ALL DATA SUBJECT TO REVISION

- States tend to distribute multiple months of P-EBT benefits in a single issuance. Benefits distributed in June, for example, may represent the value of P-EBT benefits for participants' virtual school days in the months of March through May.
- Because states distribute multiple months of benefits in a single issuance, participant counts must be interpreted with caution. Participants who receive a combined P-EBT benefit in June for the months of March through May will appear in the participant count for June only. A household or person who receives a combined benefit for March and April in June, and a second combined benefit for May and June in July will appear in the June and July participant counts. As result, the number of P-EBT beneficiaries is much greater than any single monthly count, but summing the participant counts across months will overstate the number of beneficiaries.
- States issue P-EBT benefits to individual children in cases when they are unable to group children into household units. This is sometimes an issue where P-EBT beneficiaries are not SNAP recipients. Because these children are counted as separate households, the household count in this table overstates the number of unique household beneficiaries.
