,937,331	70.9
Gender			
Male	14,322,922	17,086,293	83.8
Female	19,228,314	21,192,409	90.7
Metropolitan status			
Urban	27,698,750	32,069,015	86.4
Rural	5,852,486	6,209,687	94.2

Sources: SNAP Program Operations; SNAP Quality Control; and Current Population Survey Annual Social and Economic Supplement data.

Note: Participating and eligible totals are monthly averages. The participant totals in this table do not include participants who received disaster assistance or were ineligible for SNAP. Some categorically eligible participants who were not eligible under the Federal rules are also excluded. The eligible totals include only those eligible for SNAP under Federal income or resource rules.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic that are lower than the corresponding estimates of participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

^a With some exceptions, these participants are subject to work requirements and time limits.

^b These estimates do not include noncitizens who are outside the SNAP household but reside in the same dwelling unit.

^c These estimates include citizen children living in a household with a noncitizen adult, regardless of SNAP participation or eligibility of the adult.

Table A.4. Estimated individual participation rates by economic characteristics of households, FY 2022

Economic characteristic	Participating (QC)	Eligible (CPS)	Participation rate (QC/CPS)
All individuals	33,551,236	38,278,702	87.6
Household countable income sources^a			
No income	6,522,612	*	*

51 to 100 percent	469,292	1,290,963	36.4
Greater than 100 percent of poverty guidelines	265,406	1,437,134	18.5
101 to 130 percent	209,982	1,025,063	20.5
131 percent or more	55,423	412,071	13.4

Sources: SNAP Program Operations; SNAP Quality Control; Current Population Survey Annual Social and Economic Supplement data.

Note: Participating and eligible totals are monthly averages. The participant totals in this table do not include participants who received disaster assistance or were ineligible for SNAP. Some categorically eligible participants who were not eligible under the Federal rules are also excluded. The eligible totals include only those eligible for SNAP under Federal income or resource rules.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic that are lower than the corresponding estimates of participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

^a These income sources are not mutually exclusive.

Table A.6. Estimated household participation rates, FY 2022

Household characteristic	Participating (QC)	Eligible (CPS)	Participation rate (QC/CPS)
Household composition			
Children (age 17 or younger)	6,314,225	*	*
Single adult	4,149,970	*	*
Married head	911,591	1,427,645	63.9

1 to 50 percent	1,625,648,355	*	*
51 to 100 percent	2,021,782,527	*	*
101 to 130 percent	466,038,072	606,932,062	76.8
131 percent or more	52,856,873	92,043,890	57.4
Monthly SNAP benefit			
Minimum benefit or less	16,652,424	47,824,619	34.8
Greater than the minimum to \$150	295,039,530	398,491,776	74.0
\$151 to \$300	1,784,387,511	*	*
\$301 to \$450	506,811,672	637,456,351	79.5
\$451 to \$600	950,649,555	1,089,502,527	87.3
\$601 or more	2,110,855,941	*	*
Benefits as a percentage of maximum benefit			
1 to 25 percent	79,181,975	192,674,141	41.1
26 to 50 percent	421,535,959	668,171,461	63.1
51 to 75 percent	984,578,510	1,065,406,397	92.4
76 to 99 percent	1,366,833,943	*	*
Maximum (100 percent)	2,812,266,245	*	*

Sources: SNAP Program Operations; SNAP Quality Control; Current Population Survey Annual Social and Economic Supplement data.

Note: The benefit totals are monthly averages. The benefit totals in this table exclude participants who received disaster assistance, replacement benefits, or who were ineligible for SNAP. The potential benefit totals exclude those ineligible for SNAP under Federal SNAP income or resource rules and some categorically eligible participants who did not meet the Federal SNAP income or resource rules. Total potential benefits to eligible households in this table do not exactly match prorated potential benefits to eligible individuals in Table A.8 because of differences between household weights and the sum of individual weights in the Current Population Survey Annual Social and Economic Supplement.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic or of potential benefits to eligible individuals that are lower than the corresponding estimates of participants or benefits received by participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

^a These income sources are not mutually exclusive.

Table A.8. Estimated benefit receipt rates by individual-level demographic characteristics, FY 2022

Demographic characteristic	Prorated benefits received by participating individuals (QC)	Prorated potential benefits to eligible individuals (CPS)	Benefit receipt rate (percent)
All benefits	5,664,396,632	*	*
Age			
Children (age 17 or younger)	2,258,248,712	*	*
Preschool age (ages 0–4)	704,464,542	*	*
School age (ages 5–17)	1,553,784,169	*	*
Non-elderly adults (ages 18–59)	2,559,037,279	*	*
Elderly individuals (age 60 or older)	847,110,641	1,215,653,144	69.7
Living alone	665,340,281	*	*
Not living alone	181,770,360	558,985,628	32.5
Adults ages 18–49 without disabilities in childless households^a	668,602,583	*	*
Noncitizens^b	222,527,723	358,629,056	62.0
Citizen children living with noncitizen adults^c	338,332,706	471,962,563	71.7
Gender			
Male	2,435,254,405	2,443,041,486	99.7
Female	3,229,142,228	*	*
Employment status of non-elderly adults			
Employed	525,754,271	535,077,628	98.3
Not employed	2,033,283,008	*	*

Sources: SNAP Program Operations; SNAP Quality Control; Current Population Survey Annual Social and Economic Supplement data.

Note: The prorated benefit totals are monthly averages. The benefit totals in this table exclude participants who received disaster assistance, replacement benefits, or who were ineligible for SNAP. The potential benefit totals exclude those ineligible for SNAP under Federal SNAP income or resource rules and some categorically eligible participants who did not meet the Federal SNAP income or resource rules. An individual's prorated benefits are calculated by dividing the household benefit by the number of people in the household. Benefit receipt rates by individual-level characteristics are calculated by summing the prorated benefits of individuals with the selected characteristic. Prorated potential benefits to eligible individuals in this table do not exactly match potential benefits to eligible households in Table A.7 because of differences between household weights and the sum of individual weights in the Current Population Survey Annual Social and Economic Supplement.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic or of potential benefits to eligible individuals that are lower than the corresponding estimates of participants or benefits received by participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

^a With some exceptions, these participants are subject to work requirements and time limits.

^b These estimates do not include noncitizens who are outside the SNAP household but reside in the same dwelling unit.

^c These estimates include citizen children living in a household with a noncitizen adult, regardless of SNAP participation or eligibility of the adult.

APPENDIX B

DETAILED PARTICIPATION RATE ESTIMATES FOR PRE-PANDEMIC FY 2020

Note: Participation rate estimates for pre-pandemic FY 2020 presented in Appendix B differ from the estimates presented in Vigil (2022). The estimates in this appendix use CPS ASEC weights that reflect the 2020 Census.

Table B.1. Estimated individual and household participation rates and benefit receipt rates, pre-pandemic FY 2020

	Participating (QC)	Eligible (CPS)	Participation rate (QC/CPS)
Individuals	32,882,855	40,806,758	80.6
SNAP households	16,739,775	20,165,433	83.0
Benefits	4,024,532,989	*	*

Sources: SNAP Program Operations; SNAP Quality Control; Current Population Survey Annual Social and Economic Supplement data.

Note: Participating and eligible totals are monthly averages. The participant totals in this table do not include participants who received disaster assistance or were ineligible for SNAP. Some categorically eligible participants who were not eligible under the Federal rules are also excluded. The eligible totals include only those eligible for SNAP under Federal income or resource rules. The pre-pandemic FY 2020 eligibility totals are likely overestimated due to data limitations, leading to underestimated participation rates. Readers should use caution when interpreting these estimates.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic or of potential benefits to eligible individuals that are lower than the corresponding estimates of participants or benefits received by participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

CPS = Current Population Survey; QC = SNAP Quality Control.

Table B.2. Estimated individual participation rates by household size, pre-pandemic FY 2020

	Participating (QC)	Eligible (CPS)	Participation rate (QC/CPS)
Individuals by household size			
1 person	9,473,616	10,806,752	87.7
2 people	5,424,268	9,516,991	57.0
3 people	6,223,433	7,144,712	87.1
4 people	5,384,091	6,060,543	88.8
5 people	3,378,484	4,169,056	81.0
6 or more people	2,998,963	3,108,705	96.5
Individuals in all households	32,882,855	40,806,758	80.6

Sources: SNAP Program Operations; SNAP Quality Control; Current Population Survey Annual Social and Economic Supplement data.

Note: Participating and eligible totals are monthly averages. The participant totals in this table do not include participants who received disaster assistance or were ineligible for SNAP. Some categorically eligible participants who were not eligible under the Federal rules are also excluded. The eligible totals include only those eligible for SNAP under Federal income or resource rules. The pre-pandemic FY 2020 eligibility totals are likely overestimated due to data limitations, leading to underestimated participation rates. Readers should use caution when interpreting these estimates.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic that are lower than the corresponding estimates of participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

Table B.3. Estimated individual participation rates by demographic characteristics, pre-pandemic FY 2020

Demographic characteristic	Participating (QC)	Eligible (CPS)	Participation rate (QC/CPS)
All individuals	32,882,855	40,806,758	80.6
Age			
Children (ages 17 or younger)	14,011,918	14,162,468	98.9
Preschool age (ages 0–4)	4,094,464	*	*
School age (age 5–17)	9,917,453	10,096,213	98.2
Non-elderly adults (ages 18–59)	13,752,341	16,405,667	83.8
Elderly individuals (age 60 or older)	5,118,596	10,238,623	50.0
Living alone	3,851,765	6,153,574	62.6
Not living alone	1,266,831	4,085,049	31.0
Adults ages 18–49 without disabilities in childless households^a	2,323,646	3,107,863	74.8
Noncitizens^b	1,147,253	2,140,029	53.6
Citizen children living with noncitizen adults^c	2,248,359	3,405,785	66.0
Employment status of non-elderly adults			
Employed	3,716,475	5,211,727	71.3
Not employed	10,034,181	11,193,940	89.6

Sources: SNAP Program Operations; SNAP Quality Control; Current Population Survey Annual Social and Economic Supplement data.

Note: Participating and eligible totals are monthly averages. The participant totals in this table do not include participants who received disaster assistance or were ineligible for SNAP. Some categorically eligible participants who were not eligible under the Federal rules are also excluded. The eligible totals include only those eligible for SNAP under Federal income or resource rules. The pre-pandemic FY 2020 eligibility totals are likely overestimated due to data limitations, leading to underestimated participation rates. Readers should use caution when interpreting these estimates.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic that are lower than the corresponding estimates of participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

^a These income sources are not mutually exclusive.

Table B.6. Estimated household participation rates, pre-pandemic FY 2020

Household characteristic	Participating (QC)	Eligible (CPS)	Participation rate (QC/CPS)
Household composition			
Children (age 17 or younger)	6,448,663	6,496,827	99.3
Single-adult	4,124,477	*	*
Married-head	958,548	1,672,819	57.3
Other	1,365,638	1,491,807	91.5
No children	10,291,113	13,668,606	75.3
Households containing:			
Elderly individuals	4,642,724	8,911,117	52.1
Non-elderly adults with disabilities	3,882,232	3,945,342	98.4
Adults ages 18–49 without disabilities and no children ^a	2,187,588	2,393,881	91.4

Benefits as a percentage of maximum benefit			
1 to 25 percent	90,301,000	214,257,379	42.1
26 to 50 percent	356,781,107	491,252,021	72.6
51 to 75 percent	692,328,215	*	*
76 to 99 percent	945,141,170	*	*
Maximum (100 percent)	1,939,981,497	*	*

Sources: SNAP Program Operations; SNAP Quality Control; Current Population Survey Annual Social and Economic Supplement data.

