## *Final Report, Volume II*

---

**December 2025**

**Contract:** 140D0424A0040

**Order:** 140D0424F1045

### **Authors**

Courtenay Kessler, Andrew Bryant, Kate Munkacsy, Sophia Maxson, Daniel Ressler, Rashi Saluja, and Kelsey Farson Gray

### **Submitted to**

USDA Food and Nutrition Service  
Office of Evidence, Analysis, and  
Regulatory Affairs  
1320 Braddock Place  
Alexandria, VA 22314

**Project Officer:** Rachel Zack  
Grant Lovellette

### **Submitted by**

Westat  
1600 Research Boulevard  
Rockville, MD 20850

**Project Director:** Courtenay Kessler

This study was conducted by Westat under Contract No. GS-00F-009DA/140D0424A0040 with the U.S. Department of Agriculture's (USDA) Food and Nutrition Service. The findings and conclusions in this report are those of the authors and should not be construed to represent any official USDA or U.S. Government determination or policy.

### **Suggested Citation**

Kessler, C., Bryant, A., Munkacsy, K., Maxson, S., Ressler, D., Saluja, R., & Farson Gray, K. (2025). *National- and State-level estimates of WIC eligibility and WIC program reach in 2023*. Westat. U.S. Department of Agriculture, Food and Nutrition Service.

## **Nondiscrimination Statement**

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (e.g., Braille, large print, audiotape, American Sign Language, etc.) should contact the State or local agency that administers the program or contact USDA through the Telecommunications Relay Service at 711 (voice and TTY). Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD-3027, found online at [How to File a Program Discrimination Complaint](#) and at any USDA office or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To request a copy of the complaint form, call (866) 632-9992. Submit your completed form or letter to USDA by: (1) mail: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue, SW, Mail Stop 9410, Washington, D.C. 20250-9410; (2) fax: (202) 690-7442; or (3) email: [program.intake@usda.gov](mailto:program.intake@usda.gov).

**USDA is an equal opportunity provider, employer, and lender.**

## Acknowledgments

---

The authors gratefully acknowledge the guidance provided by numerous individuals at the U.S. Department of Agriculture's Food and Nutrition Service (FNS) and other organizations. Rachel Zack and Grant Lovellette, who each served as the FNS Project Officer, provided leadership and guidance for the project. We also thank the FNS staff who provided insight and review throughout the project. Staff members of the Centers for Disease Control and Prevention supplied tabulations of national- and State-level breastfeeding rates from the National Immunization Survey.

Many Westat/Insight Policy Research colleagues made key contributions to this report. We thank Josh Rozen, Richard Griffiths, and Ismael Flores Cervantes, whose work in developing the estimates was invaluable. We acknowledge the Westat publications team for editing and producing the report. We also thank our two technical expert panel members: Carolyn Liebler and Melinda Newport. We also thank Christine Borger for her careful review and comments on the report.

# Appendix A

## Improvements to the WIC Eligibility Estimates: Calendar Year 2023

---

This appendix describes two improvements to the methodology used to estimate WIC eligibility in 2023. The project team made the following improvements to the 2023 estimation methodology:

- › **Enhancement 1:** Estimate calendar year (CY) 2023 coverage rates for Asian, non-Hispanic and Native Hawaiian/Pacific Islander, non-Hispanic individuals.
- › **Enhancement 2:** Estimate historical coverage rates for the American Indian/Alaska Native, non-Hispanic; Asian, non-Hispanic; and Native Hawaiian/Pacific Islander, non-Hispanic race and ethnicity categories through CY 2016.

The approaches to these enhancements were developed through biweekly meetings with the Food and Nutrition Service (FNS) and informed by meetings with three technical experts: Gwynne Evans-Lomayesva (Snow Clan, Hopi Tribal Nation; University of Pennsylvania), Carolyn Liebler (University of Minnesota), and Melinda Newport (former Chickasaw Nation WIC director).

### A. Enhancement 1: Estimate Asian, non-Hispanic and Native Hawaiian/Pacific Islander, non-Hispanic Coverage Rates

---

The WIC eligibility reports historically provide WIC coverage rates by four race and ethnicity categories: (1) Hispanic/Latino; (2) White-only, non-Hispanic; (3) Black-only, non-Hispanic; and (4) two or more races or other race, non-Hispanic. The 2022 report (Kessler et al., 2024) expanded these categories to include an American Indian/Alaska Native, non-Hispanic category as a subset of the two or more races or other race, non-Hispanic category, including non-Hispanic individuals who identified as only American Indian/Alaska Native or two or more races, including American Indian/Alaska Native. Thus, the category could be considered any American

Indian/Alaska Native, non-Hispanic. FNS and the project team selected this grouping after examining the number of American Indian/Alaska Native individuals included in the 2023 Annual Social and Economic Supplement of the Current Population Survey (CPS ASEC) and identifying clear differences in how the FNS administrative data and the national survey data reported race and ethnicity, leading to improbable coverage rates.<sup>1</sup>

Although the project team did not anticipate similar measurement issues for coverage rates for Asian and Native Hawaiian/Pacific Islander individuals, the team had concerns about potential sample size limitations, especially for the Native Hawaiian/Pacific Islander group. The project team identified two approaches for defining the two new race and ethnicity categories. Both approaches restricted the new category to non-Hispanic individuals to preserve the Hispanic category currently used in the report. The two approaches were as follows:

- **Option 1: Produce estimates for Asian, non-Hispanic and Native Hawaiian/Pacific Islander, non-Hispanic categories.** Both categories include individuals who identify as only Asian or only Native Hawaiian/Pacific Islander and multiracial individuals. These groups would be subsets of the current two or more races or other race, non-Hispanic category, aligning with how American Indian/Alaska Native, non-Hispanic race and ethnicity are presented in the report. Importantly, these new categories would not be mutually exclusive.
- **Option 2: Produce estimates for Asian-only, non-Hispanic and Native Hawaiian/Pacific Islander-only, non-Hispanic categories.** This approach changes the composition of the two or more races or other race, non-Hispanic category, which would include only non-Hispanic individuals who identify as two or more races and American Indian/Alaska Native-only, non-Hispanic individuals.

After a preliminary review of the findings, FNS and the project team opted to develop estimates using option 1. The remainder of this appendix details the method and findings for option 1.

## 1. Method

The new coverage rate estimation methods employ the existing eligibility estimation procedures. The CPS ASEC (U.S. Census Bureau, n.d.-a) captures income and participation in programs conferring adjunctive income eligibility for CY 2023, and it served as the main data source for estimating the number of individuals eligible for WIC (the coverage rate denominator). Using the original racial and ethnic identities reported in the CPS ASEC (variable PRDTRACE; U.S. Census Bureau, n.d.-a), the project team appended variables to identify individuals who reported Asian or Native Hawaiian/Pacific Islander race.

The study team applies adjustment factors to the population determined as income- or adjunctively income-eligible from the CPS ASEC to better reflect the WIC population (e.g., breastfeeding practices, adjusting for multiple births and infant and fetal deaths). For the new race and ethnicity categories, the project team applied the same adjustment factors and weights as those used in the current estimation methodology. For adjustment factors that are typically

---

<sup>1</sup> See appendix A of Kessler et al. (2024) for more details about the measurement issues.

stratified by race and ethnicity, the project team used the adjustment factors produced for the two or more races or other race, non-Hispanic category because of anticipated challenges gathering data for the more detailed race and ethnicity categories.<sup>2,3</sup>

For the coverage rate numerator (WIC participants), the project team stratified FNS administrative data (FNS, 2024) reporting participation by quarter (averaged to estimate an annual unduplicated count) and participant category by the new race and ethnicity categories using participant data collected for the WIC Participant and Program Characteristics 2022 (WIC PC) report (Zvavitch et al., 2024). WIC PC data provide information on race and ethnicity that is not available in the FNS administrative data.

In addition to the new coverage rate estimates, the project team produced Wald 95 percent confidence intervals for each coverage rate. These confidence intervals provide a measure of precision for the estimates and can help identify potential concerns with presenting and interpreting findings. For the 2022 WIC Eligibility Report, the project team presented all point estimates unless the 95 percent confidence interval had a lower bound below 0 percent and an upper bound above 100 percent. The project team examined whether confidence intervals for each coverage rate met this criterion.

## 2. Findings

### ***Population Estimates: CPS ASEC***

To determine population estimates, the project team first tabulated the number of individuals represented by the CPS ASEC by race and ethnicity categories. These findings do not capture individuals who live in the U.S. territories that administer WIC. Table A.1 stratifies the population by all race and ethnicity categories presented in the report, including the new Asian, non-Hispanic and Native Hawaiian/Pacific Islander, non-Hispanic categories as subsets of the two or more races or other race, non-Hispanic category. The new categories include multiracial individuals who identified as Asian or Native Hawaiian/Pacific Islander. The population is further stratified by infants, children up to age 5, and women of reproductive age (i.e., between ages 15 and 45).

---

<sup>2</sup> The Centers for Disease Control and Prevention could not provide breastfeeding information from the National Immunization Survey for American Indian/Alaska Native individuals.

<sup>3</sup> The development of more specific adjustment factors could be considered for future estimates.

**Table A.1. Population estimates from the 2024 CPS ASEC by race and ethnicity**

Race and Hispanic ethnicity	Total	Infants	Children	Women
<b>Total</b>	<b>84,390,973</b>	<b>3,487,959</b>	<b>14,977,140</b>	<b>65,925,874</b>
Hispanic	19,766,941	952,844	4,080,034	14,734,063
Black-only, not Hispanic	11,947,739	413,267	2,303,625	9,230,847
White-only, not Hispanic	43,190,968	1,675,790	6,835,849	34,679,329
Two or more races or other race, not Hispanic <sup>a</sup>	9,485,325	446,057	1,757,633	7,281,636
American Indian/Alaska Native, not Hispanic	1,268,137	63,898	190,135	1,014,104
Asian, not Hispanic	6,624,866	278,279	1,145,262	5,201,326
Native Hawaiian/Pacific Islander, not Hispanic	467,023	22,224	77,488	367,311

CPS ASEC = Annual Social and Economic Supplement of the Current Population Survey

<sup>a</sup> Non-Hispanic individuals who self-identified as two or more races or Asian, American Indian/Alaska Native, or Hawaiian/Pacific Islander are included in the two or more races or other race, not Hispanic category.

Source: U.S. Census Bureau, n.d.-a

The total population size for Native Hawaiian/Pacific Islander, non-Hispanic individuals is relatively small, even without considering WIC eligibility criteria or participant categories. As expected, this finding is particularly striking for infants (this category includes individuals only in a single year of life; both children and women include multiple years). Even at its largest grouping (total infants, children, and women, including multiracial individuals), fewer than half a million individuals identify as Native Hawaiian/Pacific Islander, non-Hispanic.

### ***New Coverage Rates for 2023***

The project team next estimated WIC coverage rates by race and ethnicity. Table A.2 includes coverage rates and Wald 95 percent confidence intervals for total individuals eligible for WIC. The project team opted not to stratify by participant category because of sample size concerns identified in tables 1 and 2. These estimates are also presented in tables 3.1 and B.6.