Note: The benefit totals are monthly averages. The benefit totals in this table exclude participants who received disaster assistance, replacement benefits, or who were ineligible for SNAP. The potential benefit totals exclude those ineligible for SNAP under Federal SNAP income or resource rules and some categorically eligible participants who did not meet the Federal SNAP income or resource rules. Total potential benefits to eligible households in this table do not exactly match prorated potential benefits to eligible individuals in Table B.8 because of differences between household weights and the sum of individual weights in the Current Population Survey Annual Social and Economic Supplement. The pre-pandemic FY 2020 potential benefit totals are likely overestimated due to data limitations, leading to underestimated benefit receipt rates. Readers should use caution when interpreting these estimates.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic or of potential benefits to eligible individuals that are lower than the corresponding estimates of participants or benefits received by participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

^a These income sources are not mutually exclusive.

Table B.8. Estimated benefit receipt rates by individual-level demographic characteristics, pre-pandemic FY 2020

Demographic characteristic	Prorated benefits received by participating individuals (QC)	Prorated potential benefits to eligible individuals (CPS)	Benefit receipt rate (percent)
All benefits	4,024,532,989	4,040,957,015	99.6
Age			
Children (age 17 or younger)	1,687,728,887	*	*
Preschool age (ages 0–4)	526,801,822	*	*
School age (ages 5–17)	1,160,927,065	*	*
Non-elderly adults (ages 18–59)	1,801,997,159	*	*
Elderly individuals (age 60 or older)	534,806,943	786,339,867	68.0
Living alone	426,854,825	457,266,680	93.3
Not living alone	107,952,118	329,073,187	32.8
Adults ages 18–49 without disabilities in childless households^a	399,949,037	*	*
Noncitizens^b	144,559,428	211,928,868	68.2
Citizen children living with noncitizen adults^c	284,543,148	347,665,062	81.8
Gender			
Male	1,740,893,732	1,787,261,037	97.4
Female	2,283,639,257	*	*
Employment status of non-elderly adults			
Employed	409,616,682	419,376,199	97.7
Not employed	1,392,063,634	*	*

Sources: SNAP Program Operations; SNAP Quality Control; Current Population Survey Annual Social and Economic Supplement data.

Note: The prorated benefit totals are monthly averages. The benefit totals in this table exclude participants who received disaster assistance, replacement benefits, or who were ineligible for SNAP. The potential benefit totals exclude those ineligible for SNAP under Federal SNAP income or resource rules and some categorically eligible participants who did not meet the Federal SNAP income or resource rules. An individual's prorated benefits are calculated by dividing the household benefit by the number of people in the household. Benefit receipt rates by individual-level characteristics are calculated by summing the prorated benefits of individuals with the selected characteristic. Prorated potential benefits to eligible individuals in this table do not exactly match potential benefits to eligible households in Table B.7 because of differences between household weights and the sum of individual weights in the Current Population Survey Annual Social and Economic Supplement. The pre-pandemic FY 2020 potential benefit totals are likely overestimated due to data limitations, leading to underestimated benefit receipt rates. Readers should use caution when interpreting these estimates.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic or of potential benefits to eligible individuals that are lower than the corresponding estimates of participants or benefits received by participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

^a With some exceptions, these participants are subject to work requirements and time limits.

^b These estimates do not include noncitizens who are outside the SNAP household but reside in the same dwelling unit.

^c These estimates include citizen children living in a household with a noncitizen adult, regardless of SNAP participation or eligibility of the adult.

APPENDIX C

HISTORICAL SNAP PARTICIPATION RATE ESTIMATES

Table C.1. Estimated number of eligible and participating individuals, households, and benefits, and participation rates, 1976 to FY 2022

	Eligible (000)			Participating (000)			Participation rates (percent)		
	Individuals	Households	Benefits (\$)	Individuals	Households	Benefits (\$)	Individuals	Households	Benefits
September 1976 ^a	50,061	16,282	\$1,075,819	15,880	5,308	\$375,461	31.7	32.6	34.9

Sources: SNAP Program Operations, SNAP Quality Control, and Current Population Survey Annual Social and Economic Supplement data for the years shown.

Note: Participating and eligible totals are monthly averages. There are two estimates for some years because of revisions to the methodology or changes to the Current Population Survey Annual Social and Economic Supplement. Estimates are methodologically consistent with the other estimates between the same horizontal lines (for example, the FY 2016(b) to pre-pandemic FY 2020(a) estimates). Readers should not compare the pre-pandemic FY 2020(b) and FY 2022 estimates to any prior estimates. In addition, readers should use caution when interpreting the 2020(b) estimates and comparing them to the FY 2022 estimates.

The totals in this table do not include participants who received disaster assistance or were ineligible for SNAP. Some categorically eligible participants who were not eligible under the Federal rules are also excluded. See Appendix D for details.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic or of potential benefits to eligible individuals that are lower than the corresponding estimates of participants or benefits received by participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

^a The benefit rates for 1976 and 1978 are based on the net benefit amount left after subtracting the amount paid for food stamps (see Table G.3H for a description of the purchase requirement) and thus are consistent throughout these years.

^b All fiscal year numbers are average monthly values.

Table C.2. Change in estimated individual SNAP participation rates, 1988 to 2022

Time period	Change in participation rate	Change in participants (percent)	Change in eligible individuals (percent)
1988 to 1990	6.1 points	11.1	-1.4
1990 to 1991	2.8 points	14.6	8.9
1991 to 1992	2.3 points	10.3	6.1
1992 to 1993	1.0 points	5.8	4.1
1993 to 1994	1.1 points	-0.2	-2.0
1994 to 1995	-2.1 points	-3.9	-1.1
1995 to 1996	-3.5 points	-5.3	-0.5
1996 to 1997	-5.2 points	-14.7	-7.7
1997 to 1998	-4.2 points	-10.9	-4.6
1998 to 1999	-1.9 points	-5.9	-2.8
FY 1999 to FY 2000	-0.7 points	-5.7	-4.5
FY 2000 to FY 2001	-2.8 points	0.8	6.0
FY 2001 to FY 2002(a)	-0.1 points	9.9	10.1
FY 2002(b) to FY 2003	2.4 points	11.4	6.7
FY 2003 to FY 2004	5.4 points	12.2	2.4
FY 2004 to FY 2005	3.1 points	6.1	1.1
FY 2005 to FY 2006	4.0 points	2.6	-3.4
FY 2006 to FY 2007	-0.4 points	1.3	1.9
FY 2007 to FY 2008	2.1 points	6.9	3.8
FY 2008 to FY 2009	1.6 points	18.1	15.4
FY 2010 to FY 2011	6.3 points	8.6	-0.2
FY 2011 to FY 2012	5.1 points	3.5	-2.8
FY 2012 to FY 2013	2.2 points	2.6	0.0
FY 2013 to FY 2014	-2.3 points	-2.2	0.6
FY 2014 to FY 2015	0.1 points	-1.8	-1.9
FY 2015 to FY 2016(a)	1.7 points	-4.0	-5.9
FY 2016(a) to FY 2017(a)	-1.0 points	-5.2	-4.0
FY 2016(b) to FY 2017(b)	-1.0 points	-5.3	-4.1

FY 2018 to FY 2019	-0.6 points	-5.9	-5.2
FY 2019 to pre-pandemic FY 2020(a)	-3.5 points	-2.9	1.5
Pre-pandemic FY 2020(b) to FY 2022	7.1 points ^a	2.0	-6.2 ^a

Sources: SNAP Program Operations, SNAP Quality Control, and Current Population Survey Annual Social and Economic Supplement data for the years shown.

Note: There were revisions to the methodology or data in 1994, 1999, FY 2002, FY 2010, FY 2016 and pre-pandemic FY 2020. For years with multiple estimates shown, the rate calculated with the revised methodology is used for comparison with the year after the change in methodology. For example, the original 1994 estimate is used to calculate the change between 1993 and 1994, whereas the revised 1994 estimate is used to calculate the change between 1994 and 1995.

^a The change in eligible individuals and the participation rate between pre-pandemic FY 2020(b) and FY 2022 should be interpreted with caution. See Appendix D for more details.

Figure C.1. Trends in SNAP participation rate estimates, 1976 to 2022

Sources: SNAP Program Operations data, SNAP Quality Control data, and Current Population Survey Annual Social and Economic Supplement data for the years shown.

Note: There are breaks in the time series for some years because of revisions to the methodology or changes to the Current Population Survey Annual Social and Economic Supplement. Estimates are methodologically consistent with the other estimates between the vertical lines (for example, FY 2016 to pre-pandemic FY 2020). Readers should not compare the pre-pandemic FY 2020 and FY 2022 estimates to any prior estimates. In addition, readers should use caution when interpreting the pre-pandemic FY 2020 and comparing them to the FY 2022 rates.

* We do not report estimated rates higher than 100 percent. See Appendix D for more information.

APPENDIX D
METHODOLOGY

METHODOLOGY

The participation rates in this report are based on estimates of the numbers of individuals who were eligible for and participated in SNAP. Because survey data underreport SNAP participation, we estimated rate numerators from a different data source than rate denominators: we estimated the number of participants using SNAP QC data and the number of eligible individuals from a microsimulation model based on data from the U.S. Census Bureau's CPS ASEC. The resulting participation rates estimate the percentage of individuals who were eligible for SNAP under applicable Federal rules and chose to participate in the program.⁴ The rates do not include individuals eligible solely through State-expanded categorical eligibility policies.

We used methodologically similar approaches to estimate the pre-pandemic FY 2020 and FY 2022 participation rates. However, the COVID-19 public health emergency affected FY 2020 SNAP QC data collection. As a result, the pre-pandemic FY 2020 rates are based on five months of data (October 2019 through February 2020) while the FY 2022 rates are based on the full twelve months of the fiscal year. Using five rather than twelve months of data resulted in an overestimate of SNAP eligibility and thus an underestimate of the SNAP participation rate in pre-pandemic FY 2020. See more information in Section A.5. Determining income eligibility. In addition, the FY 2020 rates in this report differ from those presented in Vigil (2022); the current estimates use new CPS ASEC weights that reflect the 2020 Census. Because of changes to the CPS ASEC weights, readers should not compare the rates in this report with those in earlier published reports.⁵

In this appendix, we describe the methodology used to estimate SNAP eligibility (Section A), SNAP participation (Section B), and SNAP participation rates (Section C) for pre-pandemic FY 2020 and FY 2022. Section D describes differences between the SNAP QC and CPS ASEC data that resulted in some estimated participation rates exceeding 100 percent. In this report, we use an asterisk to indicate estimated rates higher than 100 percent and the associated eligibility estimates.

A. Determining the number of SNAP-eligible individuals

The CPS ASEC provides detailed demographic and economic information on individuals potentially eligible for SNAP in all 50 States and the District of Columbia for the previous calendar year.

We estimated the number of SNAP-eligible individuals with a microsimulation model that combined two years of CPS ASEC data to simulate SNAP eligibility in an average month within

⁴ In FY 2022, about 45,193 individuals participated in the Food Distribution Program on Indian Reservations (FDPIR). Participants in this program are not eligible for SNAP even though many meet the SNAP income and resource eligibility standards. We did not exclude them from estimates of SNAP-eligible individuals, however, because of the substantial error associated with estimating numbers of FDPIR participants in the CPS ASEC. As a result, participation rates are slightly underestimated—by 0.10 percentage points at most.

⁵ We present consistent rates for FY 2016 through pre-pandemic FY 2020 in Vigil (2022), for FY 2010 through FY 2017 in Vigil (2019), for FY 2002 through FY 2009 in Leftin et al. (2011), for FY 1999 through FY 2002 in Wolkwitz (2007), for September 1994 through September 1999 in Cunyngnam (2002), and for September 1976 through August 1995 in Trippe and Cody (1997).

the fiscal year (October to September) for FY 2022 and within the pre-pandemic period in the fiscal year (October to February) for FY 2020. Specifically, for FY 2022, we used data from the 2022 CPS ASEC to simulate October to December 2021 and data from the 2023 CPS ASEC to simulate January to September 2022. For both sets of participation rate estimates presented in this report, we used the CPS ASEC weights and replicate weights that reflect the 2020 Census. Table D.1 lists the unweighted counts of households in the CPS ASEC files that we used for this series of reports. Table D.2 lists unweighted counts of households by their probability of having been eligible in FY 2022. A summary of changes in the CPS ASEC over time is in Table D.3.

In the simulation procedure, we applied SNAP eligibility guidelines to each household in the CPS ASEC. The SNAP guidelines include household formation rules, resource limits, and income limits. Because several types of information necessary for determining SNAP eligibility are missing from the CPS ASEC data, we imputed some information to improve the model estimates of eligible households. We explain this estimation procedure below.

1. Simulating the composition of the SNAP household

We simulated the formation of SNAP households within each CPS ASEC dwelling unit, following SNAP rules about which individuals must apply for SNAP together. Spouses living together must apply together for SNAP, and parents must apply together with their children younger than age 22 who reside with them, even if the children have spouses or children of their own. Beginning in 2015, the CPS ASEC began allowing spouses and unmarried partners to identify as opposite or same sex. In addition, all individuals who share living quarters and purchase and prepare food together must apply together. We assign every member of a CPS ASEC dwelling unit to a SNAP household, even members we later exclude as ineligible, as described below.

The CPS ASEC defines dwelling units according to shared living quarters but does not identify who applies for SNAP together. Therefore, we imputed SNAP household formation following the rules described previously. In most cases, we simulated all members of a dwelling unit as being in the same SNAP household; for the relatively small percentage of households with multiple families or unrelated individuals, however, we sometimes simulated two or more groups of people to form separate SNAP households. We did so according to patterns observed in our SIPP-based microsimulation model, which contained information on how dwelling unit members shared food expenses.

According to Federal SNAP eligibility criteria, certain groups of people are ineligible for SNAP. We simulate this ineligibility by excluding the following individuals from SNAP households:

- Individuals living in group quarters
- Full-time postsecondary students who were ages 18–49 and did not have a disability, TANF income, or children younger than age 6 (but not full-time postsecondary students who were married with children younger than age 12 or working at least 20 hours per week)

- Any individual living in a household headed by a member of the armed forces⁶
- Certain noncitizens, as described in Section A.2
- Certain adults who were ages 18–49, did not have a disability or live with a household member younger than age 18, were subject to work registration, and had reached the time limit for receiving SNAP benefits, as described in Section A.2

To match household composition patterns in the SNAP QC data file more closely, our SNAP household formation methodology allowed a small number of child-only SNAP households to be headed by an older teen if that individual was not living with a parent and not related to the household head. We ensured unmarried parents living together formed a single SNAP household with their children.

2. Identifying ineligible noncitizens and adults ages 18–49 without disabilities in childless households

The Personal Responsibility and Work Opportunity Reconciliation Act of 1996 (PRWORA) made most noncitizens ineligible for SNAP. Subsequently, the Agricultural Research, Extension, and Education Reform Act of 1998 and the Farm Security and Rural Investment Act of 2002 restored SNAP eligibility to certain categories of lawfully present noncitizens based on their immigration status, length of time legally in the country, work status, age, disability status, and other criteria.

PRWORA also required many adults who were ages 18–49 and did not have a disability or live with a household member younger than age 18 to work or face three-month time limits on receiving benefits. Adults potentially subject to the time limit are exempt if they participate in certain work activities. The American Recovery and Reinvestment Act of 2009 (ARRA) allowed States to suspend the time limits from April 2009 to September 2010. After September 2010, States that had an unemployment rate higher than 10 percent or did not have sufficient jobs to provide employment were eligible to request further waivers of the time limits. Most recently, the Families First Coronavirus Response Act of 2020 (FFCRA) temporarily and partially suspended the time limit.⁷ In FY 2022, 27 States received a statewide waiver from the time limits, and two States had partial waivers covering certain counties or cities in their States. During the time period covered in this report, States could also provide discretionary exemptions for up to 15 percent of the State’s cases that are subject to the time limit.⁸

⁶ We excluded all individuals living in households headed by members of the armed forces because limitations in the CPS ASEC do not allow us to determine which of these households would be eligible.

⁷ The FFCRA policy is not modeled in the pre-pandemic FY 2020 estimates because it took effect in April 2020.

⁸ The Fiscal Responsibility Act of 2023 (FRA) increased the age for adults 18 or older without a disability or dependents who were subject to time-limited SNAP benefits from 49 to age 50, effective September 1, 2023; rising to age 52 effective October 1, 2023; and rising to age 54 effective October 1, 2024. It also decreased States’ annual allotment of discretionary exemptions and added new groups of individuals exempted from the time limits (homeless individuals, veterans, and certain individuals age 24 or younger who were in foster care). Because the changes did not take effect until September 2023 or later, the FRA was not modeled in the estimation of the participation rates presented in this report.

Because the CPS ASEC does not include all the information required to identify the noncitizens and adults subject to time limits who were ineligible for SNAP, we made assumptions (detailed below) about how many and which of these individuals in our sample remained potentially eligible. To retain sample size, we implemented our eligibility assumptions for these populations through weighting adjustments. The weighting adjustments reflect the probability that a household of a certain composition is eligible for SNAP. Specifically, if a household had one noncitizen, we duplicated the record for that household. In the first copy of the record, we retained the noncitizen in the household and multiplied the household weight by the probability that the noncitizen was eligible for SNAP benefits. In the second copy, we excluded the noncitizen from the household and multiplied the household weight by the probability that the noncitizen was ineligible.

a. Identifying ineligible noncitizens

SNAP eligibility is limited to certain categories of lawfully present noncitizens, who are also subject to the same income and resource limits as regular participants. Unlawfully present noncitizens and noncitizen visitors, such as tourists, students, and those on a temporary work visa, are never eligible for SNAP. The following types of lawfully present noncitizens were eligible for SNAP during the time period covered by this report:

- Noncitizens who had lived legally in the United States for more than five years from their date of entry⁹
- Noncitizens receiving disability benefits, regardless of date of entry
- Noncitizen children younger than age 18, regardless of date of entry
- Noncitizens admitted as refugees or granted asylum or a stay of deportation
- Other groups of noncitizens, including active duty members of the U.S. armed forces, honorably discharged veterans, and dependents of service members and veterans

Some noncitizens are brought to the United States by a sponsor who has signed a legally binding agreement to provide the noncitizen with enough financial support so the noncitizen does not have to rely on public benefits, typically until the noncitizen has 40 quarters of work history or naturalizes. In most cases, when a noncitizen with a sponsor applies for SNAP, a portion of the sponsor's income and resources is deemed to the noncitizen, meaning the income and resources are considered available to the noncitizen and included when determining their eligibility and benefits. This deeming provision applies even if the sponsor receives SNAP. If the sponsor lives in the same household as the sponsored noncitizen, deeming does not apply because the sponsor's income and resources are already counted.

The CPS ASEC distinguishes between citizens and noncitizens but does not specify whether a noncitizen is in the United States lawfully. To simulate some noncitizens as unlawfully present,

⁹ Lawfully present noncitizens also could qualify for benefits by attaining 40 qualifying quarters of work, including work attained by the applicant's spouse (if attained when the applicant was married to the spouse) or parents (if the parents attained the quarters before the applicant turned 18). However, almost all the individuals meeting the work requirement would also have met the five-year residency requirement.

and thus ineligible for SNAP, we randomly assigned unlawfully present immigration status according to estimates of the number of unlawfully present noncitizens in the CPS ASEC.¹⁰ First, we estimated, by State, the probability that a noncitizen was unlawfully present. We defined the probability as the ratio of the estimated number of unlawfully present noncitizens age 18 or older to the total number of foreign-born noncitizens ages 18–64 reported in the CPS ASEC. (Because very few unlawfully present noncitizens are age 65 or older, the numerator of the probability is essentially undocumented noncitizens ages 18–64.)¹¹ We then applied the estimated probabilities to individuals ages 18–64 in order to randomly select unlawfully present noncitizens. To improve the consistency of citizenship status within CPS ASEC households, we recoded as citizens all children who were reported to be noncitizens but were born after their mothers arrived in the United States.

We used CPS ASEC information on noncitizens' ages and years of arrival in the United States to identify those potentially eligible for SNAP, including qualified noncitizens who had been in the country for at least five years, were younger than age 18, or were receiving disability benefits. The CPS ASEC does not include data on whether a noncitizen was admitted as a refugee; to simulate eligibility for refugees, we randomly assigned refugee status by year of entry, according to estimates derived from United States Citizenship and Immigration Services data (Table D.4).

The CPS ASEC also does not include the information required to determine which noncitizens are subject to having a portion of their sponsor's income and resources deemed available and are thus likely either to be ineligible or choose to remove themselves from the SNAP household to avoid negative repercussions for their sponsor. Using data from the New Immigrant Survey, a nationally representative, multicohort, longitudinal study of new legal noncitizens and their children, we estimated that 26.4 percent of lawfully present nonrefugee noncitizens who had been in the country 5 to 10 years had a sponsor who was required to sign an affidavit of support, and lived in a household separate from at least one sponsor. To simulate the sponsor-deeming provisions, we randomly assigned 26.4 percent of noncitizens who had arrived after December 1997 and had been in the country for fewer than 10 years as subject to deeming from a sponsor. (We used 10 years as an approximation of how long it would take to accumulate 40 quarters of work).

We excluded from the SNAP household those noncitizens who did not meet the eligibility requirements, were unlawfully present, or were subject to deeming. We assigned a prorated portion of excluded noncitizens' income to the SNAP household and included their resources in the household's countable resources.

¹⁰ We used Dr. Jeffrey Passel's unpublished estimates, prepared for the Pew Hispanic Center, of the number of undocumented migrants included in the CPS ASEC supplements.

¹¹ Passel and Cohn (2009) estimated that only around 1 percent of unlawfully present noncitizens were age 65 or older.

b. Identifying ineligible adults ages 18–49 without disabilities in childless households subject to time limits

Many working-age SNAP participants are required to register for work, with some exceptions. SNAP participants ages 18–49 who are subject to work registration, living in a SNAP household without children, and not pregnant are restricted to three months of SNAP benefits in any 36-month period unless they (1) work or participate in an employment and training or other work program for at least 20 hours per week or (2) participate in a workfare program for the number of hours equivalent to their SNAP benefit divided by the minimum wage. They are exempt from the three-month time limit if they live in an area that has been approved for a waiver from the time limit or receive a State discretionary exemption.

We identified adults who were ages 18–49 and did not have a disability or live with a household member younger than age 18 by examining basic demographic characteristics in the CPS ASEC. Because it is not possible to determine from the CPS ASEC which of these individuals were ineligible because of time limits, we randomly assigned a percentage of them to be eligible based on estimates of the eligible proportion in each State. We estimated the proportion that had received no more than three months of benefits while not working, with separate estimates for individuals who participated in SNAP in the past year and those who did not, based on SIPP data. We estimated the proportions eligible because of residence in a waiver area, participation in an employment and training program, or receipt of a discretionary exemption based on Federal and State administrative data and, in the case of waiver areas, American Community Survey (ACS) data. Table D.5 presents the percentage of adults ages 18–49 without disabilities in childless households imputed to be eligible, by State, year, and past-year participant status.