**Table A.2. CY 2023 coverage rates and 95 percent confidence intervals by race and ethnicity**

	Number eligible	Number participating	Coverage rate (%)	CI lower bound (%)	CI upper bound (%)
<b>Total</b>	<b>11,829,215</b>	<b>6,631,309</b>	<b>56.1</b>	<b>54.5</b>	<b>57.6</b>
Hispanic/Latino	4,341,509	2,865,239	66.0	63.5	68.5
Black-only, not Hispanic	2,477,494	1,308,652	52.8	49.5	56.2
White-only, not Hispanic	3,742,399	1,840,027	49.2	46.3	52.0
Two or more races or other race, not Hispanic <sup>a</sup>	1,238,566	602,318	48.6	43.4	53.9
American Indian/Alaska Native, not Hispanic	241,653	112,539	46.6	34.7	58.5
Asian, not Hispanic	618,958	285,804	46.2	38.8	53.6
Native Hawaiian/Pacific Islander, not Hispanic	74,125	46,583	62.8	29.7	96.0

CI = confidence interval; CY = calendar year

<sup>a</sup>Non-Hispanic individuals who self-identified as two or more races or Asian, American Indian/Alaska Native, or Hawaiian/Pacific Islander are included in the two or more races or other race, not Hispanic category.

Sources: FNS, 2024; IPUMS-USA, n.d.; U.S. Census Bureau, n.d.-a; Zvavitch et al., 2024

The coverage rate for **Asian, non-Hispanic individuals** is lower than the coverage rates for all other race and ethnicity categories. At about 46 percent, the coverage rate for this subset of the two or more races or other race, non-Hispanic category is 2 percentage points lower than the coverage rate for the overall two or more races or other race, non-Hispanic category. The 95 percent confidence interval spans about 15 percentage points, indicating less precision (as expected) than the larger two or more races or other race, non-Hispanic category.

The coverage rate for **Native Hawaiian/Pacific Islander, non-Hispanic individuals** is quite high at about 63 percent, only 3 percentage points below the highest coverage rate (for Hispanic individuals, at 66 percent). However, the 95 percent confidence interval for Native Hawaiian/Pacific Islander, non-Hispanic individuals is wide, representing about 66 percentage points.

## B. Enhancement 2: Estimate Historical Coverage Rates for New Race and Ethnicity Categories

Under the second enhancement for the 2023 WIC Eligibility Report, the project team developed historical coverage rates for American Indian/Alaska Native, non-Hispanic individuals for CY 2016–2021. The project team also developed historical coverage rates for the new Asian and Native Hawaiian/Pacific Islander categories for CY 2016–2022.

As section A describes, the 2022 WIC Eligibility Report included the first coverage rate for American Indian/Alaska Native, non-Hispanic individuals, although it included estimates only for CY 2022. The project team explored methods of producing historical coverage rates back through

CY 2016, the first year of data presented in the current report.<sup>4</sup> Although producing this coverage rate for many years should have been straightforward, the COVID-19 pandemic affected the 2020 and 2021 CPS ASEC data collection efforts and complicated the computation of the CY 2019 and CY 2020 coverage rates and their standard errors. During these years, the surveys experienced a substantial increase in the nonresponse rate (Farson Gray et al., 2022, chapter 6; Rothbaum & Bee, 2021). To address the potential impact of the nonresponse rate, the U.S. Census Bureau released alternative sets of weights created using additional nonresponse weighting procedures for the 2020 and 2021 CPS ASEC microdata file (which inform, respectively, the CY 2019 and CY 2020 estimates). The alternative weights used a process known as entropy balancing to adjust for nonrandom nonresponse in the March 2020 survey (Rothbaum & Bee, 2021). The project team used this approach to ensure the correct weights were applied for the new race and ethnicity categories.

## 1. Methods

To produce all historical estimates, the project team started with the population estimated for that year, incorporating relevant CPS ASEC data and adjustment factors. For the historical coverage rates for CY 2016–2018 and CY 2021–2022, the same general approach outlined in section A was applied to data from prior years. For CY 2019 and CY 2020, the project team applied the methods described in chapter 6 of the 2019 WIC Eligibility Report. As part of that year’s report, the authors computed national-level standard error estimates using bootstrap variance estimates for a set of survey items using the entropy balance weights under the assumption of a simple random sample. They then computed estimated design effects using the original March 2020 supplement weights and the original CPS ASEC replicate weights for each year. The design effects for survey items were specific to race and ethnicity and age for the WIC-eligible and total population. The design effects incorporated the four race and ethnicity groups used in that report. For this year’s enhancements, the project team revisited the design effects to ensure they allowed us to produce coverage rates for the American Indian/Alaska Native, non-Hispanic; Asian, non-Hispanic; and Native Hawaiian/Pacific Islander, non-Hispanic categories. To preserve the original findings, the project team opted to use the design effects and weights as they were originally applied. Each record in the file was appended with the detailed race (using PRDTRACE), and the project team retabulated the eligible population using the new race and ethnicity categories. Standard errors and confidence intervals were produced using the same methods described in chapter 6 of the 2019 WIC Eligibility Report (additional detail provided in appendix A of the 2022 WIC Eligibility Report).

---

<sup>4</sup> The 2020 WIC Eligibility Estimates project made significant updates to the estimation methodology, which were applied back to 2016. Years before 2016 have not been included in subsequent reports because the methodologies are not consistent and changes in trends would not clearly indicate an actual change instead of a change because of the shift in methodology.

## 2. Findings

The project team produced estimates for all new race and ethnicity categories for all historical years (2016–2022) in addition to the current year (2023). Table A.3 includes coverage rates and confidence intervals for the new categories. Across the years, coverage rate estimations fluctuate for all new categories, with the largest changes in the American Indian/Alaska Native, non-Hispanic and Native Hawaiian/Pacific Islander, non-Hispanic categories. These categories also showed the widest confidence intervals (indicating lower precision), which results from the smaller sample sizes observed in these categories (figure A.1 depicts the confidence intervals). Results should be interpreted with caution.

**Table A.3. Historical coverage rates and Wald 95 percent confidence intervals (percentages) for detailed race and ethnicity categories, CY 2016–2023**

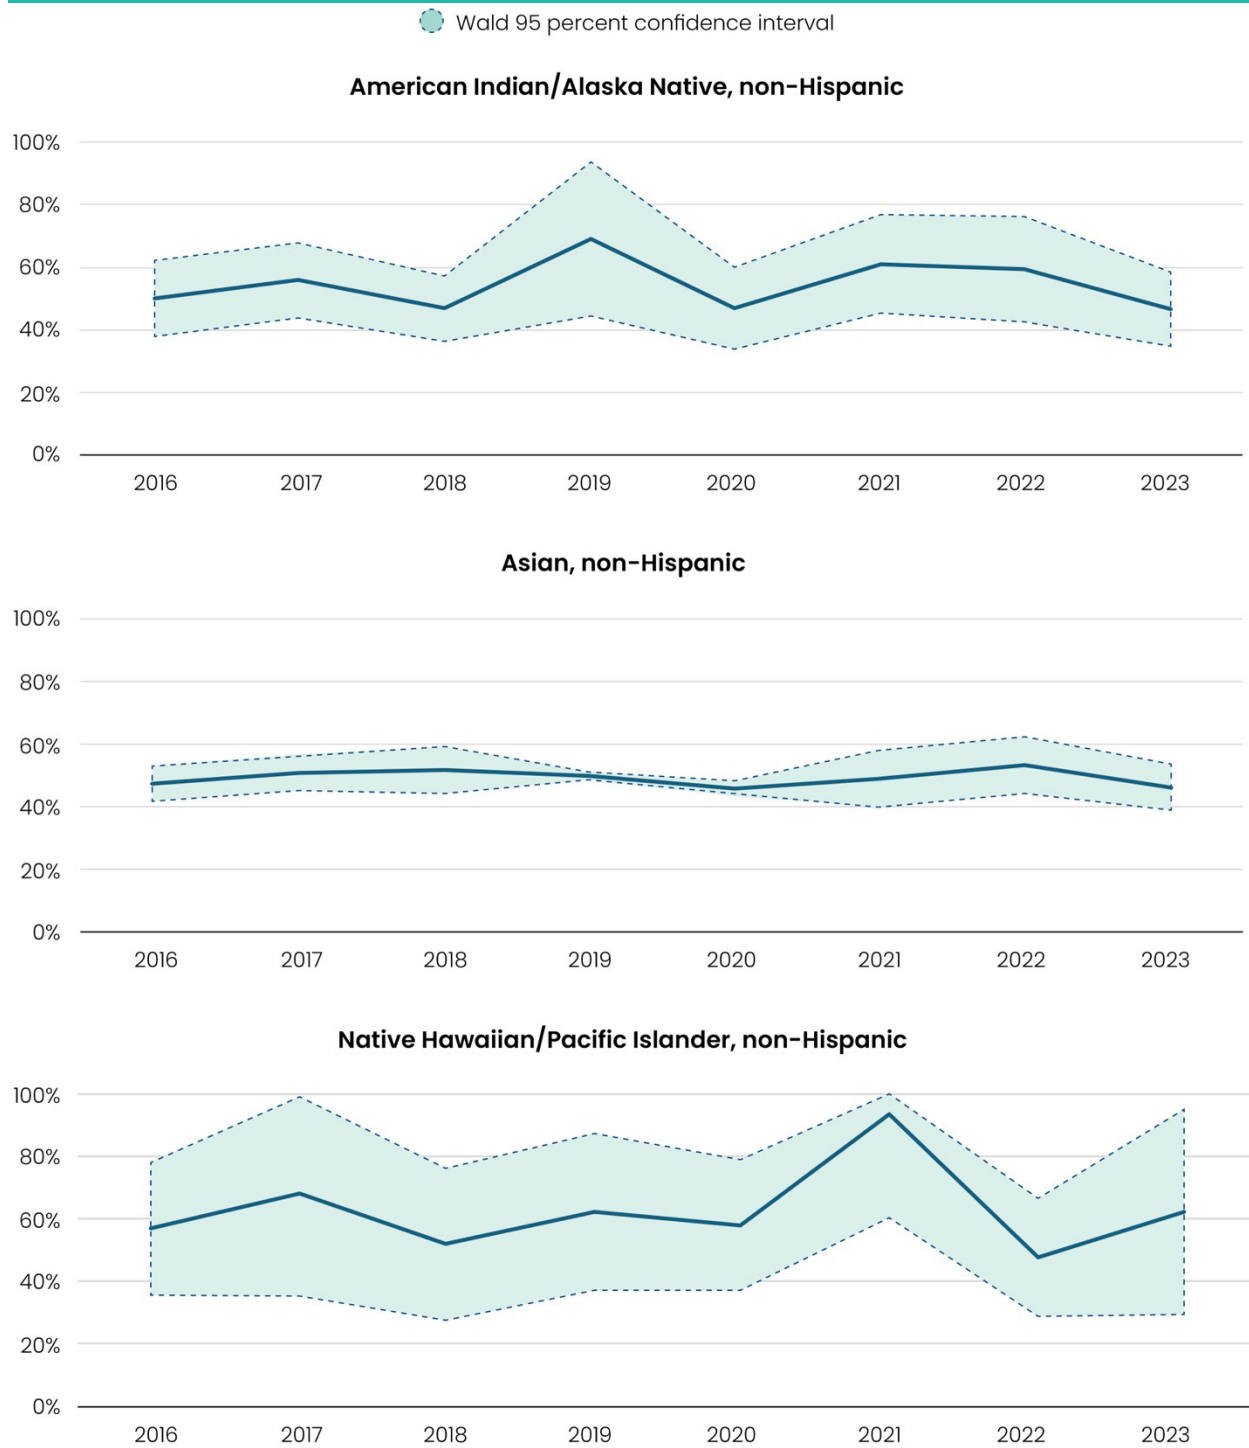

Year	Two or more races or other race, not Hispanic <sup>a</sup>			American Indian/Alaska Native, not Hispanic			Asian, not Hispanic			Native Hawaiian/Pacific Islander, not Hispanic		
	Coverage rate	CI lower bound	CI upper bound	Coverage rate	CI lower bound	CI upper bound	Coverage rate	CI lower bound	CI upper bound	Coverage rate	CI lower bound	CI upper bound
2016	49.1	45.1	53.2	50.0	37.9	62.2	47.3	41.6	53.0	57.4	36.1	78.6

# Appendix B

## Measures of Precision for the Estimates of Eligibility

---

Data from several large-scale, complex, nationally representative surveys, including the Current Population Survey Annual Social and Economic Supplement (CPS ASEC; U.S. Census Bureau, n.d.-a), the American Community Survey (ACS; IPUMS-USA, n.d.), and the Puerto Rico Community Survey (PRCS; IPUMS-USA, n.d.) contributed to coverage and participation estimates in this report. Several sources of error can cause sample estimates to differ from the true population values. These sources of error are commonly classified into two major categories: sampling errors and nonsampling errors.

To compensate for sampling errors, weights were constructed and prepared following data collection to inflate the respondents' data to represent the entire universe. To measure sampling errors, standard errors were produced for the 2023 national-, regional-, and State-level estimates of eligibility for WIC.<sup>5</sup>

Nonsampling errors occur in cases with a complete enumeration of a target population. Sources of error include unusable responses to vague or sensitive questions (e.g., whether an individual fully reports the kinds of benefits received); nonresponses; and errors in coding, scoring, and processing data. Nonresponse to the survey is one of the most common sources of nonsampling error because a characteristic being estimated may differ, on average, between respondents and nonrespondents. Systematic errors are reduced by the survey methodology used, including careful wording of questionnaire items and well-designed procedures for data collection and data management. However, no formulas can assess these types of nonsampling errors. Additional sources of error could include mismatches between concepts used for eligibility and those used for participation information, such as slight differences in definitions of WIC units or types of income.

---

<sup>5</sup> Estimates of WIC eligibility for U.S. territories other than Puerto Rico are based on population data from the IDB, not on samples. These estimates are not subject to sampling variability.

Coverage rates for certain subgroups with minimal coverage in the national surveys (e.g., race/ethnicity stratifications in small States with homogenous populations) sometimes exhibit coverage rate point estimates over 100 percent. In theory, coverage rates should fall between 0 and 100; in reality, a coverage rate over 100 would be possible if States enrolled more WIC participants than were truly eligible for the program. The third National Survey of WIC Participants indicates the WIC case error rate is 2 percent (Magness et al., 2021), suggesting a low likelihood of a true coverage rate above 100 percent. To increase sample size and improve the precision of estimates for subgroups, the project team pooled 2 years of ACS data. This approach reduces the number of coverage rates over 100 percent. Any subgroups with coverage rate estimates over 100, even after pooling, are suppressed from the report.

To assist with interpreting results, some tables in this report include one of two measures of precision. Some tables include **coefficients of variation** (U.S. Census Bureau, 2020, chapter 7) as a concise measure of precision; others include **Wald 95 percent confidence interval bounds** to provide more information about where the coverage rate estimations are most likely to fall.

This appendix includes four sections:

- Section A presents the standard errors and coefficients of variation for the national-level estimates.
- Section B presents the standard errors and coefficients of variation for the regional- and State-level estimates presented in this report. The standard errors for the regional- and State-level estimates were derived using the replicate weight methodology described in appendix E of Trippe et al. (2019).
- Section C presents the Wald 95 percent confidence intervals for national- and State-level estimates.
- Section D presents the methodology for conducting tests of statistical significance in the tables and figures presented in this report.

## A. Standard Errors and Coefficients of Variation for National-Level Estimates

---

Table B.1 presents the national-level estimates of WIC eligibility by participant category and race and Hispanic ethnicity and the standard errors and coefficients of variation. The coefficient of variation is the ratio of the standard error to the eligibility estimate. Because the coefficient of variation is expressed in percentage terms, it facilitates easier comparison of precision across estimates providing a measure of the relative precision of the estimates. A coefficient of variation equal to 1 indicates the standard error is equal to the point estimate. The U.S. Census Bureau recommends that coefficients of variation over 30 percent be interpreted with caution (U.S. Census Bureau, 2023) because of the lack of precision in the estimate.

The coefficients of variation for the 2023 national eligibility estimates were higher for infants and postpartum women (both 3.9 percent) than pregnant women (1.1 percent) or children (1.5 percent), reflecting the larger sample sizes for pregnant women and children.

**Table B.1. Standard errors and coefficients of variation for estimated number of individuals eligible for WIC by participant category and race and Hispanic ethnicity: CY 2023**

Participant category	Hispanic/Latino	Black-only, not Hispanic	White-only, not Hispanic	Two or more races or other race, not Hispanic <sup>a</sup>	Total

Note: The coefficient of variation is defined as the ratio of the standard error to the eligibility estimate. Estimates for U.S. territories other than Puerto Rico are not included in regional totals or standard errors.

CY = calendar year

Sources: IPUMS-USA, n.d.; U.S. Census Bureau, n.d.-a

The coefficients of variation for the estimated numbers of individuals eligible for WIC were higher at the State level than the national level (see table B.3). For States, the coefficient of variation ranged from 1.6 percent in California and Texas to 9.4 percent in Vermont. Estimates with relatively larger coefficients of variation should be interpreted with caution, especially for small States. At the regional level, the coverage rates were somewhat more precise than the State-level estimates, with coefficients of variation ranging from 1.5 in the Southeast, Southwest, and Western Regions to 1.9 in the Mountain Plains Region.

**Table B.3. Standard errors and coefficients of variation for estimated number of individuals eligible for WIC by State and FNS Region: CY 2023**

<b>Total</b>	<b>11,799,967</b>	<b>165,769</b>	<b>1.4</b>

Note: The coefficient of variation is defined as the ratio of the standard error to the eligibility estimate. State and FNS Region estimates include individuals in ITOs who were eligible for WIC. Puerto Rico is included in the list of States. Estimates for U.S. territories other than Puerto Rico are not included in regional totals or standard errors.

CY = calendar year; FNS = Food and Nutrition Service; ITO = Indian Tribal Organization

Sources: IPUMS-USA, n.d.; U.S. Census Bureau, n.d.-a

The coefficients of variation for State-level coverage rates by participant category were generally larger than the coefficients observed for overall State-level coverage rates (see table B.4). The coefficients of variation for infant coverage rates ranged from 4.2 percent in Texas to 24.3 percent in Vermont. Similarly, the coefficients of variation were large for the estimated coverage rates by race and Hispanic ethnicity by State (see table B.5). For example, the coefficients of variation for White-only, non-Hispanic individuals ranged from 3.4 percent in New York to 25.5 percent in the District of Columbia. It is important to use caution when examining State coverage rates by participant category and race and ethnicity, especially for small States.

**Table B.4. Coefficients of variation (percentages) of WIC coverage rates by State and participant category: CY 2023**

Note: The coefficient of variation is defined as the ratio of the standard error of the coverage rate to the point estimate of the coverage rate. Puerto Rico is included in the list of States.

Estimates for U.S. territories other than Puerto Rico are not included in the totals.

CY = calendar year

† Indicates an unreliable coverage rate over 100 percent

CY = calendar year

† Indicates an unreliable coverage rate over 100 percent or a coverage rate where the lower bound of the 95 percent confidence interval is below 0 percent and the upper bound is over 100 percent

<sup>a</sup> This category includes non-Hispanic individuals who self-identified as two or more races or as a race other than White. These categories were combined because of sample size concerns.

Sources: IPUMS-USA, n.d.; U.S. Census Bureau, n.d.-a; Zvavitch et al., 2024

## C. Confidence Intervals

Tables B.6 and B.7 present national coverage rates with Wald 95 percent confidence intervals by participant characteristic and by participant category and race and Hispanic ethnicity. Table B.8 presents national participation rates by race and Hispanic ethnicity. Tables B.9 and B.10 present State-level coverage rates and participation rates with Wald 95 percent confidence intervals by participant category.

**Table B.6. WIC coverage rate with confidence intervals (percentages) by participant characteristics: CY 2023**

Characteristic	Coverage rate	Lower bound	Upper bound
<b>Total</b>	<b>56.1</b>	<b>54.5</b>	<b>57.6</b>
<b>Participant category</b>			
Infants	82.4	76.1	88.6
Children	47.9	46.6	49.3
1-year-old children	67.4	63.2	71.6
2-year-old children	52.5	49.2	55.7
3-year-old children	45.1	42.3	48.0
4-year-old children	26.9	25.3	28.4
Pregnant women	49.4	48.3	50.4
Postpartum women	72.9	67.4	78.4
Breastfeeding women	70.8	65.5	76.1
Non-breastfeeding women	76.7	70.8	82.6
<b>Race and Hispanic ethnicity<sup>a</sup></b>			
Hispanic/Latino	66.0	63.5	68.5
Black-only, not Hispanic	52.8	49.5	56.2
White-only, not Hispanic	49.2	46.3	52.0
Two or more races or other race, not Hispanic <sup>b</sup>	48.6	43.4	53.9
American Indian/Alaska Native, not Hispanic <sup>c</sup>	46.6	34.7	58.5
Asian, not Hispanic	46.2	38.8	53.6
Native Hawaiian/Pacific Islander, non Hispanic	62.8	29.7	96.0
<b>Urbanicity</b>			
Metropolitan	61.5	59.3	63.8
Nonmetropolitan	24.1	21.3	27.0

Note: WIC administrative data on participating children by year of age were not available. The numbers of participating children by year of age in this table are based on the distribution among children enrolled in WIC according to WIC PC2022 data. In addition, data on coverage rates by urbanicity are based on WIC PC2022 data. Urbanicity is based on the CPS ASEC measure of metropolitan status, which uses Office of Management and Budget (2021) metropolitan designations and classifies residences as metropolitan or nonmetropolitan. The lower and upper bounds represent the Wald 95 percent confidence interval.

CPS ASEC = Current Population Survey Annual Social and Economic Supplement; CY = calendar year; WIC PC = WIC Participant and Program Characteristics

<sup>a</sup> Estimates for U.S. territories other than Puerto Rico are not included in the estimates of eligible individuals and program participants by race and ethnicity because information on race and ethnicity was not available for the other U.S. territories in the WIC PC2022 data.

<sup>b</sup> Non-Hispanic individuals who self-identified as two or more races or as Asian, American Indian/Alaska Native, or Hawaiian/Pacific Islander are included in the two or more races or other race, not Hispanic category.

<sup>c</sup> The American Indian/Alaska Native, not Hispanic category includes non-Hispanic individuals who identified as American Indian/Alaska Native, including multiracial individuals. These individuals are also included in the two or more or other race, not Hispanic category.

Note: Estimates for the U.S. territories are included in the total and FNS Regions but are not shown separately because of small sample sizes. Estimates of State-level participation rates by year of age for children and other participant categories should be viewed with caution because of the small sample sizes for many States. State and FNS Region eligibility estimates and participant data include individuals in ITOs who were eligible for WIC. The lower and upper bounds represent the Wald 95 percent confidence interval. Confidence intervals for the total and Northeast and Western regional coverage rates are based on coverage rate estimates that exclude the U.S. territories other than Puerto Rico.

CY = calendar year; FNS = Food and Nutrition Service; ITO = Indian Tribal Organization

## D. Statistical Significance Testing for Report Tables and Figures

---

The tables and figures in this report present several types of statistical comparisons: racial and ethnic groups by participant category versus national estimates, State and FNS Region estimates versus national estimates, and 2023 estimates versus 2022 estimates. Statistical significance testing is conducted using z tests. This methodology proceeds with the following steps:

1. Calculate the difference between the two estimates being compared.
2. Calculate the standard error of the difference as the square root of the sum of the estimate variances minus two times the covariance of the two estimates.
3. Divide the step 1 difference by the step 2 standard error and calculate the  $p$  value of the result.
4. If the  $p$  value is less than .05, the difference is said to be statistically significant at the 95 percent confidence level.