3. Simulating SSI and TANF receipt

Because the CPS ASEC underreports SSI and TANF, we simulated SSI and TANF eligibility, participation, and benefits based on program rules and the most recently available administrative data.¹² We imputed resource eligibility for SSI and TANF using equations estimated from our 2011 SIPP-based microsimulation model. We calibrated SSI receipt to administrative totals in the Social Security Administration (SSA) statistical report, using SSA data for December 2022 for the FY 2022 estimates. We calibrated TANF receipt to administrative totals in the Administration for Children and Families (ACF) data file, using FY 2022 ACF data for the FY 2022 estimates. We adjusted the ACF data so that estimates in the ACF file of TANF households with SNAP were consistent with estimates in the SNAP QC data file of SNAP households with TANF.

4. Categorically eligible SNAP households

Certain households are categorically eligible for SNAP and not subject to Federal SNAP income or resource limits. A household is categorically eligible if it is pure public assistance, meaning that all of its members receive SSI, TANF cash benefits, or, where provided, general assistance (GA). In addition, States are required to confer categorical eligibility on SNAP households receiving benefits or services at least 50 percent funded by TANF or Maintenance of

¹² Simulated SSI and TANF program rules are available upon request.

Effort (MOE) funds. States have the option of conferring categorical eligibility on SNAP households receiving benefits or services less than 50 percent funded by TANF or MOE funds. They can also confer categorical eligibility on SNAP households in which one member receives the benefit or service when the State determines that the whole household would benefit.

Many States have broad TANF or MOE-funded programs that provide a simple service or noncash benefit—a brochure on domestic violence, for example—to confer categorical eligibility on a large number of households. These programs are known as broad-based categorical eligibility (BBCE) policies. Forty States had BBCE policies in pre-pandemic FY 2020. In FY 2022, forty-three states had BBCE policies at any point during the fiscal year. These totals include the District of Columbia, but exclude Guam and the Virgin Islands.

States have some flexibility in setting the eligibility criteria for the TANF or MOE-funded noncash benefit. Some States with BBCE policies retained the Federal SNAP gross income limit for households without an elderly member or a member with a disability, whereas others raised the gross income limit for those households to between 160 and 200 percent of the poverty guidelines. Most States with BBCE policies have eliminated the net income test—though participants must still qualify for a positive benefit—and have eliminated or relaxed the resource test. Instead of, or in addition to, BBCE policies, some States have smaller TANF or MOE-funded programs, such as job training or after-school programs, which have specific eligibility requirements and confer categorical eligibility on only the small number of households they serve.

We used simulated TANF and SSI receipt, along with reported GA receipt, to identify pure PA households in the CPS ASEC. Those that qualified for a positive SNAP benefit were included in the denominator of the participation rates presented in this report. We did not include other categorically eligible households that were not eligible under Federal SNAP income and resource rules.

5. Determining income eligibility

To be included in the participation rates presented in this report, most SNAP households must have had income at or below Federal income limits. Pure PA households are not subject to the SNAP income limits. A SNAP household that does not contain an elderly member or a member with a disability must have gross monthly income at or below 130 percent of the Federal poverty guidelines. A household with an elderly member or a member with a disability is not subject to the gross income standard. All households that are not pure PA must have net monthly income at or below 100 percent of the Federal poverty guidelines. The FY 2022 maximum allowable gross and net monthly income standards are available in Table D.7, and corresponding values for previous years are available in Appendix G.

Simply dividing annual income by 12 would underestimate the number of eligible individuals in any given month. Therefore, to estimate monthly income, we distributed the annual income amounts reported in the CPS ASEC to simulated months based on the number of weeks worked as reported in the CPS ASEC, income receipt shown by SIPP data, and U.S. Bureau of Labor Statistics data on employment and unemployment spells. We then summed the estimated monthly income for each person in the household to determine the SNAP household's gross income for each month. For the FY 2020 estimates in this report, we allocated income over

the full fiscal year before restricting the data to the pre-pandemic period. Because our current methodology underestimates employment in the first months of the calendar year, the model overestimated SNAP eligibility in January and February 2020.

The CPS ASEC does not include information on the expenses deducted from gross income to compute net income, so we modeled net income as a function of the household's demographic and economic characteristics for each year. The net income model for the estimates in this report was based on patterns observed in our SIPP-based microsimulation model. The estimated relationships (the regression coefficients) are available in Table D.6.

6. Determining resource eligibility

To be included in the participation rates presented in this report, SNAP households that were not pure PA must have had countable resources at or below the applicable SNAP resource limit. In pre-pandemic FY 2020, the resource limit was \$3,500 for households with an elderly member or a member with a disability and \$2,250 for households that did not have an elderly member or member with a disability. These resource limits increased to \$3,750 and \$2,500, respectively, in FY 2022.

Under Federal vehicle rules, vehicles with equity of less than \$1,500 or vehicles used as a home or to produce income, transport a household member with a disability, or carry fuel or water are excluded from the resource test. In addition, one vehicle per adult household member, and any vehicle used by a minor household member to drive to work, school, or training, are each counted at the fair market value in excess of \$4,650. Remaining vehicles are valued at the vehicle's fair market value in excess of \$4,650 or equity, whichever is higher.

States can align their SNAP vehicle rules with those from a TANF or MOE-funded assistance program as long as the rules are less restrictive than Federal SNAP vehicle rules. In FY 2022, almost all States had aligned their vehicle rules with those of other programs, and more than half had adopted rules that exclude all vehicles from the resource test.

Because resource balances are not reported in the CPS ASEC, we used equations estimated from our 2011 SIPP-based microsimulation model to impute the probability that income-eligible households subject to the resource test were resource eligible and thus fully eligible. In both pre-pandemic FY 2020 and FY 2022, we simulated 28 States and the District of Columbia as excluding the value of all vehicles when determining resources, and all States except Delaware, North Dakota, and Washington as excluding some or all of the value of at least one vehicle per household. We modeled nine different vehicle rules to fully capture State-level differences. Because we did not include in the participation rate categorically eligible households not otherwise eligible under SNAP Federal income and resource rules or through receipt of pure PA, the vehicle rules we modeled reflected those used for non-BBCE households in each State.

7. Determining SNAP benefit amount

Monthly SNAP benefits for eligible households are calculated by subtracting 30 percent of a household's net income from the maximum benefit amount for its household size. If a household has zero net income, it receives the maximum SNAP benefit. Eligible one- and two-person households are guaranteed at least a minimum benefit. SNAP maximum benefits are based on

100 percent of the cost of the Thrifty Food Plan for a family of four in June of the previous fiscal year, adjusted for household size and geographic areas outside of the contiguous United States. The FY 2022 maximum and minimum SNAP benefit amounts are available in Table D.8, and corresponding values for previous years are available in Appendix G.

B. Determining the number of SNAP participants

For the participation rate numerator, we typically use the average monthly number of participants eligible under Federal income and resource rules across the 12 months in the fiscal year. Because the CPS ASEC underreports SNAP participation, we estimated the numerator from SNAP QC data files. These files are edited versions of the raw data file generated by the SNAP Quality Control System and contain data on the demographic and economic characteristics of a sample of participating households. We based estimates of SNAP participants in FY 2022 SNAP QC data file and derived estimates for FY 2020 from the pre-pandemic FY 2020 SNAP QC data file. Table D.9 shows sample sizes.

We weighted the SNAP QC data files to match adjusted Program Operations counts of individuals and households that were issued SNAP benefits and the total dollar value of these benefits in each month. We adjusted them to exclude temporary disaster benefits issued in response to Major Disaster Declarations with Individual Assistance and benefits issued to individuals found to be ineligible because those groups are not represented in the edited SNAP QC data file. We used data from USDA to determine the numbers of households and individuals who received temporary disaster benefits, the amounts of temporary disaster benefits issued to those households, and the amounts of supplemental disaster benefits issued to existing SNAP participants. We reduced the Program Operations counts by the disaster-related counts in the months and States in which the disaster relief occurred.

To adjust the Program Operations counts for benefits issued in error, we first used the raw unweighted SNAP QC data file to calculate disqualification rates for households, individuals, and benefits, and then reduced the Program Operations counts by those percentages, by State and month. The household disqualification rate is the percentage of all participating households that are either ineligible or eligible but do not qualify for a positive benefit. The individual disqualification rate is the percentage of all participants in households not eligible for a positive benefit.¹³ The benefit disqualification rate is slightly more complex—it considers over- and under-issuances to eligible households as well as benefits issued to disqualified households.

We removed households in Guam and the Virgin Islands from the participation rate numerator because they are not included in the CPS ASEC. We describe the procedure for estimating the number and characteristics of SNAP participants eligible under Federal income and resource rules below.

1. Predicting the resource ineligibility under Federal rules of some households eligible for SNAP through State BBCE policies

We were able to identify and remove from the participation rate numerator categorically eligible households that had income higher than the Federal income limits. However, QC

¹³ The individual disqualification rate in FY 2022 was 5 percent (about 2 million ineligible individuals).

reviewers do not collect data on resources from households not subject to the resource test, so we could not directly identify and remove from the numerator categorically eligible households with resources higher than the Federal resource limit. Instead, we used a regression equation to predict the probability that households that met the Federal income guidelines and were not pure PA would fail the SNAP Federal resource test, and removed them from the numerator. We estimated the equation using our 2011 SIPP-based microsimulation model and households simulated to participate in SNAP.

In FY 2022, we removed 3.8 million individuals in households with incomes that exceeded the Federal SNAP income limits and an additional 1.9 million in income-eligible households that we estimated would fail the Federal SNAP resource test from the participation rate numerator. In total, we estimated that 5.6 million participants, or 14 percent of total participants, were eligible through BBCE policies and would not otherwise have been eligible for SNAP in FY 2022. We did not include these individuals in the participation rates.

2. Identifying pure PA participating SNAP households

The SNAP QC data file provides individual-level data on receipt of an SSI, TANF, or GA benefit. Whereas an SSI or GA benefit is generally for the person who receives it, TANF benefits may cover additional family members. Because the SNAP QC data do not identify which additional household members are covered by a TANF benefit received by a household member, we used an algorithm to determine program coverage as follows:

- TANF received by the household head or the head's spouse covers the household head, spouse, and children (as identified by the relationship codes and ages).
- TANF received by a child of the household head covers that child and other relatives.
- In child-only households, TANF received by anyone in the household covers all of the children.

We identified a household as pure PA if all members were covered by TANF, SSI, or GA or if it had TANF income and all adults were covered by TANF, SSI, or GA. Although pure PA households are categorically eligible for SNAP and thus exempt from the income and resource tests, they still had to qualify for a positive SNAP benefit to be counted as participating. We included participating pure PA households in the rate numerator.

3. Identifying SNAP household composition

Certain disqualified household members cannot be identified in the CPS ASEC data. Possible reasons for a household member to be disqualified include:

- Not paying child support or cooperating with a child support agency
- Being an ineligible striker
- Violating program rules or failing to meet work requirements
- Being a fleeing felon, parole or probation violator, or convicted drug felon
- Having a disqualified Social Security number

- Some other unknown reason

To account for the presence of disqualified household members in the participation rate denominator, we adjusted the composition of participating households in the numerator. For example, we categorized a dwelling unit with two children in the SNAP household and an adult outside of the SNAP household who was disqualified for not meeting work requirements as a single adult with children rather than a child-only SNAP household. We did not include disqualified members considered for household composition purposes in counts of participants.