# Appendix C

## Detailed Tables for National-Level WIC Eligibility Estimates CY: 2023

This appendix presents tables containing detailed information on the 2023 national-level estimates of WIC eligibility by participant category. The tables document the assumptions and calculations used to produce the national estimates and provide more detailed breakdowns of the estimates by participant category. Several tables include the same information provided in volume I. These tables are repeated to provide a comprehensive record of all methods and estimates used for 2023. Unless otherwise indicated, all tables in this appendix provide information for individuals in the 50 States, the District of Columbia, and the U.S. territories served by WIC (American Samoa, Guam, Puerto Rico, the Commonwealth of the Northern Mariana Islands, and the Virgin Islands).<sup>6</sup> A description of each table follows.

### Policy and National Events Influencing WIC Operations, Eligibility and Program Reach

Several external factors and WIC policy changes influenced WIC program operations in 2023. These changes may influence the estimates and trends presented in this report. For example—

- In February 2022, an infant formula recall led to a national formula shortage. Combined with supply chain issues, the formula shortage continued in 2023, leading to shifts in how infants were fed across the Nation (Economic Research Service, 2024). Breastfeeding practices directly affect who is eligible for WIC and what benefits postpartum women and infants receive.
- In FY 2023, Congress continued to fund an increase to the cash value benefit (CVB) that WIC participants use to purchase fruits and vegetables. Although the FY 2023 CVB levels were only modestly adjusted for inflation above the increased CVB funded in FY 2022, this rise may still have had continued impacts on participation extending into 2023.

<sup>6</sup> Individuals living on Tribal lands and participating in WIC through Tribal Organizations are included within the FNS Region and geographic State associated with the individual Tribal Organization.

- The country continued to deal with challenges related to the COVID-19 public health emergency (PHE). Poverty remained relatively high, although some measures suggest a slight increase in family incomes. Medicaid and Supplemental Nutrition Assistance Program (SNAP) participation also continued at high levels, although these programs began “unwinding” COVID-19 regulations that temporarily increased enrollment. Some WIC clinics began shifting back to pre-COVID policies, while others continued to waive physical presence requirements and issued benefits electronically in an effort to modernize the program. The impact of WIC waivers may have varied across State agencies with different policies. For example, some State agencies used offline electronic benefit transfer (EBT) technology that did not allow for remote benefit issuance while others had online systems that allowed them to issue benefits remotely.

### **Table C.1. Steps, data sources, methods, and adjustment factors used for estimates of WIC eligibility: CY 2023**

This table summarizes the data sources, methods, and adjustment factors used to estimate WIC eligibility for infants, children, and pregnant and postpartum women. The following data sources were used for the 2023 estimates: (1) 2024 CPS ASEC data (U.S. Census Bureau, n.d.-a); (2) 2022 and 2023 ACS and PRCS data (IPUMS-USA, n.d.); (3) U.S. Census Bureau International Database (IDB) data (U.S. Census Bureau, n.d.-b); and (4) National Vital Statistics data (National Center for Health Statistics, n.d.).

### **Table C.2. Estimated average monthly number of individuals eligible for WIC by participant category: CY 2023**

This table shows the estimated average monthly number of individuals eligible for WIC by participant category in 2023 and each group as a percentage of the total number eligible. It also provides the total population in each participant category and the eligibility rate, defined as the percentage of the total population in each participant category estimated to be eligible for WIC.

### **Table C.3a1. Vital Statistics estimates and CPS ASEC estimates for infants and children by year of age and sex: March 2024**

This table shows the Vital Statistics population estimates and CPS ASEC weighted population figures by year of age and sex and the ratio of Vital Statistics estimates to CPS ASEC figures (National Center for Health Statistics, n.d.).

### **Table C.3a2. Effects of applying population adjustment factors to population counts for infants and children in the CPS ASEC by year of age and sex: March 2024**

This table shows the results of applying the population adjustment factors (computed based on the information in table C.3a1) to the weights for infants and children in the March CPS ASEC data (U.S. Census Bureau, n.d.-a).

**Table C.3b1. Four-year accumulations of U.S. Census Bureau estimates and CPS ASEC estimates for pregnant women by year of age and race and Hispanic ethnicity: March 2021–March 2024**

This table shows the adjustment of sampling weights for women of reproductive age in the CPS ASEC data. For each year of age (ages 15–44) and each of four race and ethnicity groups (Black-only, not Hispanic; White-only, not Hispanic; two or more races or other race, not Hispanic; and Hispanic/Latino), the table shows the U.S. Census Bureau population estimates for 2021–2024 (U.S. Census Bureau, 2024b); the 4-year accumulation of the March CPS ASEC total weighted population (U.S. Census Bureau, n.d.-a); and the ratio of those two figures. For example, for the 2023 estimates, that ratio was used as the weight adjustment when the direction of the difference between the U.S. Census Bureau population estimate and the CPS ASEC weighted count (see table C.3b2) was the same as for the 4-year accumulations presented in table C.3b1 (i.e., if the U.S. Census Bureau figure was either greater or smaller in both cases). If the direction of the difference was not the same for a particular group, no weight adjustment was performed (i.e., the weight adjustment factor was 1.0). Table C.3b3 shows the final results of applying the population adjustment factors (computed based on the information in tables C.3b1 and C.3b2).

**Table C.3b2. U.S. Census Bureau estimates and CPS ASEC estimates for pregnant women by year of age and race and Hispanic ethnicity: March 2024**

This table shows the U.S. Census Bureau population estimates and CPS ASEC weighted population figures by year of age and race and Hispanic ethnicity and the ratio of the U.S. Census Bureau population estimates to CPS ASEC figures (U.S. Census Bureau, 2024b; see the description of table C.3b1 for an explanation of how this information was used in the weight adjustment process).

**Table C.3b3. Effects of applying population adjustment factors to population counts for pregnant women in the CPS ASEC by year of age and race and Hispanic ethnicity: March 2024**

This table shows the results of applying the population adjustment factors (computed based on the information in tables C.3b1 and C.3b2) to the weights for women of reproductive age in the March CPS ASEC data.

**Table C.4. Breastfeeding adjustment factor calculations for postpartum women eligible for WIC: CY 2023**

This table shows information on the computation of postpartum eligibility for breastfeeding and non-breastfeeding mothers. The first three sections of the table show three breastfeeding rates based on National Immunization Survey data from the Centers for Disease Control and Prevention—the percentage of new mothers breastfeeding their infants in the hospital after giving birth (the percentage ever breastfed), at 6 months postpartum, and at 12 months postpartum—with variations by race and Hispanic ethnicity.

The next section of the table shows two adjustment factors. The first factor adjusts for the fact that the number of postpartum women can differ from the number of infants because of the

combined impact of multiple births and infant deaths. The second factor, breastfeeding cessation, is used to estimate average monthly breastfeeding rates; that is, the average monthly rate across the first 6 months is assumed to be equal to the mean of the ever-breastfed and 6-month rates multiplied by this factor. This factor, 0.87, is assumed to be constant across the years presented in this report.

The last section of the table shows the final postpartum adjustment factors produced using the information in the prior portions of the table. Factors are shown for estimating breastfeeding and non-breastfeeding eligibility for each race and ethnicity group. For example, for Hispanic/Latino women in 2023, the estimated average monthly number of women eligible for WIC as breastfeeding mothers was computed as 0.4978 times the estimated number of Hispanic/Latino infants eligible for WIC.

**Table C.5. Step-by-step adjustments applied to CPS ASEC data to derive the average monthly number of individuals eligible for WIC by participant category: CY 2023**

This table shows the step-by-step adjustments made from the total number of infants, children, and pregnant women to the final numbers of infants, children, and pregnant and postpartum women eligible for WIC in the United States in 2023; it also shows the total number eligible in the five U.S. territories WIC serves. See tables D.7a and D.7b for the step-by-step adjustments made to derive the total number of individuals eligible for WIC in Puerto Rico and the other four U.S. territories WIC serves, respectively.<sup>7</sup>

**Tables C.6a and C.6b. Estimated average monthly numbers of infants and children by year of age, eligible for WIC by demographic and income characteristics and adjunctive income eligibility: CY 2023**

These tables show the estimates of infants and children eligible for WIC by demographic and income characteristics in the March 2024 CPS ASEC. These tables do not include infants and children in the U.S. territories. Tables C.6a1 and C.6a2 show the characteristics of infants and children eligible for WIC in the data as determined by using unadjusted person weights, and tables C.6b1 and C.6b2 show these characteristics as determined by using weights that have been fully adjusted, including adjustments for the CPS ASEC undercount/overcount (population adjustment), monthly income and certification periods (annual-to-monthly adjustment), and nutritional risk. A comparison of table C.6a and table C.6b shows the impact of the CPS ASEC weight adjustments on the national estimates of infants and children eligible for WIC.

Results are also shown related to counts (see tables C.6a1 and C.6b1) and percentages (see tables C.6a2 and C.6b2). For example, C.6b1 shows that, with the adjusted weights, 872,533 male infants and 903,311 female infants were eligible for WIC in an average month in 2023; C.6b2 shows that, among infants eligible for WIC, 49.1 percent were male, and 50.9 percent were female.

---

<sup>7</sup> Two tables are used because the primary data source used for the Puerto Rico estimates (i.e., the PRCS) differs from the primary data source used for American Samoa, Guam, the Commonwealth of the Northern Mariana Islands, and the Virgin Islands (i.e., the IDB).

**Table C.7. Changes in the total population, number of individuals eligible for WIC, and WIC eligibility rate by participant category: CY 2022–CY 2023**

This table shows the changes in the numbers of individuals in the total population, the population eligible for WIC, and the WIC eligibility rate by participant category between 2022 and 2023.

**Table C.8. Stepwise comparison of changes in average monthly numbers of infants and children eligible for WIC as estimated in the March CPS ASEC: CY 2022–CY 2023**

This table shows the step-by-step percentage changes in the numbers of infants and children from 2022 to 2023 (excluding the U.S. territories). For example, it shows that the number of infants and children eligible for WIC through adjunctive income eligibility saw a 7-percent decrease between 2022 and 2023, while the number of infants and children who met income eligibility criteria increased by 6 percent in the same time period.

**Table C.9. Standard errors and coefficients of variation for estimates by participant category: CY 2023**

This table shows the standard error of the estimate and coefficient of variation for the national estimates of the total population of women, infants, and children and the number of individuals eligible for WIC by participant category.

**Table C.1. Steps, data sources, methods, and adjustment factors used for estimates of WIC eligibility: CY 2023**

Step	Data source(s)	Methods and adjustment factors	
Infants and children			
Categorical eligibility	<ul style="list-style-type: none"><li>■ 2024 CPS ASEC, national estimates</li><li>■ 2022 and 2023 ACS, State estimates</li><li>■ 2022 and 2023 PRCS, Puerto Rico estimates</li><li>■ 2023 IDB, other island territories estimates</li></ul>	Identify individuals aged 0, 1, 2, 3, and 4 in each survey.	
Weight adjustments	<ul style="list-style-type: none"><li>■ National estimates<ul style="list-style-type: none"><li>– 2023 Vital Statistics and March CPS ASEC for 2024</li></ul></li><li>■ State and Puerto Rico estimates<ul style="list-style-type: none"><li>– Postcensal population estimates from U.S. Census Bureau for July 2023</li></ul></li></ul>	Adjust sampling weights to account for undercount or overcount in CPS estimates relative to Vital Statistics estimates by year of age and sex.	
		<b>Adjustment factors for females</b> <ul style="list-style-type: none"><li>■ Infants: 1.0316</li><li>■ 1-year-old children: 0.9454</li><li>■ 2-year-old children: 0.9930</li><li>■ 3-year-old children: 1.0109</li><li>■ 4-year-old children: 0.9498</li></ul>	<b>Adjustment factors for males</b> <ul style="list-style-type: none"><li>■ Infants: 1.0192</li><li>■ 1-year-old children: 0.9572</li><li>■ 2-year-old children: 1.0033</li><li>■ 3-year-old children: 1.0174</li><li>■ 4-year-old children: 0.9379</li></ul>
Income eligibility	<ul style="list-style-type: none"><li>■ 2024 CPS ASEC, national estimates</li><li>■ 2022 and 2023 ACS, State estimates</li><li>■ 2022 and 2023 PRCS, Puerto Rico estimates</li><li>■ 2023 IDB, other island territories estimates</li><li>■ Blended 2022 and 2023 FPGs</li></ul>	Count as eligible if the prior year’s annual income was ≤ 185 percent of the Federal Poverty Guidelines.	
Adjunctive income eligibility	<ul style="list-style-type: none"><li>■ 2024 CPS ASEC</li><li>■ 2022 and 2023 ACS</li><li>■ 2022 and 2023 PRCS</li></ul>	Add as eligible those infants and children in families who reported participating in Medicaid, SNAP, or TANF at any point during the prior calendar year. Use 2023 ACS to impute Medicaid and SNAP participation for those who do not report participating in either program to account for potential underreporting of program participation in CPS ASEC.	

Step	Data source(s)	Methods and adjustment factors
Adjustments for fluctuations in monthly income and certification periods	Average of factors from 2020, 2021, and 2022 Survey of Income and Program Participation panel	<p>Adjust estimates to account for the impact of monthly fluctuations in income and program participation and for the impact of 6- and 12-month certification periods.</p> <ul style="list-style-type: none"> <li>■ Infants adjustment factor (used for estimates from PRCS and IDB data): 1.0015</li> <li>■ Infants adjustment factors by race and ethnicity (used for estimates from CPS ASEC and ACS data): <ul style="list-style-type: none"> <li>– White-only, not Hispanic: 1.0911</li> <li>– All others: 1.0000</li> </ul> </li> <li>■ Children adjustment factor assuming 12-month certification periods (used for estimates from PRCS and IDB data): 1.0000</li> <li>■ Children adjustment factors by race and ethnicity (used for estimates from CPS ASEC data): <ul style="list-style-type: none"> <li>– White-only, not Hispanic: 1.0000</li> <li>– All others: 1.0000</li> </ul> </li> </ul>
Adjustment for nutritional risk	CNSTAT panel; IOM report (2002); FNS guidance	<p>Multiply infant and child estimates by the factor to account for otherwise eligible infants and children who might not be at nutritional risk. Estimates assume all infants and children were at nutritional risk.</p> <p>Adjustment factor for infants and children: 1.0000</p>
<b>Pregnant women</b>		
Categorical eligibility	<ul style="list-style-type: none"> <li>■ 2024 CPS ASEC, national estimates</li> <li>■ 2022 and 2023 ACS, State estimates</li> <li>■ 2022 and 2023 PRCS, Puerto Rico estimates</li> <li>■ 2023 IDB, other island territories estimates</li> <li>■ Average of 3 years of CDC National Vital Statistics data (i.e., 2021–2023 Births: Final Data, 2021–2023 Period Linked Birth/Infant Death Data Files, and 2019–2022 Fetal Death Data Files); Abortion Surveillance System (2020–2022); National Vital Statistics System mortality file (2021–2023)</li> </ul>	<p>National: Identify women of reproductive age (15–44) in the CPS ASEC, and apply adjustments proposed by the CDC (n.d.) to estimate the number of pregnant women based on births, multiple births, abortions, and fetal deaths accounting for an average duration of pregnancy.</p> <p>State and territory: Use as a starting point the final average monthly eligibility estimate for infants. Multiply by the factor to account for the impact of multiple births, induced abortions, and fetal and infant deaths (so the number of pregnant women is not exactly equal to the number of infants).</p>

Step	Data source(s)	Methods and adjustment factors
Weight adjustment	<ul style="list-style-type: none"> <li>■ National estimates <ul style="list-style-type: none"> <li>– Postcensal population estimates from U.S. Census Bureau and March CPS ASEC for 2021, 2022, 2023, and 2024</li> </ul> </li> <li>■ State and Puerto Rico estimates <ul style="list-style-type: none"> <li>– Postcensal population estimates from U.S. Census Bureau for July 2023</li> </ul> </li> </ul>	Adjust sampling weights to account for undercount or overcount in CPS estimates relative to U.S. Census Bureau population estimates by year of age and four race/ethnic categories (White-only, not Hispanic; Black-only, not Hispanic; two or more races or other race, not Hispanic; and Hispanic/Latino).
Income eligibility	<ul style="list-style-type: none"> <li>■ 2024 CPS ASEC, national estimates</li> <li>■ 2022 and 2023 ACS, State estimates</li> <li>■ 2022 and 2023 PRCS, Puerto Rico estimates</li> <li>■ 2023 IDB, other island territories estimates</li> <li>■ Blended 2022 and 2023 FPGs</li> </ul>	Count as eligible if prior year's annual income was $\leq$ 185 percent of the Federal Poverty Guidelines.
Adjunctive income eligibility	<ul style="list-style-type: none"> <li>■ 2024 CPS ASEC</li> <li>■ 2022 and 2023 ACS</li> <li>■ 2022 and 2023 PRCS</li> </ul>	<p>Add as eligible women in families who reported participating in Medicaid, SNAP, or TANF at any point during the prior calendar year.</p> <p>For national estimates, use 2023 ACS data to impute Medicaid and SNAP participation for those who do not report participating in either program to account for CPS ASEC undercount.</p>
Adjustment for length of pregnancy	N/A	For State estimates, account for 9 months of pregnancy (0.75 factor). National-level pregnancy calculations account for pregnancy duration.
Adjustment for fluctuations in monthly income	Average of factors for 2020, 2021, and 2022 Survey of Income and Program Participation panel	<p>Adjust estimates to account for the impact of monthly fluctuations in income. Use the infants adjustment factors:</p> <ul style="list-style-type: none"> <li>■ Infants adjustment factor (used for estimates from PRCS and IDB data): 1.0015</li> <li>■ Infants adjustment factors by race and ethnicity (used for State-level estimates): <ul style="list-style-type: none"> <li>– White-only, not Hispanic: 1.0911</li> <li>– All others: 1.0000</li> </ul> </li> </ul>
Adjustment for nutritional risk	CNSTAT panel; IOM report (2002); FNS guidance	<p>Multiply pregnant women estimates by the factor to account for otherwise eligible pregnant women who might not be at nutritional risk. Estimates assume all pregnant women are at nutritional risk.</p> <p>Adjustment factor for pregnant women: 1.0000</p>

Step	Data source(s)	Methods and adjustment factors
<b>Postpartum women</b>		
Starting point	Eligible infants as estimated using methods outlined earlier in table	Use as a starting point the final average monthly eligibility estimate for infants.
Adjustment for multiple births and infant deaths	<p>Separate adjustment factors for breastfeeding and non-breastfeeding postpartum women to reflect the population:</p> <ul style="list-style-type: none"> <li>■ Breastfeeding: CDC National Vital Statistics (i.e., 2023 Births: Final Data; 2021–2023 Period Linked Birth/Infant Death Data Files) and National Vital Statistics System mortality file (2023)</li> <li>■ Non-breastfeeding: CDC National Vital Statistics (i.e., 2023 Births: Final Data, 2021–2023 Period Linked Birth/Infant Death Data Files, and 2020–2022 Fetal Death Data Files); National Vital Statistics System mortality file (2023); Abortion Surveillance data</li> </ul>	<p>Breastfeeding postpartum women: Multiply by the factors to account for the impact of multiple births and maternal, fetal, and infant deaths (so the number of breastfeeding women is not exactly equal to the number of infants).</p> <ul style="list-style-type: none"> <li>■ Breastfeeding postpartum women adjustment factors: <ul style="list-style-type: none"> <li>– Hispanic/Latino: 0.9873</li> <li>– Black-only, not Hispanic: 0.9778</li> <li>– White-only, not Hispanic: 0.9834</li> <li>– Two or more races or other race, not Hispanic: 0.9854</li> </ul> </li> </ul> <p>Non-breastfeeding postpartum women: Multiply by the factors to account for the impact of multiple births; abortions; and maternal, fetal, and infant deaths (so the number of non-breastfeeding women is not exactly equal to the number of infants).</p> <ul style="list-style-type: none"> <li>■ Non-breastfeeding postpartum women adjustment factors: <ul style="list-style-type: none"> <li>– Hispanic/Latino: 1.1361</li> <li>– Black-only, not Hispanic: 1.1752</li> <li>– White-only, not Hispanic: 1.1767</li> <li>– Two or more races or other race, not Hispanic: 1.1696</li> </ul> </li> </ul>
Adjustment for breastfeeding status	CDC NIS breastfeeding rates computed for 2019, 2020, and 2021 birth cohorts (NIS survey years 2022 and 2023)	<p>Multiply by factors to estimate the average monthly women eligible for WIC as breastfeeding women (0 &lt; 12 months postpartum) or non-breastfeeding women (&lt; 6 months postpartum). Separate State-level breastfeeding adjustments are used for the ACS data.</p> <ul style="list-style-type: none"> <li>■ Breastfeeding (used for estimates from PRCS and IDB data): 0.4800</li> <li>■ Breastfeeding by race and ethnicity (used for estimates from CPS ASEC): <ul style="list-style-type: none"> <li>– Hispanic/Latino: 0.4978</li> <li>– Black-only, not Hispanic: 0.4441</li> <li>– White-only, not Hispanic: 0.4803</li> <li>– Two or more races or other race, not Hispanic: 0.4777</li> </ul> </li> <li>■ Non-breastfeeding (used for estimates from PRCS and IDB data): 0.2236</li> <li>■ Non-breastfeeding by race and ethnicity (used for estimates from CPS ASEC): <ul style="list-style-type: none"> <li>– Hispanic/Latino: 0.2146</li> <li>– Black-only, not Hispanic: 0.2421</li> <li>– White-only, not Hispanic: 0.2247</li> <li>– Two or more races or other race, not Hispanic: 0.2214</li> </ul> </li> </ul>

Step	Data source(s)	Methods and adjustment factors
Adjustment for nutritional risk	CNSTAT panel; IOM report (2002); FNS guidance	Multiply estimates for postpartum women by the factor to account for some otherwise eligible women who may not have been at nutritional risk. Estimates assume all postpartum women were at nutritional risk. Adjustment factor for postpartum women: 1.0000

*Note:* CDC NIS breastfeeding rates are based on unpublished internal CDC data. Adjustment factors shown in this table were used to produce estimates of eligible individuals. When applicable, the same adjustment factors were used to produce estimates of the total population; because of differences in breastfeeding rates, adjustment factors differed for mothers eligible for WIC and the total population of mothers.

ACS = American Community Survey; CDC = Centers for Disease Control and Prevention; CNSTAT = Committee on National Statistics; CPS ASEC = Current Population Survey Annual Social and Economic Supplement; CY = calendar year; FNS = Food and Nutrition Service; FPG = Federal Poverty Guidelines; IDB = International Database; IOM = Institute of Medicine; N/A = not applicable; NIS = National Immunization Survey; PRCS = Puerto Rico Community Survey; SIPP = Survey of Income and Program Participation; TANF = Temporary Assistance for Needy Families

<sup>a</sup> An adjustment factor for the total number of children (1.0000) was also calculated but not used for any adjustment. The separate adjustment factors by race and ethnicity were used for the estimates.