For this adjustment, we considered only disqualified SNAP household members whom we could not identify in the CPS ASEC and remove from the denominator. Disqualified SNAP household members whom we were able to identify in the CPS ASEC data remained excluded from consideration when defining household composition for the numerator. For example, a SNAP household with an eligible citizen child inside and an ineligible noncitizen adult outside of it was still considered a child-only SNAP household.

C. Calculating SNAP participation rates

We calculated participation rates by dividing the estimated number of participants by the estimated number of eligible individuals. SNAP participation rates for FY 2022, along with the numbers of participants and eligible individuals used to calculate them, are available in Appendix A. This information for pre-pandemic FY 2020 is presented in Appendix B.

D. Differences between the CPS ASEC and SNAP QC data

Using different data sources to estimate participation rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic that are lower than the corresponding estimates of participants. When this happens, estimated participation rates exceed 100 percent. This situation is particularly likely to occur when there are substantial differences between the two data sources.

Differences between the SNAP QC data and the CPS ASEC that might cause rates exceeding 100 percent include (1) who is represented in the data, (2) data on household composition, (3) when and how income is reported, and (4) reported program participation. We describe these differences here.

Differences in who is represented in the data. The universe for the participant estimates based on the SNAP QC data is slightly different than that for the eligibility estimates based on the CPS ASEC. For example, homeless individuals, those in group quarters, and some members of the armed forces and their families are included in the SNAP QC data but are not captured in the CPS ASEC. In addition, the CPS ASEC includes individuals who are categorically ineligible for SNAP (such as intentional program violators) but does not contain sufficient information to identify and remove them from the rate denominator. The SNAP QC data, appropriately, do not include categorically ineligible individuals.¹⁴ Finally, certain subgroups in the SNAP QC file or

¹⁴ In Section B.3 of this appendix, we describe a method we used to lessen the impact of this difference.

the CPS ASEC could be either over- or underrepresented because of sampling or weighting methods.

Differences in data on household composition. The SNAP QC file includes information on who applies together for SNAP (the SNAP household), but the file does not contain information on individuals who live in the same dwelling unit that are not part of the SNAP household. Conversely, the CPS ASEC includes information on all individuals in the dwelling unit but not on how these individuals would form SNAP households. To handle the CPS ASEC limitations, we simulated SNAP household formation in those data (described in Section A.1). The SNAP QC limitations, however, meant we could not use data on actual SNAP household formation to develop the simulation. Furthermore, differences between the simulated CPS ASEC and actual SNAP QC SNAP household compositions could have affected subgroup participation rates. For instance, the estimated FY 2022 participation rate for SNAP households consisting of one adult and one or more children was higher than 100 percent, implying an underestimation of how often this type of eligible SNAP household was formed.

In addition, the time period represented by the SNAP household composition could differ between the two data sets. For example, the SNAP QC data might not capture household composition changes that occur between the certification and sampling dates. Similarly, although the CPS ASEC provides information on household composition at the time of the interview, changes could occur after the calendar year (the CPS ASEC income reporting period) but before the interview date in February, March, or April of the next calendar year.

Differences in reported income. There are several differences in how income is reported in the SNAP QC file versus the CPS ASEC. Two that directly affect the estimation of participation rates are the income reporting period and how income is counted. The SNAP QC file uses a monthly income reporting period, whereas the CPS records annual income. The monthly income estimation process we applied to the CPS ASEC data, described in Section A.5, aims to minimize the resulting inconsistencies, but the results likely differ from actual monthly income.

In addition, the SNAP QC file and the CPS ASEC use different methods of counting income. For the SNAP QC sample, countable income is measured according to SNAP certification rules and procedures (for example, pertaining to anticipating income, prospective budgeting, and change reporting). It is reasonable to expect these amounts to differ from those in the CPS ASEC, which are based on households' reports of income they received in the previous year.

Differences in reported program participation. The SNAP QC file includes high quality information on income received by SNAP households from other government programs, such as SSI and TANF. In the CPS ASEC, however, participation in those programs is underreported, so we simulated SSI and TANF eligibility, participation, and benefits as described in Section A. The SSI administrative data we used for calibration are available only on an annual basis and for a single month (December). Furthermore, the TANF data we used for calibration are typically for the previous fiscal year. For these and other reasons, estimates of eligible individuals receiving SSI or TANF benefits are not entirely consistent with corresponding estimates of participants.

Table D.1. Unweighted sample sizes for the CPS ASEC, 1977 to 2023

CPS ASEC year	All households	Analysis year(s)
1977	68,294	1976
1979	68,455	1978
1981	81,451	1980
1983	73,195	1982
1985	74,568	1984
1987	73,843	1986
1989	70,454	1988
1991	75,076	1990
1992	74,236	1991
1993	73,878	1992
1994	73,126	1993
1995	72,152	1994
1996	63,339	1995
1997	64,046	1996
1998	64,659	1997
1999	65,377	1998
2000	51,016	1999
2001	78,054	2000
2002	78,265	2001, 2002
2003	78,310	2002, 2003
2004	77,149	2003, 2004
2005	76,447	2004, 2005
2006	75,939	2005, 2006
2007	75,477	2006, 2007
2008	75,872	2007, 2008
2009	76,185	2008, 2009
2010	76,260	2009, 2010
2011	75,188	2010, 2011
2012	74,383	2011, 2012
2013	74,821	2012, 2013
2014	74,170	2013, 2014
2015	74,257	2014, 2015
2016	69,484	2015, 2016
2017	69,957	2016, 2017
2018	67,909	2017, 2018
2019	68,345	2018, 2019
2020	60,460	2019
2021	62,850	2019, 2020
2022	59,148	2022
2023	56,839	2022

Table D.2. Median monthly unweighted counts of households by the probability of being eligible, FY 2022

	Unweighted counts
All households ^a	55,846
Households with a probability of being eligible greater than zero	
Total	10,228
Probability of being eligible	
Greater than 0.0 to 0.25	720
Greater than 0.25 to 0.50	321
Greater than 0.50 to 0.75	1,792
Greater than 0.75 to less than 1.00	5,575
1.00	1,820

Notes: Estimates in this table reflect median monthly numbers of CPS households. We calculate a household's probability of being eligible for SNAP benefits by determining whether it passes the appropriate income tests and then estimating the probability of it passing the resource test. In dwelling units with multiple SNAP households, the probabilities of each household are combined into one dwelling unit probability. We multiply the final probability of being eligible by the weight to determine the household's contribution to the total (weighted) number of eligible households.

^a This count of unweighted households is lower than that presented in Table D.1 because it includes only dwelling units that have potentially eligible individuals. Excluded from the table are dwelling units that contain only undocumented noncitizens, full-time students, and those living in group quarters or in dwelling units headed by a member of the armed forces.

Table D.3. Changes in the CPS ASEC over time

CPS ASEC year	Data year	Changes in design or weighting from previous year
1979	1978	Changes in metro/nonmetro definitions; new, more detailed income questions introduced for two rotation groups
1980	1979	Definition of adult changed from age 14 to 15; new concept of families and headship status; new income questions introduced for all rotation groups
1981	1980	New weighting procedure based on 1980 Census introduced that increased the overall population by 2.3 percent and had a disproportionate impact on Hispanics
1982	1981	Top-coding of single-employer earnings variables increased from \$50,000 to \$75,000
1983	1982	New industry and occupation coding; new definition of group quarters; poverty index modified slightly (deleting the farm/nonfarm dimension)
1984	1983	A second (unofficial) version of the file introduced the revised weighting procedure developed for the March 1985 CPS
1985	1984	Revised weighting procedures (specifically, the control on Hispanics changed, causing a slight increase in poverty with disproportionate impacts on the Hispanic population, male unrelated individuals, and individuals in related subfamilies); changes in the designation of metro/nonmetro, farm/nonfarm, central city/noncentral city status, top-coding of single-employer earnings variables increased from \$75,000 to \$99,999
1986	1985	More metro/nonmetro changes
1987–1988	1986–1987	None
1989	1988	Revised processing procedures increased income overall and reduced poverty; poverty rate changed more severely for Blacks and selected age ranges
1990–1992	1989–1991	None
1993	1992	New population controls based on 1990 census and adjustments for the census undercount increased the poverty population; largest increases in poverty rates for Hispanic families, families with single female householders, White children, and individuals in unrelated subfamilies
1994	1993	Survey redesigned to improve the measurement of labor force concepts and wording of questions and to implement a computerized questionnaire
1995	1994	None
1996	1995	Sample reduction; revised earnings top-coding (instead of top-coding single-employer earnings variables at 99,999, top-coded records were assigned the mean earnings for top-coded individuals with similar characteristics); revised race edit and allocation (caution urged when comparing 1995 and 1996 data on race groups)
1997–1999	1996–1998	None
2000	1999	Rewighted based on Census 2000
2001	2000	Rewighted based on Census 2000, expanded sample size
2002	2001	Weights based on Census 2000
2003	2002	Expanded racial categories
2004–2009	2003–2008	None
2010	2009	Replicate weights added to the file, retroactive to 2005
2011–2013	2010–2012	None
2014	2013	About three-eighths of the sample received redesigned income questions; objectives of redesigning income questions were to improve income reporting, include income from resources, improve resource reporting, increase response rates, and reduce errors resulting from respondent fatigue
2015	2014	Full sample received the redesigned income questions introduced in 2014

Table D.3. (continued)

CPS ASEC year	Data year	Changes in design or weighting from previous year
2016–2018	2015–2017	None
2019	2018	Changes to family structure to identify spouses and unmarried partners as opposite- or same-sex; revised processing procedures implemented that affect income, poverty, and health insurance measures
2020	2019	Alternate public use entropy balance weights developed to account for survey nonresponse bias as a result of the COVID-19 pandemic.
2022	2021	Weights based on 2020 Census, retroactive to 2020 CPS ASEC.
2023	2022	None

Note: Each CPS ASEC year corresponds to the preceding data year.

Table D.4. Percentage of noncitizens imputed to be refugees, by analysis year and year of arrival

Year of arrival	Percentage imputed to be refugees, by analysis year	
	FY 2020	FY 2022
2022	n.a.	6
2021	n.a.	7
2020	7	7
2019	7	7
2018	7	7
2017	9	n.a.
2016	9	n.a.

Note: The CPS ASEC identifies a two- to three-year range for year of arrival in the United States. Refugee status is not imputed for noncitizens meeting the five-year residency requirement.

n.a. = not applicable.

Table D.5. Percentage of adults ages 18–49 without disabilities in childless households imputed to be potentially eligible, by SNAP participation in past year

	Pre-pandemic FY 2020		FY 2022	
	Participated in SNAP in past year		Participated in SNAP in past year	
	Yes	No	Yes	No
Alabama	61.8	71.9	61.8	71.9
Alaska	69.8	77.8	61.7	71.9
Arkansas	100.0	100.0	61.7	71.9
Delaware	100.0	100.0	61.7	71.9
Florida	61.8	72.0	61.9	72.0
Idaho	66.2	75.2	62.4	72.4
Indiana	61.8	71.9	61.7	71.9
Iowa	61.7	71.9	61.7	71.9
Kansas	61.8	72.0	61.9	72.0
Massachusetts	100.0	100.0	61.7	71.9
Mississippi	62.0	72.1	61.8	71.9
Missouri	61.8	71.9	61.8	71.9
Montana	79.9	85.3	68.7	77.0
Nebraska	61.8	72.0	61.8	71.9
North Carolina	61.7	71.9	61.8	71.9
Oklahoma	61.8	71.9	61.7	71.9
South Carolina	61.8	71.9	61.8	71.9
Tennessee	62.7	72.7	61.9	72.0
Utah	62.1	72.2	61.7	71.9
Virginia	100.0	100.0	61.7	71.9
West Virginia	83.3	87.8	61.7	71.9
Wyoming	61.7	71.9	61.7	71.9

Notes: This table shows the percentage of people subject to a time limit that we impute to be potentially eligible for SNAP because they had received no more than three months of benefits while not working, lived in a waiver area, participated in an employment and training program, or received a State exemption.

States not listed here are those in which 100 percent of adults ages 18–49 without disabilities in childless households were imputed to be eligible. These States either obtained permission to suspend time limits Statewide or pledged to make employment and training opportunities available to every participant facing time limits.

Table D.6. SNAP net income regression coefficients

Explanatory variable	Coefficients estimated using administrative data for:	
	Pre-pandemic FY2020	FY 2022
Constant	-590.5508† (52.45186)	-590.5544† (53.58741)

APPENDIX E

SAMPLING ERROR OF PARTICIPATION RATE ESTIMATES

SAMPLING ERROR OF PARTICIPATION RATE ESTIMATES

The participation rates in this report represent the ratio of SNAP participants to SNAP-eligible individuals. Participant counts are based on SNAP Program Operations data and SNAP QC data. Eligible counts are based on CPS ASEC data. Both counts are derived from samples and are subject to statistical sampling error, as are the resulting participation rate estimates.

Standard errors of participation rates

One indicator of the magnitude of the sampling error associated with a given estimate is its standard error. Standard errors measure the variation in estimated values that would be observed if multiple replications of the sample were drawn. The magnitude of the standard errors depends on three factors: (1) the degree of variation in the variable within the population from which the sample is drawn; (2) the design of the sample, including such issues as stratification and sampling probabilities; and (3) the size of the sample on which the estimate is based.

Generally, the standard error of a nonlinear variable, such as a participation rate, cannot be estimated directly. Rather, one must estimate the standard error of a linear approximation of the nonlinear variable. To estimate the standard error of participation rates contained in this report, we use a Taylor series expansion to produce a linear approximation of the participation rate. The variance of the participation rate, $\text{var}(r)$, can be expressed as a function of the number of participants (p), the number of eligible individuals (e), and their respective variances:

$$(1) \quad \text{var}(r) = \text{var}(p/e)^2 = (p/e)^2 [\text{var}(p)/p^2 + \text{var}(e)/e^2].$$

The standard error of the participation rate is simply the square root of the variance.

In the SNAP QC data file, we directly calculate the variance of the number of participants using replicate weights.¹⁵ In the CPS ASEC, we calculate the variance of the number of eligible individuals using replicate weights produced by the Census Bureau and its recommended replicate weight method.

Confidence intervals

Standard errors can be used to compute confidence intervals for the estimated participation rates. A confidence interval is a range of values with a known probability of containing the true value of an estimated participation rate. For instance, a 90 percent confidence interval extends 1.645 standard errors above and below the estimated rate and indicates there is a 90 percent chance that the confidence interval will contain the true value. Tables E.1 and E.2 show standard errors and confidence intervals for selected participation rates for FY 2022 and pre-pandemic FY 2020, respectively.

¹⁵ More details are available in Appendix E of Monkovic (2024).

Table E.1. Sampling error associated with selected participation rate estimates, FY 2022

Variable	Participation rate with 90 percent confidence interval			Eligible		Participating	
				Number	Standard error	Number	Standard error
Individuals	87.6	+/-	1.5	38,278,702	381,682	33,551,236	130,161
Households	91.6	+/-	1.6	19,362,488	199,761	17,736,470	52,884
Benefits	*			*		5,664,396,632	17,139,429
Children (age 17 or younger)	*			*		13,447,178	95,943
Non-elderly adults (ages 18–59)	94.5	+/-	2.3	14,994,238	201,529	14,175,654	89,189
Elderly individuals (age 60 or older)	55.3	+/-	1.7	10,712,902	147,272	5,928,404	78,959
Adults ages 18–49 without disabilities in childless households ^a	99.7	+/-	5.5	2,979,219	80,597	2,971,624	59,909
Noncitizens	50.3	+/-	4.6	2,445,108	78,656	1,230,971	55,458
Citizen children living with noncitizen adults	59.4	+/-	5.5	3,181,808	96,743	1,891,027	89,595

1 to 50 percent	*			*		7,924,084	154,825
101 to 130 percent	59.3	+/-	3.1	8,415,476	164,837	4,989,869	123,732

Sources: SNAP Program Operations, SNAP Quality Control, and Current Population Survey Annual Social and Economic Supplement data.

Note: Participant, eligible, and benefit totals represent monthly averages.

* The use of different data sources to estimate rate numerators and denominators can result in estimates of eligible individuals with a particular characteristic or of potential benefits to eligible individuals that are lower than the corresponding estimates of participants or benefits received by participants. When this happens, estimated rates exceed 100 percent. We do not report estimated rates higher than 100 percent or the associated estimates of eligible individuals, households, or potential benefits. See Appendix D for more information.

^a With some exceptions, these participants are subject to work requirements and time limits.

TANF = Temporary Assistance to Needy Families, SSI = Supplemental Security Income.

Table E.2. Sampling error associated with selected participation rate estimates, pre-pandemic FY 2020

Variable	Participation rate with 90 percent confidence interval			Eligible		Participating	
				Number	Standard error	Number	Standard error
Individuals	80.6	+/-	1.3	40,806,758	379,244	32,882,855	114,888

APPENDIX F

ECONOMIC AND POLICY INFLUENCES ON SNAP

Table F.1. Summary of major influences on SNAP participation rate estimates, 1976 to 2022

Period of change	Major influences	Effect on number of participants and eligible individuals	Participation rate change
1978 to 1980	Food Stamp Act of 1977	Substantial increase in participants; decrease in eligible individuals	Up 17 points
1980 to 1982	Recession	Almost no change in participants; substantial increase in eligible individuals	Down 3 points
1982 to 1984	Economic recovery	Slight decrease in both participants and eligible individuals	No change
1984 to 1986	1985 Food Security Act	Almost no change in participants; substantial increase in eligible individuals	Down 4 points
1986 to 1988	Growth in economy	Small decrease in participants and eligible individuals	No change
1988 to 1990	Medicaid expansion, Homeless Assistance Act, IRCA, worsening economy	Increase in participants; small decrease in eligible individuals	Up 6 points
1990 to 1992	Continued Medicaid expansion, recession	Increase in participants; smaller increase in eligible individuals	Up 5 points
1992 to 1993	Improving economy	Increase in participants; smaller increase in eligible individuals	Up 1 point
1993 to 1994	Improving economy	No change in participants; small drop in eligible individuals	Up 1 point
1994 to 1995	Improving economy	Decrease in participants; smaller decrease in eligible individuals	Down 2 points
1995 to 1996	Improving economy	Decrease in participants; no change in eligible individuals	Down 3 points
1996 to 1997	Welfare reform, improving economy	Large decrease in participants and eligible individuals; larger decrease in participants	Down 5 points
1997 to 1998	Welfare reform, improving economy	Large decrease in participants and eligible individuals; larger decrease in participants	Down 4 points
1998 to 1999	Welfare reform, improving economy	Decrease in participants and eligible individuals; larger decrease in participants	Down 2 points
1999 to 2000	Welfare reform, improving economy	Decrease in participants and eligible individuals; larger decrease in participants	Down less than 1 point
2000 to 2001	Expanded vehicle exclusions, worsening economy	Slight increase in participants; large increase in eligible individuals	Down 3 points
2001 to 2002(a)	Expanded vehicle exclusions, increased poverty	Large increase in participants and eligible individuals; larger increase in eligible individuals	Down less than 1 point
2002(b) to 2003	Increased outreach, increased eligibility for noncitizens, increased poverty, expanded vehicle exclusions	Increase in both participants and eligible individuals	Up 2 points
2003 to 2004	Increased outreach, increased poverty, increased eligibility for immigrant children, expanded vehicle exclusions	Increase in both participants and eligible individuals; larger increase in participants	Up more than 5 points

Table F.1. (continued)

Period of change	Major influences	Effect on number of participants and eligible individuals	Participation rate change
2004 to 2005	Increased outreach, expanded vehicle exclusions	Increase in both participants and eligible individuals; larger increase in participants	Up 3 points
2005 to 2006	Increased outreach, decreased poverty, expanded vehicle exclusions	Increase in participants; decrease in eligible individuals	Up 4 points
2006 to 2007	Increased outreach, increased poverty, expanded vehicle exclusions	Increase in participants; larger increase in eligible individuals	Down less than 1 point
2007 to 2008	Worsening economy, increased outreach, expanded vehicle exclusions	Increases in both participants and eligible individuals	Up 2 points
2008 to 2009	Recession, increased outreach, increase in minimum benefit allotments, midyear increase in maximum benefit allotments, midyear State option to eliminate time-limited benefits, expanded vehicle exclusions	Large increases in both participants and eligible individuals	Up more than 1 point
2010 to 2011	Slow economic recovery	Large increase in participants; very minor decrease in eligible individuals	Up more than 6 points
2011 to 2012	Improving economy	Increase in participants; decrease in eligible individuals	Up 5 points
2012 to 2013	Improving economy	Increase in participants; very minor decrease in eligible individuals	Up 2 points
2013 to 2014	Agricultural Act of 2014, decrease in maximum benefit allotments	Decrease in participants; minor increase in eligible individuals.	Down 2 points
2014 to 2015	Improving economy	Small decrease in participants and eligible individuals	No change
2015 to 2016(a)	Improving economy	Decrease in participants; larger decrease in eligible individuals	Up 2 points
2016(b) to 2017(b)	Strong economy	Decrease in participants; smaller decrease in eligible individuals	Down 1 point
2017(b) to 2018	Strong economy	Small decrease in participants and eligible individuals	No change
2018 to 2019	Strong economy	Small decrease in participants and eligible individuals	No change
2019 to pre-pandemic 2020(a)	Strong economy	Small decrease in participants and slight increase in eligible individuals	Down 4 points
Pre-pandemic 2020(b) and 2022	COVID-19 public health emergency; FFCRA of 2020; Consolidated Appropriations Act of 2021; American Rescue Plan Act of 2021; Thrifty Food Plan reevaluation	Increase in participants and larger decrease in eligible individuals	Up 7 points

Note: Readers should not compare estimates for FY 2016(b), FY 2017(b), FY 2018, FY 2019, and FY 2020 with estimates for any prior years because of a revised methodology for those years.

Table F.2. Major economic indicators, 1976 to 2022

Year	Real GDP increase ^a	Productivity increase ^b	Unemployment rate ^c	Inflation rate ^d	Poverty rate	Individuals in poverty (000)
1976	5.4	3.3	7.7	5.5	11.8	24,975

Sources: Real Gross Domestic Product (GDP) increase: U.S. Department of Commerce, Bureau of Economic Analysis, *National Income and Product Accounts*. Productivity increase: U.S. Department of Labor, Bureau of Labor Statistics, "Major Sector Productivity and Costs Index." Unemployment rate: U.S. Department of Labor, U.S. Bureau of Labor Statistics. Inflation rate: U.S. Department of Commerce, Bureau of Economic Analysis, *National Income and Product Accounts*. Individuals below poverty line: U.S. Census Bureau.

^a Percentage change from preceding year.

^b Percentage change from preceding year in output per hour, business sector.

^c All civilian workers.

^d Percentage change from preceding year in the implicit price deflator for GDP.

Figure F.1. Trends in SNAP individual participation rate estimates, poverty rates, and unemployment rates, 1976 to 2022

Sources: Participation rates from SNAP Program Operations data, SNAP QC data, and CPS ASEC data for the years shown. Poverty rates from U.S. Bureau of the Census, Poverty in the United States. Unemployment rates from U.S. Department of Labor, U.S. Bureau of Labor Statistics.