Sources: The data sources listed in this table are as follows, in order of mention: for 2024 CPS ASEC data, see U.S. Census Bureau, n.d.-a; for 2022 and 2023 ACS and PRCS data, see IPUMS-USA, n.d.; for 2023 IDB data, see U.S. Census Bureau, n.d.-b; for 2020–2023 National Vital Statistics data, see National Center for Health Statistics, n.d.; for July 2023 postcensal population estimate data, see U.S. Census Bureau, 2024a, 2024b, 2024c; for WIC income eligibility criteria, see 7 CFR 246; for 2022 and 2023 FPG, see HHS, n.d.; for 2020–2023 SIPP data, see U.S. Census Bureau, n.d.-c; for the Committee on National Statistics panel data, see Ver Ploeg & Betson, 2003; for 2020–2023 Abortion Surveillance System data, see Ramer et al. 2023; for 2020–2023 National Vital Statistics System data on maternal mortality, see Hoyert, 2023.

**Table C.2. Estimated average monthly number of individuals eligible for WIC by participant category: CY 2023**

Participant category	Number eligible (N)	Total eligible (%)	Total population (N)	Eligibility rate (%)
<b>Infants</b>	<b>1,796,821</b>	<b>15.2</b>	<b>3,600,389</b>	<b>49.9</b>
<b>Children</b>	<b>7,626,138</b>	<b>64.5</b>	<b>14,713,756</b>	<b>51.8</b>
1-year-old children	1,883,018	15.9	3,672,400	51.3
2-year-old children	1,914,319	16.2	3,668,357	52.2
3-year-old children	1,937,138	16.4	3,619,422	53.5
4-year-old children	1,891,664	16.0	3,753,577	50.4
<b>Women</b>	<b>2,406,255</b>	<b>20.3</b>	<b>6,615,976</b>	<b>36.4</b>
Pregnant women	1,091,474	9.2	2,791,608	39.1
Postpartum women	1,314,781	11.1	3,824,368	34.4
Breastfeeding women	848,829	7.2	1,995,462	42.5
Non-breastfeeding women	465,952	3.9	1,828,907	25.5
<b>Total</b>	<b>11,829,215</b>	<b>100.0</b>	<b>24,930,121</b>	<b>47.4</b>

*Note:* The total population consists of individuals in the 50 States, the District of Columbia, Indian Tribal Organizations, and the U.S. territories served by WIC in each participant category. The number of individuals eligible for WIC includes individuals eligible through any of the 89 WIC State agencies. The eligibility rate is the ratio of the total number of individuals eligible for WIC to the total population in each participant category. The average monthly population of postpartum women includes all women who gave birth less than 1 year earlier, even if they are not categorically eligible for WIC because they are more than 6 months postpartum and are not breastfeeding.

CY = calendar year

Note: To calculate WIC eligibility in the CPS ASEC data, the age/race/Hispanic ethnicity–specific ratios were applied to the CPS ASEC weights by age/race/Hispanic ethnicity to adjust for the undercount/overcount of pregnant women in the CPS ASEC relative to the U.S. Census Population estimates. The ratios shown in the total columns (by age/race/Hispanic ethnicity) are for informational purposes only. This table does not include estimates for the U.S. territories.

<sup>a</sup> Non-Hispanic individuals who self-identified as two or more races or as Asian, American Indian/Alaska Native, or Hawaiian/Pacific Islander are included in the two or more races or other race, not Hispanic category.

CPS = Current Population Survey; CPS ASEC = CPS Annual Social and Economic Supplement

Sources: U.S. Census Bureau, n.d.-a, 2024b

**Table C.3b2. U.S. Census Bureau estimates and CPS ASEC estimates for pregnant women by year of age and race and Hispanic ethnicity: March 2024**

Note: To calculate WIC eligibility in the CPS ASEC data, the age/race/Hispanic ethnicity–specific ratios were applied to the CPS ASEC weights by age/race/Hispanic ethnicity to adjust for the undercount/overcount of pregnant women in the CPS ASEC relative to the U.S. Census Population estimates. The ratios shown in the total columns (by age/race/Hispanic ethnicity) are for informational purposes only. This table does not include estimates for the U.S. territories.

<sup>a</sup> Non-Hispanic individuals who self-identified as two or more races or as Asian, American Indian/Alaska Native, or Hawaiian/Pacific Islander are included in the two or more races or other race, not Hispanic category.

CPS = Current Population Survey; CPS ASEC = CPS Annual Social and Economic Supplement

Sources: U.S. Census Bureau, n.d.-a, 2023b

**Table C.3b3. Effects of applying population adjustment factors to population counts for pregnant women in the CPS ASEC by year of age and race and Hispanic ethnicity: March 2024**

*Note:* To calculate WIC eligibility in the CPS ASEC data, the age/race/Hispanic ethnicity–specific ratios were applied to the CPS ASEC weights by age/race/ Hispanic ethnicity to adjust for the undercount/overcount of pregnant women in the CPS ASEC estimates relative to the U.S. Census Population estimates. The ratios shown in the total columns (by age/race/Hispanic ethnicity) are for informational purposes only. This table does not include estimates for the U.S. territories.

<sup>a</sup> Non-Hispanic individuals who self-identified as two or more races or as Asian, American Indian/Alaska Native, or Hawaiian/Pacific Islander are included in the two or more races or other race, not Hispanic category.

CPS ASEC = Current Population Survey Annual Social and Economic Supplement; N/A = not applicable

Note: CPS ASEC = Current Population Survey Annual Social and Economic Supplement; CY = calendar year; FPG = Federal Poverty Guidelines; SNAP = Supplemental Nutrition Assistance Program; TANF = Temporary Assistance for Needy Families

<sup>a</sup> Adjunctive income eligibility was counted by the first program that qualified the person for WIC, in this order: SNAP, TANF, and Medicaid.

<sup>b</sup> The starting point for pregnant women is the total number of women of reproductive age (15–44 years) in the CPS ASEC. The starting point for postpartum women is the number of infants estimated to be eligible for WIC.

<sup>c</sup> See appendix D for the derivation of WIC eligibility in U.S. territories.

Note: These estimates were tabulated from the unadjusted person weights for the CPS ASEC data. They are not adjusted to account for the undercount/overcount of infants and children in the CPS ASEC relative to Vital Statistics estimates, monthly income, or nutritional risk. This table does not include estimates for the U.S. territories.

CPS ASEC = Current Population Survey Annual Social and Economic Supplement; CY = calendar year; FPG = Federal Poverty Guidelines; SNAP = Supplemental Nutrition Assistance Program; TANF = Temporary Assistance for Needy Families

<sup>a</sup> The WIC economic unit is defined as all individuals in the CPS ASEC household who are related by blood, marriage, or adoption, plus the unmarried partner of any family member and that partner's dependents. Infants and children in economic units with annual income less than or equal to 185 percent of the FPG for the unit's size are income-eligible for WIC.

<sup>b</sup> Adjunctively income-eligible infants and children were in economic units that reported participating in Medicaid, SNAP, or TANF during the prior year and had annual income exceeding 185 percent of the FPG for the unit's size.

<sup>c</sup> Non-Hispanic individuals who self-identified as two or more races or as Asian, American Indian/Alaska Native, or Hawaiian/Pacific Islander are included in the two or more races or other race, not Hispanic category.

<sup>d</sup> The military status of household members who were currently serving in the U.S. military was included on the CPS ASEC only if they resided in civilian housing on or off a military base.

Note: These estimates were tabulated from the fully adjusted person weights for the CPS ASEC data. They were adjusted to account for the undercount/overcount of infants and children in the CPS ASEC relative to Vital Statistics estimates, monthly income, or nutritional risk. This table does not include estimates for the U.S. territories.

CPS ASEC = Current Population Survey Annual Social and Economic Supplement; CY = calendar year; FPG = Federal Poverty Guidelines; SNAP = Supplemental Nutrition Assistance Program; TANF = Temporary Assistance for Needy Families

<sup>a</sup> The WIC economic unit is defined as all individuals in the CPS ASEC household who are related by blood, marriage, or adoption, plus the unmarried partner of any family member and that partner's dependents. Infants and children in economic units with annual income less than or equal to 185 percent of the FPG for the unit's size are income-eligible for WIC.

<sup>b</sup> Adjunctively income-eligible infants and children were in economic units that reported participating in Medicaid, SNAP, or TANF during the prior year and had annual income exceeding 185 percent of the FPG for the unit's size.

<sup>c</sup> Non-Hispanic individuals who self-identified as two or more races or as Asian, American Indian/Alaska Native, or Hawaiian/Pacific Islander are included in the two or more races or other race, not Hispanic category.

<sup>d</sup> The military status of household members who were currently serving in the U.S. military was included on the CPS ASEC only if they resided in civilian housing on or off a military base.

Note: These estimates were tabulated from the fully adjusted person weights for the CPS ASEC data. They were adjusted to account for the undercount/overcount of infants and children in the CPS ASEC relative to Vital Statistics estimates, monthly income, or nutritional risk. This table does not include estimates for the U.S. territories.

CPS ASEC = Current Population Survey Annual Social and Economic Supplement; CY = calendar year; FPG = Federal Poverty Guidelines; SNAP = Supplemental Nutrition Assistance Program; TANF = Temporary Assistance for Needy Families

<sup>a</sup> The WIC economic unit is defined as all individuals in the CPS ASEC household who are related by blood, marriage, or adoption, plus the unmarried partner of any family member and that partner's dependents. Infants and children in economic units with annual income less than or equal to 185 percent of the FPG for the unit's size are income-eligible for WIC.

<sup>b</sup> Adjunctively income-eligible infants and children were in economic units that reported participating in Medicaid, SNAP, or TANF during the prior year and had annual income exceeding 185 percent of the FPG for the unit's size.

<sup>c</sup> Non-Hispanic individuals who self-identified as two or more races or as Asian, American Indian/Alaska Native, or Hawaiian/Pacific Islander are included in the two or more races or other race, not Hispanic category.

<sup>d</sup> The military status of household members who were currently serving in the U.S. military was included on the CPS ASEC only if they resided in civilian housing on or off a military base.

Non-breastfeeding women	25.4	25.5	0.2
<b>Total</b>	<b>46.7</b>	<b>47.4</b>	<b>1.7</b>

Note: The average monthly population of postpartum women includes all women who gave birth less than 1 year earlier, even if they are not categorically eligible for WIC because they are more than 6 months postpartum and are not breastfeeding.

CPS ASEC = Current Population Survey Annual Social and Economic Supplement; CY = calendar year

\* Indicates a statistically significant difference between the 2022 and 2023 estimates of individuals eligible for WIC or WIC eligibility rate at the 95 percent confidence level. The statistical significance testing was conducted on the 2022–2023 change in WIC eligibility based on the CPS ASEC, which included data only for States. It did not include data for the U.S. territories served by WIC.

# Appendix D

## Detailed Tables for Regional- and State-Level WIC Estimates: CY 2023

This appendix presents detailed estimates of individuals eligible for WIC and coverage rates by FNS Region and State for 2023, including comparisons over time in coverage rates by race and Hispanic ethnicity and by participant category.