Note: The individual participation rate for FY 2020 represents the pre-pandemic period (October 2019 through February 2020).

* There are breaks in the time series due to revisions in the methodology or data in 1944, 1999, FY 2002, FY 2010, FY 2016 and pre-pandemic FY 2020.

Table F.3A. Historical legislation affecting SNAP

Full legislation name	Short title for use in this report	Public Law
Food Stamp Act of 1964, as amended	Food Stamp Act of 1964, as amended	PL 88-525
Food Stamp Act of 1977, effective 1/1/79	Food Stamp Act of 1977	PL 95-113
Food Stamp amendments of 1979 and 1980	Food Stamp amendments of 1979 and 1980	PL 96-58 and PL 96-249
Omnibus Budget Reconciliation Act of 1981 and Food Stamp amendments and Reauthorization Act of 1981, effective 10/1/81	OBRA of 1981 and Food Stamp amendments and Reauthorization Act of 1981	PL 86-35 and PL 97-98
Food Stamp amendments of 1982, effective 10/82, and Continuing Resolution of 1984	Food Stamp amendments of 1982 and Continuing Resolution of 1984	PL 97-253 and PL 84-473
1985 Food Security Act, effective 5/86	1985 Food Security Act	PL 99-198
1987 Homeless Assistance Act	1987 Homeless Assistance Act	PL 100-77
Hunger Prevention Act of 1988	HPA of 1988	PL 100-435
Farm, Agriculture, Conservation and Trade Act of 1990 and 1991	FACTA	PL 102-237
Amendments to Farm, Agriculture, Conservation and Trade Act of 1991	Amendments to FACTA of 1991	
The Mickey Leland Childhood Hunger Relief Act of 1993	MLCHRA	PL 103-66
The Personal Responsibility and Work Opportunity Reconciliation Act of 1996	PRWORA	PL 104-193
The Balanced Budget Act of 1997	BBA	PL 105-33
Agricultural Research, Extension, and Education Reform Act of 1998	AREERA	PL 105-185
Agriculture Appropriations Act of 2001	Agriculture Appropriations Act of 2001	PL 106-387
Farm Security and Rural Investment Act of 2002	2002 Farm Bill	PL 107-171
Food, Conservation, and Energy Act of 2008	2008 Farm Bill	PL 110-246
American Recovery and Reinvestment Act of 2009	ARRA	PL 111-5
Agricultural Act of 2014	2014 Farm Bill	PL 113-79
Agricultural Act of 2018	2018 Farm Bill	PL 115-334
Families First Coronavirus Response Act of 2020	FFCRA	PL 116-127
Consolidated Appropriations Act	CAA	PL 116-260
American Rescue Plan Act of 2021	ARPA	PL 117-2

Table F.3B. Selected features of SNAP under past legislation—income limits

Legislation	Income limits
Food Stamp Act of 1964, as amended	Net income had to be less than or equal to the maximum SNAP net income, which was tied to the maximum coupon allotment
Food Stamp Act of 1977	Net income had to be less than or equal to the poverty line
Food Stamp amendments of 1979 and 1980	Excluded energy assistance as income; included income of ineligible aliens less prorated share
OBRA of 1981 and Food Stamp amendments and Reauthorization Act of 1981	Gross income had to be less than or equal to 130 percent of the poverty line, except for individuals who are elderly and disabled, who kept previous net income limit
Food Stamp amendments of 1982 and Continuing Resolution of 1984	Individuals who are not elderly or disabled were subjected to both net and gross income limits
1985 Food Security Act	Minor changes in treatment of income
1987 Homeless Assistance Act	Moved annual adjustment in income eligibility guidelines from July 1 to October 1 of each year
HPA of 1988	No change
FACTA	Certain types of educational assistance not counted as income
Amendments to FACTA of 1991	No change
MLCHRA	Earnings of students excluded from income through age 21; excluded as income 100 percent of vendor payments made to transitional housing facilities on behalf of homeless households and GA vendor payments for assistance with utility costs
PRWORA	Earnings of students excluded from income through age 17
BBA	No change
AREERA	No change
Agriculture Appropriations Act of 2001	No change
2002 Farm Bill	State options to exclude certain types of income not counted under the State's TANF cash assistance or Medicaid programs and to treat legally obligated child support payments to a non-household member as an income exclusion rather than a deduction
2008 Farm Bill	Combat-related military pay excluded from income
ARRA	No change
2014 Farm Bill	No change
2018 Farm Bill	No change
FFCRA	No change
CAA	Pandemic unemployment compensation payments excluded from consideration as income
ARPA	No change

Table F.3C. Selected features of SNAP under past legislation—resource limits

Legislation	Resource limits
Food Stamp Act of 1964, as amended	\$1,500; \$3,000 for elderly household of at least two individuals; excluded vehicles used for employment or handicapped transportation
Food Stamp Act of 1977	\$1,750; \$3,000 for elderly household of at least two individuals; excluded first \$4,500 of the fair market value (FMV) for vehicles
Food Stamp amendments of 1979 and 1980	\$1,500; \$3,000 for elderly household of at least two individuals; excluded vehicles used for handicapped
OBRA of 1981 and Food Stamp amendments and Reauthorization Act of 1981	No change
Food Stamp amendments of 1982 and Continuing Resolution of 1984	State option to waive resource test for pure Aid to Families with Dependent Children (AFDC) households passing gross income test. IRA KEOGH accounts counted as resources
1985 Food Security Act	\$2,000; \$3,000 for households with elderly member(s) (including one-person households); changed definition of countable resources
1987 Homeless Assistance Act	No change
HPA of 1988	No change
FACTA	Nonliquid resources and those exempted by AFDC and SSI not counted
Amendments to FACTA of 1991	Same limits; resource holding of AFDC and SSI recipients not counted
MLCHRA	Raised the vehicle FMV resource limit to \$4,550 on 9/1/94, to \$4,600 on 10/1/95, and to \$5,000 on 10/1/96, with annual cost-of-living adjustments thereafter; excluded vehicles necessary to carry food or water
PRWORA	Vehicle FMV resource limit raised to \$4,650, with no planned future cost-of-living adjustments
BBA	No change
AREERA	No change
Agriculture Appropriations Act of 2001	Allowed States to use the vehicle limit they used in a TANF assistance program if it would result in a lower attribution of resources for the household
2002 Farm Bill	Increased the resource limit for household with a disabled member from \$2,000 to \$3,000
2008 Farm Bill	Indexed resource limits to inflation; excluded all tax-preferred education accounts and retirement accounts from countable resources
ARRA	No change
2014 Farm Bill	No change
2018 Farm Bill	No change
FFCRA	No change
CAA	Pandemic unemployment compensation payments excluded from consideration as resources in the month of receipt and the following 9 months
ARPA	No change

Table F.3D. Selected features of SNAP under past legislation—benefits

Legislation	Maximum benefit	Minimum benefit	Benefit reduction rate
Food Stamp Act of 1964, as amended	Thrifty Food Plan (TFP); indexed since 1971; indexed semiannually from 1973 to 1979 based on the Bureau of Labor Statistics food price index	Minimum benefit varied by household size	Basis of issuance tables (average 30 percent above lowest levels)
Food Stamp Act of 1977	Indexed semiannually based on TFP components	\$10 for one- and two-person households only	30 percent
Food Stamp amendments of 1979 and 1980	Indexed annually in January based on September cost-of-plan components	No change	No change
OBRA of 1981 and Food Stamp amendments and Reauthorization Act of 1981	Indexing frozen until 7/1/83; next adjustment 10/1/84 based on June cost-of-plan components	No change	No change
Food Stamp amendments of 1982 and Continuing Resolution of 1984	Indexed to 99 percent of TFP cost; changed back to 100 percent by PL 98-473; last step in benefit calculation rounded down	No change	No change
1985 Food Security Act	No change	No change	No change
1987 Homeless Assistance Act	No change	No change	No change
HPA of 1988	Incremental indexing to 103 percent of TFP by FY 1991 and thereafter	No change	No change
FACTA	No change	Required annual adjustments to the \$10 minimum benefit	No change
Amendments to FACTA of 1991	No change*	No change	No change
MLCHRA	No change	No change	No change
PRWORA	Reduced to 100 percent of TFP for contiguous U.S. and District of Columbia; Alaska and Hawaii remained at 1996 levels	Removed requirement for indexing of minimum benefit	No change
BBA	No change	No change	No change
AREERA	No change	No change	No change
Agriculture Appropriations Act of 2001	No change	No change	No change
2002 Farm Bill	No change	No change	No change
2008 Farm Bill	No change	Increased for one- and two-person households from \$10 to 8 percent of maximum benefit of one-person households	No change
ARRA	Increased to 113.6 percent of June 2008 value of TFP, effective April 2009 until October 31, 2013	Adjusted for one- and two-person households, April 2009 until October 31, 2013	No change
2014 Farm Bill	No change	No change	No change

Legislation	Maximum benefit	Minimum benefit	Benefit reduction rate
2018 Farm Bill	Directed USDA to reevaluate the Thrifty Food Plan on a consistent schedule; the TFP was reevaluated in 2021 and increased SNAP benefits for almost all SNAP households beginning in October 2021	Increased after TFP re-evaluation beginning in October 2021	No change
FFCRA	Temporarily authorized emergency allotments to SNAP households receiving less than the maximum benefit that increased the household's benefit to the maximum for its size; emergency allotments ended for all States and territories by February 2023	Not applicable (all households received at least the maximum benefit)	No change
CAA	Temporarily increased maximum benefits to 115 percent of the June 2020 value of the TFP from January 2021 through June 2021; provided additional guidance for SSI-CAP benefit increases	No change	No change
ARPA	Extended the temporary increases in the maximum benefits stipulated in the CAA through September 2021	No change	No change

Table F.3E. Selected features of SNAP under past legislation—deductions

Legislation	Deductions
Food Stamp Act of 1964, as amended	Payroll; 10 percent of earnings up to \$30; child care; education; medical over \$10; alimony or child support; casualty losses; shelter in excess of 30 percent of net income
Food Stamp Act of 1977	Standard \$60; indexed semiannually to CPI nonfood components; 20 percent of earnings; child care up to \$75; shelter in excess of 50 percent of net, not to exceed \$80 in combination with child care; limit indexed annually in July based on shelter-fuel-utilities component of the CPI
Food Stamp amendments of 1979 and 1980	1980 act: standard deduction and shelter/child care cap indexed annually in January based on September to September change; 1979 act: people who are elderly or disabled are not subjected to the excess shelter expense deduction maximum and allowed medical expenses over \$35a
OBRA of 1981 and Food Stamp amendments and Reauthorization Act of 1981	18 percent of earnings; shelter/child care cap set at \$115 with next inflation adjustment on 7/1/83, then on 10/1/84, and each October thereafter
Food Stamp amendments of 1982 and Continuing Resolution of 1984	Standard deduction raised to \$89; next inflation adjustment delayed until 10/1/83; limited use of standard utility expense allowances
1985 Food Security Act	20 percent of earnings; cap of \$147 on excess shelter expense deduction with indexed increases; cap of \$160 on dependent care not indexed
1987 Homeless Assistance Act	Increased cap on excess shelter expense deduction for all households certified after 10/1/87
HPA of 1988	Dependent care deduction increased to \$160 per month per dependent, rather than per household
FACTA	No change
Amendments to FACTA of 1991	No change
MLCHRA	Increased cap on excess shelter expense deductions for all households to \$231 after 7/1/94 and to \$247 after 10/1/95; raised the dependent care deduction cap to \$200 a month for each child younger than age 2 and \$175 a month for all other dependents
PRWORA	Standard deduction frozen at current levels; raised excess shelter expense deduction to \$250 on 1/1/97, to \$275 on 10/1/98, to \$300 on 10/1/00
BBA	No change
AREERA	No change
Agriculture Appropriations Act of 2001	Increased the excess shelter cap to \$340 in FY 2001 and then indexed the cap to changes in the CPI for all consumers each year, beginning in fiscal year 2002
2002 Farm Bill	Changed standard deduction to vary according to household size and be adjusted annually for cost-of-living increases; allowed States to simplify the standard utility allowance if they elected to use it rather than actual utility costs for all households; also allowed States to use a standard deduction of \$143 per month for homeless households with some excess shelter expense deductions
2008 Farm Bill	Raised the minimum standard deduction for households with one to three members from \$134 to \$144 for FY 2009 and indexed it to inflation starting in FY 2010; eliminated the dependent care deduction cap
ARRA	No change
2014 Farm Bill	Tightened standards for households qualifying for standard utility allowances based on receipt of energy assistance
2018 Farm Bill	Changed homeless households shelter deduction from State option to mandatory. The new rule indexed the current value of \$143 to inflation beginning in Fiscal Year (FY) 2019
FFCRA	No change
CAA	No change
ARPA	No change

^a A provision to reduce the medical deduction from \$35 to \$25 was repealed in the Omnibus Budget Reconciliation Act (OBRA) and never implemented.