### **Policy and National Events Influencing WIC Operations, Eligibility, and Program Reach**

Several external factors and WIC policy changes influenced WIC program operations in 2023. These changes may influence the estimates and trends presented in this report. For example—

- In February 2022, an infant formula recall led to a national formula shortage. Combined with supply chain issues, the formula shortage continued in 2023, leading to shifts in how infants were fed across the Nation (Economic Research Service, 2024). Breastfeeding practices directly affect who is eligible for WIC and what benefits postpartum women and infants receive.
- In FY 2023, Congress continued to fund an increase to the cash value benefit (CVB) that WIC participants use to purchase fruits and vegetables. Although the FY 2023 CVB levels were only modestly adjusted for inflation above the increased CVB funded in FY 2022, this rise may still have had continued impacts on participation extending into 2023.
- The country continued to deal with challenges related to the COVID-19 public health emergency (PHE). Poverty remained relatively high, although some measures suggest a slight increase in family incomes. Medicaid and SNAP participation also continued at high levels, although these programs began “unwinding” COVID-19 flexibilities that temporarily increased enrollment. Some WIC clinics began shifting back to pre-COVID policies, while others continued to waive physical presence requirements and issued benefits electronically in an effort to modernize the program. The impact of WIC waivers may have varied across State agencies with different policies. For example, some State agencies used offline EBT technology that did not allow for remote benefit issuance, while others had online systems that allowed them to issue benefits remotely.

A list of the seven FNS Regions and the State agencies included in each FNS Region in 2023 follows. Participants from the Tribal Organizations are included in the estimates for the FNS Region and geographic State associated with the Tribal Organization.

**Table D.1. Number of individuals eligible for WIC, number participating, and coverage rate by State and FNS Region: CY 2023**

This table shows the estimated number of individuals eligible for WIC, the number of individuals participating in WIC, and the resulting coverage rates by State and FNS Region.

**Table D.2. Number of individuals eligible for WIC, number participating, and coverage rate by FNS Region and States in each Region: CY 2023**

This table shows the estimated number of individuals eligible for WIC, the number of individuals participating in WIC, and the resulting coverage rates by FNS Region and the States within each FNS Region.

**Table D.3. Number of individuals eligible for WIC, number participating, and coverage rate by FNS Region and participant category: CY 2023**

This table shows the estimated number of individuals eligible for WIC, the number of individuals participating in WIC, and the resulting coverage rates by FNS Region and participant category.

**Table D.4. Standard errors and coefficients of variation for estimated number of individuals eligible for WIC by State and FNS Region: CY 2023**

This table shows the estimated number of individuals eligible for WIC and the associated standard errors and coefficients of variation by State and FNS Region. The coefficient of variation is the ratio of the standard error to the eligibility estimate.

#### **Table D.5. Standard errors and coefficients of variation for estimated number of individuals eligible for WIC by FNS Region and States in each Region: CY 2023**

This table shows the estimated number of individuals eligible for WIC and the associated standard errors and coefficients of variation by FNS Region and the States within each FNS Region.

#### **Table D.6. Standard errors and coefficients of variation for estimated number of individuals eligible for WIC by FNS Region and participant category: CY 2023**

This table shows the estimated number of individuals eligible for WIC and the associated standard errors and coefficients of variation by FNS Region and participant category.

#### **Tables D.7a and D.7b. Adjustments for calculating the average monthly number of individuals eligible for WIC in Puerto Rico and the other U.S. territories by participant category: CY 2023**

Analogous to table C.5 of the national estimates, this table shows the step-by-step adjustments made to calculate the final numbers of infants, children, and pregnant and postpartum women who were eligible for WIC in Puerto Rico (table D.7a) and the other U.S. territories (table D.7b) based on the PRCS data for Puerto Rico (IPUMS-USA, n.d.) and the U.S. Census Bureau population estimates for the other territories (U.S. Census Bureau, n.d.-b).

#### **Table D.8. Regional estimates of the average monthly numbers of infants and children eligible for WIC by demographic and income characteristics (fully adjusted weights, percentages): CY 2023**

This table shows the estimated numbers of infants and children eligible for WIC by demographic and income characteristics in the CPS ASEC and ACS data by FNS Region (IPUMS-USA, n.d.; U.S. Census Bureau, n.d.-a). It is similar to table C.6 but shows the data by FNS Region and does not show results for children by year of age. This table does not include infants and children from the U.S. territories. This table shows these characteristics using weights that have been fully adjusted, including adjustments for the undercount/overcount in the CPS (population adjustment), monthly income and certification periods (annual-to-monthly adjustment), and nutritional risk.

#### **Tables D.9a–D.9f. WIC coverage rate by State: CY 2016–CY 2023**

This series of tables shows WIC coverage rates and the associated coefficients of variation by State and year for CY 2016–CY 2023. Table D.9a presents coverage rates for all participants. Tables D.9b through D.9f show coverage rates for each participant category.

#### **Table D.10. WIC coverage rate by State and participant category with coefficients of variation: CY 2023**

This table shows the coverage rates by State and participant category and the associated coefficients of variation.

**Table D.11. State-level WIC coverage rate by race and Hispanic ethnicity with coefficients of variation: CY 2023**

This table shows the State-level coverage rates by race and Hispanic ethnicity and the associated coefficients of variation.

**Table D.12. State-level WIC coverage rate (percentage) for children by race and Hispanic ethnicity: CY 2023**

This table shows the State-level coverage rates for children by race and Hispanic ethnicity.<sup>8</sup>

**Table D.1. Number of individuals eligible for WIC, number participating, and coverage rate by State and FNS Region: CY 2023**

State/FNS Region	Number eligible	Number participating	Coverage rate (%)
State			
Alabama	217,424	111,698	51.4*
Alaska	27,897	14,037	50.3*

<b>Total</b>	<b>11,829,215</b>	<b>6,631,309</b>	<b>56.1</b>

Note: State and FNS Region eligibility estimates and participant data include individuals in ITOs who were eligible for WIC or receiving WIC. Estimates for U.S. territories other than Puerto Rico are included in regional totals but not shown separately because of constraints related to small sample size.

CPS ASEC = Annual Social and Economic Supplement of the Current Population Survey; CY = calendar year; FNS = Food and Nutrition Service; ITO = Indian Tribal Organization; PRCS = Puerto Rico Community Survey

\* Indicates a statistically significant difference between the State or regional coverage rate and the national coverage rate at the 95 percent confidence level. The statistical significance testing was conducted based on the CPS ASEC and PRCS data, which included data only for the States and Puerto Rico. It did not include data for the other U.S. territories served by WIC.

Note: These estimates were tabulated from the fully adjusted person weights for the CPS ASEC data. They were adjusted to account for the undercount/overcount of infants and children in the CPS relative to Vital Statistics estimates, monthly income, or nutritional risk. This table does not include estimates for the U.S. territories.

CPS = Current Population Survey; CPS ASEC = CPS Annual Social and Economic Supplement; CY = calendar year; FPG = Federal Poverty Guidelines; SNAP = Supplemental Nutrition Assistance Program; TANF = Temporary Assistance for Needy Families

<sup>a</sup> Non-Hispanic individuals who self-identified as two or more races or as Asian, American Indian/Alaska Native, or Hawaiian/Pacific Islander are included in the two or more races or other race, not Hispanic category.

<sup>b</sup> The military status of household members who were currently serving in the U.S. military was included on the CPS ASEC only if they resided in civilian housing on or off a military base.

Note: The point estimates for CY 2016–CY 2020 are consistent with the results published in the CY 2021 report (Kessler et al., 2023) but differ from initial results published for those years because of updates to the methodology.

COV = coefficient of variation; CY = calendar year

Note: The point estimates for CY 2016–CY 2020 are consistent with the results published in the CY 2021 report (Kessler et al., 2023) but differ from initial results published for those years because of updates to the methodology.

COV = coefficient of variation; CY = calendar year

† Indicates an unreliable coverage rate over 100 percent

Note: Coverage rate estimates for Puerto Rico are included in the totals but are not shown separately because of small sample sizes. The COV is defined as the ratio of the standard error to the eligibility estimate. The larger the COV in relation to the size of the estimate, the less reliable the estimate. See appendix B for more details on statistical uncertainty for these estimates.

COV = coefficient of variation; CY = calendar year

† Indicates an unreliable coverage rate over 100 percent

See appendix B for more details on statistical uncertainty for these estimates.

COV = coefficient of variation; CY = calendar year

<sup>a</sup> This category includes non-Hispanic individuals who self-identified as two or more races or as a race other than White. These categories were combined because of sample size concerns.

\* Indicates a statistically significant difference at the 95 percent confidence level between the coverage rate for a participant's race/ethnicity and the national coverage rate for that category

† Indicates an unreliable coverage rate over 100 percent or a coverage rate where the lower bound of the 95 percent confidence interval is below 0 percent and the upper bound is over 100 percent

# Appendix E

## FNS Regional- and State-Level Maps of WIC Coverage Rates: CY 2023

This appendix provides maps of WIC coverage rates at the regional and State levels. Coverage rates are the percentages of women, infants, and children eligible for WIC who receive WIC benefits. This appendix includes maps that show coverage rates for all eligible individuals and for each of the four participant categories—infants, children, pregnant women, and postpartum women. This appendix also includes maps that show State-level coverage rates for three race and ethnicity categories: Hispanic/Latino; White-only, non-Hispanic; and other than White-only, non-Hispanic.<sup>9</sup>

### **Policies and National Events Influencing WIC Operations, Eligibility, and Program Reach**

- In February 2022, an infant formula recall led to a national formula shortage. Combined with supply chain issues, the formula shortage continued in 2023, leading to shifts in how infants were fed across the Nation (Economic Research Service, 2024). Breastfeeding practices directly affect who is eligible for WIC and what benefits postpartum women and infants receive.
- In FY 2023, Congress continued to fund an increase to the cash value benefit (CVB) that WIC participants use to purchase fruits and vegetables. Although the FY 2023 CVB levels were only modestly adjusted for inflation above the increased CVB funded in FY 2022, this rise may still have had continued impacts on participation extending into 2023.
- The country continued to deal with challenges related to the COVID-19 public health emergency (PHE). Poverty remained relatively high, although some measures suggest a slight increase in family incomes. Medicaid and SNAP participation also continued at high levels, although these programs began “unwinding” COVID-19 flexibilities that temporarily increased enrollment. Some WIC clinics began shifting back to pre-COVID policies, while others continued to waive physical presence requirements and issued benefits electronically in an effort to modernize the program. The impact of WIC waivers may have varied across State agencies with different policies. For example, some State agencies used offline EBT technology that did not allow for remote benefit issuance, while others had online systems that allowed them to issue benefits remotely.

<sup>9</sup> The Black-only, non-Hispanic and two or more races or other race, non-Hispanic categories were combined because of sample size concerns. This category includes Black-only, non-Hispanic individuals and non-Hispanic individuals who self-identified as two or more races or as Asian, American Indian/Alaska Native, or Hawaiian/Pacific Islander.

A list of the maps follows:

#### **FNS Regional-Level Coverage Rates**

- E.1. Total
- E.2. Infants
- E.3. Children
- E.4. Pregnant women
- E.5. Postpartum women

#### **State-Level Coverage Rates by Participant Category**

- E.6. Total
- E.7. Infants
- E.8. Children
- E.9. Pregnant women
- E.10. Postpartum women

Estimates for the U.S. territories are included in the national totals but are not shown separately because of small sample sizes. Estimates for Puerto Rico are displayed in figure E.6 only.

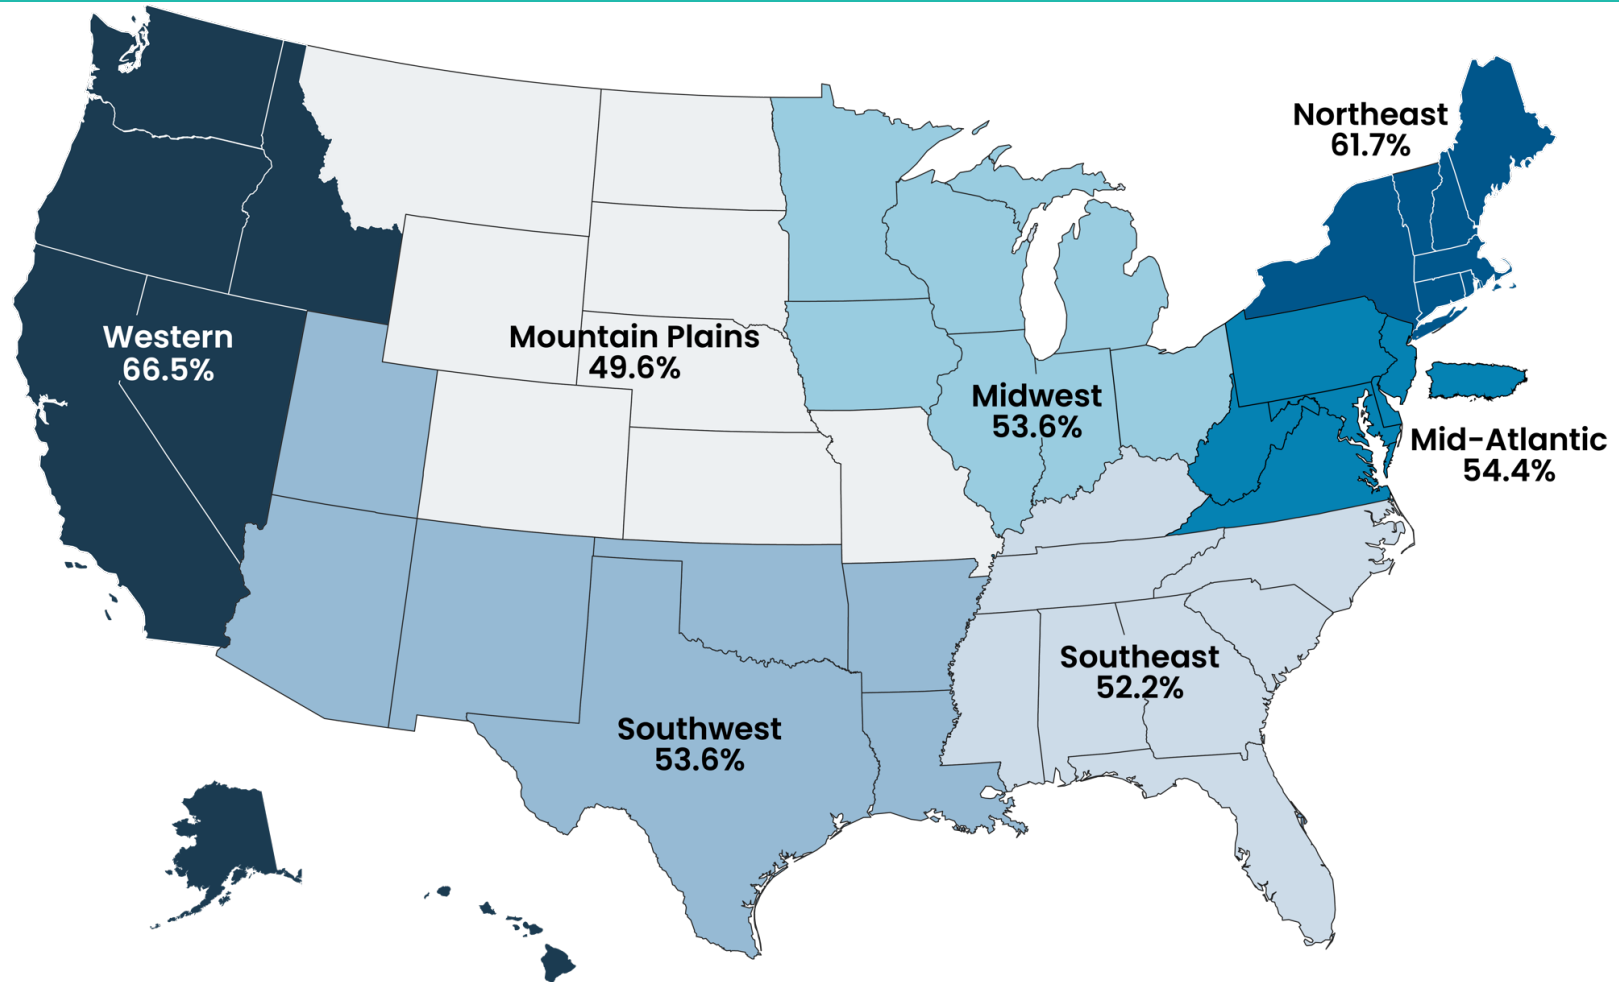

#### **State-Level Coverage Rates by Race and Hispanic Ethnicity**

- E.11. Hispanic/Latino
- E.12. White-only, not Hispanic
- E.13. Other than White-only, not Hispanic

Estimates for U.S. territories other than Puerto Rico are not included in national totals because the IDB data did not include information on race and Hispanic ethnicity. Estimates for Puerto Rico are included in the national totals but are not shown separately because of small sample sizes.

# Appendix F

## Data for Figures in Volumes I and II

This appendix includes the data used for figures and maps presented in this report.

### **Policy and National Events Influencing WIC Operations, Eligibility, and Program Reach**

Several external factors and WIC policy changes influenced WIC program operations in 2023. These changes may influence the estimates and trends presented in this report. For example—

- In February 2022, an infant formula recall led to a national formula shortage. Combined with supply chain issues, the formula shortage continued in 2023, leading to shifts in how infants were fed across the Nation (Economic Research Service, 2024). Breastfeeding practices directly affect who is eligible for WIC and what benefits postpartum women and infants receive.
- In FY 2023, Congress continued to fund an increase to the cash value benefit (CVB) that WIC participants use to purchase fruits and vegetables. Although the FY 2023 CVB levels were only modestly adjusted for inflation above the increased CVB funded in FY 2022, this rise may still have had continued impacts on participation extending into 2023.
- The country continued to deal with challenges related to the COVID-19 public health emergency (PHE). Poverty remained relatively high, although some measures suggest a slight increase in family incomes. Medicaid and SNAP participation also continued at high levels, although these programs began “unwinding” COVID-19 flexibilities that temporarily increased enrollment. Some WIC clinics began shifting back to pre-COVID policies, while others continued to waive physical presence requirements and issued benefits electronically in an effort to modernize the program. The impact of WIC waivers may have varied across State agencies with different policies. For example, some State agencies used offline EBT technology that did not allow for remote benefit issuance, while others had online systems that allowed them to issue benefits remotely.

**Table F.1. Number of individuals eligible for WIC by participant category: CY 2016–CY 2023**

Participant category	2016	2017	2018	2019	2020	2021	2022	2023
Infants	2,162,700	2,139,130	1,998,988	1,900,491	1,862,033	1,846,394	1,830,448	1,796,821

<b>Total</b>	<b>82.3</b>	<b>47.9</b>	<b>67.4</b>	<b>52.5</b>	<b>45.2</b>	<b>26.9</b>	<b>49.3</b>	<b>72.8</b>	<b>56.1</b>

Note: Estimates for the U.S. territories are included in the total but are not shown separately because of small sample sizes. Estimates of State-level coverage rates by year of age for children and other participant categories should be viewed with caution because of the small sample sizes for many States. See appendix B for more details on statistical uncertainty for these estimates. State and FNS Region eligibility estimates and participant data include individuals in ITOs who were eligible for WIC.

CY = calendar year; FNS = Food and Nutrition Service; ITO = Indian Tribal Organization

<sup>†</sup> Indicates an unreliable coverage rate over 100 percent

Note: Estimates for U.S. territories other than Puerto Rico are not included in the calculation of the coverage rates in this table because information on race and ethnicity was not available for the other U.S. territories in the data.

CY = calendar year

<sup>a</sup> Non-Hispanic individuals who self-identified as two or more races or as Asian, American Indian/Alaska Native, or Hawaiian/Pacific Islander are included in the two or more races or other race, not Hispanic category.

\* Indicates a statistically significant difference at the 95 percent confidence level between the coverage rate for a participant category's race and ethnicity and the national coverage rate for that category

Note: Estimates for Puerto Rico are included in the totals but not shown separately because of small sample sizes. Estimates for U.S. territories other than Puerto Rico are not included in the calculation of the coverage rates in this table because information on race and ethnicity was not available for the other U.S. territories in the data.

CY = calendar year

<sup>a</sup> This category includes non-Hispanic individuals who self-identified as two or more races or as a race other than White. These categories were combined because of sample size concerns.

\* Indicates a statistically significant difference at the 95 percent confidence level between the State coverage rate for a participant category's race and ethnicity and the national coverage rate for that category

† Indicates an unreliable coverage rate over 100 percent or a coverage rate where the lower bound of the 95 percent confidence interval is below 0 percent and the upper bound is over 100 percent

**Table F.9. WIC coverage rate (percentage) by participant category and race and Hispanic ethnicity with coefficients of variation: CY 2023**

Participant category	Hispanic/Latino		Black-only, not Hispanic		White-only, not Hispanic		Two or more races or other race, not Hispanic <sup>a</sup>		Total	
	Rate	COV	Rate	COV	Rate	COV	Rate	COV	Rate	COV
Infants	90.1	5.0	99.4	10.9	69.3	7.4	66.4	13.5	82.4	3.9
Children	58.4	2.3	40.3	3.5	42.1	2.8	45.5	5.8	47.9	1.5
Pregnant women	57.7	1.6	46.8	2.3	44.7	1.9	38.9	3.5	49.4	1.1
Postpartum women	81.8	5.0	84.6	10.9	65.1	7.4	46.7	13.5	72.9	3.9
<b>Total</b>	<b>66.0</b>	<b>2.0</b>	<b>52.8</b>	<b>3.2</b>	<b>49.2</b>	<b>2.9</b>	<b>48.6</b>	<b>5.5</b>	<b>56.1</b>	<b>1.4</b>

Note: Estimates for U.S. territories other than Puerto Rico are not included in the calculation of the coverage rates in this table because information on race and ethnicity was not available for the other U.S. territories in the data. The coefficient of variation is defined as the ratio of the standard error to the eligibility estimate. This table does not include estimates for the U.S. territories other than Puerto Rico.

COV = coefficient of variation; CY = calendar year

<sup>a</sup> Non-Hispanic individuals who self-identified as two or more races or as Asian, American Indian/Alaska Native, or Hawaiian/Pacific Islander are included in the two or more races or other race, not Hispanic category.

Sources: FNS, 2024; IPUMS-USA, n.d.; U.S. Census Bureau, n.d.-a; Zvavitch et al., 2024

**Table F.10. WIC coverage rate (percentage) by race and Hispanic ethnicity: CY 2016–CY 2023**

Year	Hispanic/Latino	Black-only, not Hispanic	White-only, not Hispanic	Two or more races or other race, not Hispanic <sup>a</sup>	Total
2016	65.2	56.6	44.0	49.1	54.2
2017	61.3	55.6	44.1	44.1	52.3
2018	60.1	55.2	45.4	50.8	53.2
2019	61.8	56.8	41.6	50.1	52.3
2020	62.8	54.1	41.8	48.6	52.0
2021	58.1	48.5	44.2	55.7	51.2
2022	63.0	49.1	45.9	52.6	53.5
2023	66.0	52.8	49.2	48.6	56.1

Note: Estimates for U.S. territories other than Puerto Rico are not included in the calculation of the coverage rates in this table because information on race and ethnicity was not available for the other U.S. territories.

CY = calendar year

<sup>a</sup> Non-Hispanic individuals who self-identified as two or more races or as Asian, American Indian/Alaska Native, or Hawaiian/Pacific Islander are included in the two or more races or other race, not Hispanic category.