Table F.3F. Selected features of SNAP under past legislation—accounting period, categorical eligibility

Legislation	Accounting period	Categorical eligibility
Food Stamp Act of 1964, as amended	Prospective month	Public assistance households automatically eligible
Food Stamp Act of 1977	Prospective month	Public assistance households not automatically eligible
Food Stamp amendments of 1979 and 1980	State option to use either prospective or retrospective with monthly report	No change
OBRA of 1981 and Food Stamp amendments and Reauthorization Act of 1981	Retrospective becomes mandatory 10/1/83 for some households, prospective for others	No change
Food Stamp amendments of 1982 and Continuing Resolution of 1984	Migrant workers and elderly and disabled households with no earnings exempted from monthly reporting	No change
1985 Food Security Act	Retrospective budgeting and monthly reporting required for households with earnings or work history except migrant farmers and people who are elderly or disabled	Categorical eligibility for pure AFDC or SSI households
1987 Homeless Assistance Act	Exempted seasonal farm workers and households in which all members were homeless from monthly reporting requirements	No change
HPA of 1988	No change	No change
FACTA	No change	Expanded categorical eligibility to recipients of certain State and local general assistance payments
Amendments to FACTA of 1991	No change	No change
MLCHRA	No change	No change
PRWORA	No change	Categorical eligibility for pure TANF (instead of pure AFDC) households
BBA	No change	No change
AREERA	No change	No change
Agriculture Appropriations Act of 2001	No change	No change
2002 Farm Bill	No change	No change
2008 Farm Bill	No change	No change
ARRA	No change	No change
2014 Farm Bill	No change	No change
2018 Farm Bill	No change	No change
FFCRA	No change	No change
CAA	No change	No change
ARPA	No change	No change

Table F.3G. Selected features of SNAP under past legislation—work registration requirements and time limits

Legislation	Work registration requirements and time limits
Food Stamp Act of 1964, as amended	Required work registration and employment as a condition of eligibility for adults ages 18–65 without disabilities, except for individuals responsible for care of a dependent child or incapacitated adult; students; or individuals employed 30 hours a week
Food Stamp Act of 1977	Lowered age for individuals required to work from 65 to 60; added job search as a work requirement; lowered age for caretaker exemption from 18 to 12 years
Food Stamp amendments of 1979 and 1980	No change
OBRA of 1981 and Food Stamp amend-ments and Reauthorization Act of 1981	Applied disqualification for voluntarily quitting a job to participants as well as applicants; lowered age for caretaker exemption to age 6
Food Stamp amendments of 1982 and Continuing Resolution of 1984	No change
1985 Food Security Act	Disqualified only the violating member rather than the entire household unless that member was also head of household; required all States to implement an employment and training (E&T) program by April 1, 1987
1987 Homeless Assistance Act	No change
HPA of 1988	No change
FACTA	No change
Amendments to FACTA of 1991	No change
MLCHRA	No change
PRWORA	Adults ages 18–49 without disabilities in childless households required to work at least 20 hours per week in a job or qualified training program; individuals subject to, but not complying with, the requirement are limited to 3 months of benefits in any 36-month period; minimum disqualification periods for individuals who fail to comply with work requirements range from 1 month to permanently, depending on the number of violations
BBA	Increased funds for SNAP E&T programs but required State agencies to earmark 80 percent of the funds for adults ages 18–49 without disabilities in childless households; made the funds available until expended; allowed States to grant discretionary exemptions from the time limits for up to 15 percent of the State’s caseload potentially subject to the time limits
AREERA	No change
Agriculture Appropriations Act of 2001	No change
2002 Farm Bill	Authorized additional funding for States that pledge to offer work slots to all adults subject to the 3-month time limit, and eliminated the requirement that 80 percent of unmatched funds be used for adults subject to the time limit
2008 Farm Bill	Permitted the use of E&T funds for job retention services for up to 90 days after individuals who received E&T services gain employment
ARRA	Allowed States to temporarily suspend the time limit for certain adults ages 18–49 without disabilities in childless households
2014 Farm Bill	No change
2018 Farm Bill	Increased funding for SNAP E&T programs and reduced available caseload exemptions from the time limit for “able-bodied adults without dependents”
FFCRA	Temporarily and partially suspended the time limit for adults ages 18–49 without disabilities in childless households, beginning April 1, 2020 through the end of the month subsequent to the month in which the COVID-19 Federal public health emergency declaration is lifted (time limit was reinstated as of July 1, 2023)
CAA	No change
ARPA	No change

Table F.3H. Selected features of SNAP under past legislation—treatment of legally resident noncitizens

Legislation	Treatment of legally resident noncitizens ^a
Food Stamp Act of 1964, as amended	No disqualifications
Food Stamp Act of 1977	No disqualifications
Food Stamp amendments of 1979 and 1980	No disqualifications
OBRA of 1981 and Food Stamp amendments and Reauthorization Act of 1981	The 1980 amendments required certification workers to report an ineligible noncitizen to the Immigration and Naturalization Service; income and resources of noncitizens' sponsors were deemed to noncitizen for three years after entry into the country
Food Stamp amendments of 1982 and Continuing Resolution of 1984	No disqualifications
1985 Food Security Act	No disqualifications
1987 Homeless Assistance Act	No disqualifications
HPA of 1988	No disqualifications
FACTA	No disqualifications
Amendments to FACTA of 1991	No disqualifications
MLCHRA	No disqualifications
PRWORA	Permanent resident noncitizens disqualified unless they have 40 quarters of qualified work history in the United States or are currently or were formerly members of the U.S. armed forces; members of their families also exempt; refugees, asylees, and deportees eligible for five years after entering the United States
BBA	No change
AREERA	Restored eligibility to permanent resident noncitizens lawfully in the United States on August 22, 1996, and disabled, blind, or younger than age 18, or 65 or older on August 22, 1996; extended eligibility for refugees, asylees, and deportees from five to seven years after entering the United States
Agriculture Appropriations Act of 2001	No change
2002 Farm Bill	Restored eligibility to qualified noncitizens otherwise eligible for SNAP and who are receiving disability benefits regardless of date of entry (effective FY 2003); are younger than age 18 regardless of date of entry (effective FY 2004); or have lived in the United States for five years as qualified noncitizens (effective April 2003)
2008 Farm Bill	No change
ARRA	No change
2014 Farm Bill	No change
2018 Farm Bill	No change
FFCRA	No change
CAA	No change
ARPA	No change

^a Undocumented immigrants have always been ineligible for SNAP.

Table F.3I. Selected features of SNAP under past legislation—other changes

Legislation	Other changes
Food Stamp Act of 1964, as amended	Nationwide program
Food Stamp Act of 1977	Eliminated the purchase requirement, which required that all participating households purchase their food stamps, paying an amount commensurate with their income and expenses
Food Stamp amendments of 1979 and 1980	Increased State incentives for reducing error; Social Security numbers required; limits on eligible students; residents of shelters for battered women and disabled in small groups may participate; established quality control system
OBRA of 1981 and Food Stamp amendments and Reauthorization Act of 1981	Tightened definition of household, no extra benefits for strikers, prorated first month benefits; for Puerto Rico, replaced the Food Stamp Program with a block grant Nutrition Assistance Program
Food Stamp amendments of 1982 and Continuing Resolution of 1984	Replaced three-tiered incentive system with increased administrative funding for States with error rates below 5 percent, limited student eligibility, benefits rounded down, job search requirements, Puerto Rico cashout prohibited; SNAP household definition altered; no initial-month benefits less than \$10; Supplemental Security Income and Social Security cost-of-living adjustments disregarded up to three months; new definition of disabled
1985 Food Security Act	New definition of disabled; Puerto Rico block grant funds; Job Training Partnership Act students exempted from categorical restriction; residents of publicly operated mental health centers may participate
1987 Homeless Assistance Act	Outreach to homeless individuals and other hard-to-serve groups; simplified application process for these groups; expanded eligibility for expedited source
HPA of 1988	Expanded the definition of disabled; excluded advanced earned income tax credit payments as income
FACTA	Rules for student eligibility modified
Amendments to FACTA of 1991	All Title IV payments and Bureau of Indian Affairs educational assistance excluded from the program's countable income (Higher Education Amendments of 1992 [PL 102-325])
MLCHRA	Simplified the household definition by allowing individuals who live together but do not purchase and prepare food together to be in separate program households; spouses still must be in the same household
PRWORA	A child younger than age 22 living with parents must apply as part of the parents' household even if the child is married or has children; all States must convert food stamp benefits from paper coupons to electronic benefit transfer systems by 10/1/02
BBA	None
AREERA	None
Agriculture Appropriations Act of 2001	None
2002 Farm Bill	Allowed States to offer transitional SNAP benefits for up to five months after households lose TANF cash assistance and allowed States to extend semiannual reporting of changes to all households not exempt from periodic reporting
2008 Farm Bill	Renamed the Food Stamp Program the Supplemental Nutrition Assistance Program; renamed the Food Stamp Act of 1977 the Food and Nutrition Act of 2008; prohibited issuance of paper coupons effective 6/18/08; food stamp coupons no longer redeemable at stores after 8/17/09; allowed States to place all households on simplified reporting; allowed State agencies to provide transitional food stamp benefits to households that cease to receive cash assistance; and allowed applicants to sign an application through a recorded verbal assent over the telephone
ARRA	None
2014 Farm Bill	None

Legislation	Other changes
2018 Farm Bill	None
FFCRA	None
CAA	Temporarily expanded eligibility to students who were eligible to participate in a State or Federally financed work study program during the regular school year; or who had an expected family contribution of \$0 in the current academic year. The two temporary exemptions were in effect until the first recertification of a household beginning no earlier than 30 days after the COVID-19 public health emergency was lifted.
ARPA	Allocated new administrative funding and funding for improvements to SNAP online purchasing and technology

APPENDIX G

^a ARRA increased maximum benefits from April 2009 through October 2013.

^b The CAA, effective January 1, 2021, raised maximum benefit values to 115 percent of the cost of the Thrifty Food Plan in June 2020 for a reference family of four, rounded to the lowest dollar increment. ARPA extended the increase through September 2021.
